RE: Proposed TL-6975 Project, Cities of San Marcos and Escondido; San Marcos, Rancho Santa Fe, Escondido and Valley Center USGS Quadrangles, San Diego County, California

Dear Mr. McGinnis:

Attached is a list of tribes that have cultural and traditional affiliation to the areas of potential project effect (APE) referenced above. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult, as may be required under particular state statutes. If a response has not been received within two weeks of notification, the Native American Heritage Commission (NAHC) requests that you follow-up with a telephone call to ensure that the project information has been received.

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* (SLF) was completed for the area of potential project effect (APE) for the above referenced project. Sites have been located within the APEs you provided that may be impacted by the project. Please immediately contact the San Luis Rey Band of Mission Indians at (760) 724-8505 and the San Pasqual Band of Diegueno Mission Indians at (760) 749-3200 for more information about these sites.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

A handwritten signature in blue ink, appearing to read "Gayle Totton".

Pauma Valley, CA 92061

Subject: SDG&E TL 6975 Project, San Diego County

Dear Chairperson Temet Aguilar:

SDG&E is in the design phase of a proposed project to construct and operate a new, approximately 12-mile 69 kV transmission line (TL 6975) between the existing SDG&E Escondido and San Marcos Substations. This work will require reconductoring the existing de-energized 138kV transmission line (TL 99911) from the Escondido substation travelling west to Meadowlark Junction. A new transmission line is proposed to run parallel the existing 138kV line (TL 13825/ TL 13811) northwest from Meadowlark substation to San Marcos Boulevard. Finally, TL 680C will be intercepted at San Marcos Boulevard and double circuited overhead east to Viewpoint Drive where the remaining portion of double circuited TL 680C will travel to San Marcos substation is proposed for underground service. ICF is contracted by SDG&E to provide environmental technical and permitting support for SDG&E's application for a Permit to Construct the proposed project, as required by the California Public Utilities Commission's (CPUC) California Environmental Quality Act (CEQA) Information and Criteria List, as well as the CPUC's requirements for the Permit to Construct, pursuant to General Order 131-D. CPUC is the lead agency for complying with CEQA.

The records search for the cultural study indicated that cultural resources have been previously documented in the vicinity of the proposed project, and there are previously documented cultural resources within the project footprint. No known cemeteries exist however, there are recorded Native American or other human remains identified adjacent to the project area. A recent record search of the Native American Heritage Commission (NAHC) Sacred Lands Files indicated the presence of Native American sites within the proposed project area. Further, intensive pedestrian surveys conducted for the proposed project identified cultural resources within the proposed project area.

As there are previously recorded cultural resources located near project activities and construction of the proposed substation would include ground disturbance that could expose previously undiscovered archaeological resources, monitoring by a qualified archaeologist and Native American monitor will occur during vegetation removal or ground-disturbing activities for the project.

If grading or road improvements are to be conducted along existing access roads that contain unevaluated or National Register of Historic Places- or California Register of Historic Resources-

Temet Aguilar, Chairperson
March 30, 2017
Page 2 of 2

eligible resources, monitoring will occur where the access road crosses the site or is located within the boundaries of a site. If surface expressions of the site (i.e. artifacts) are present within the road, equipment blades will be lifted when traversing the site. Additionally, all vehicles will remain on existing dirt roads and/or new access identified for the Proposed Project. If needed, additional overland travel or access routes will be reviewed by SDG&E's cultural resource specialist, and appropriate avoidance measures and monitoring will be implemented.

Known cultural resources that can be avoided will be demarcated as Environmentally Sensitive Areas (ESAs). Construction crews will be instructed to avoid disturbance of these areas. A qualified archaeological monitor will monitor ground-disturbing activities in the vicinity of all ESAs and areas determined to have a high potential for buried cultural deposits within the Proposed Project area. Native American monitoring will be implemented for portions of the Proposed Project that have the potential to impact identified and mapped traditional locations or places. The role of the Native American monitor will be to observe project construction in mapped sensitive areas and facilitate communication of tribal concerns to the archaeologist and/or construction personnel and tribal council.

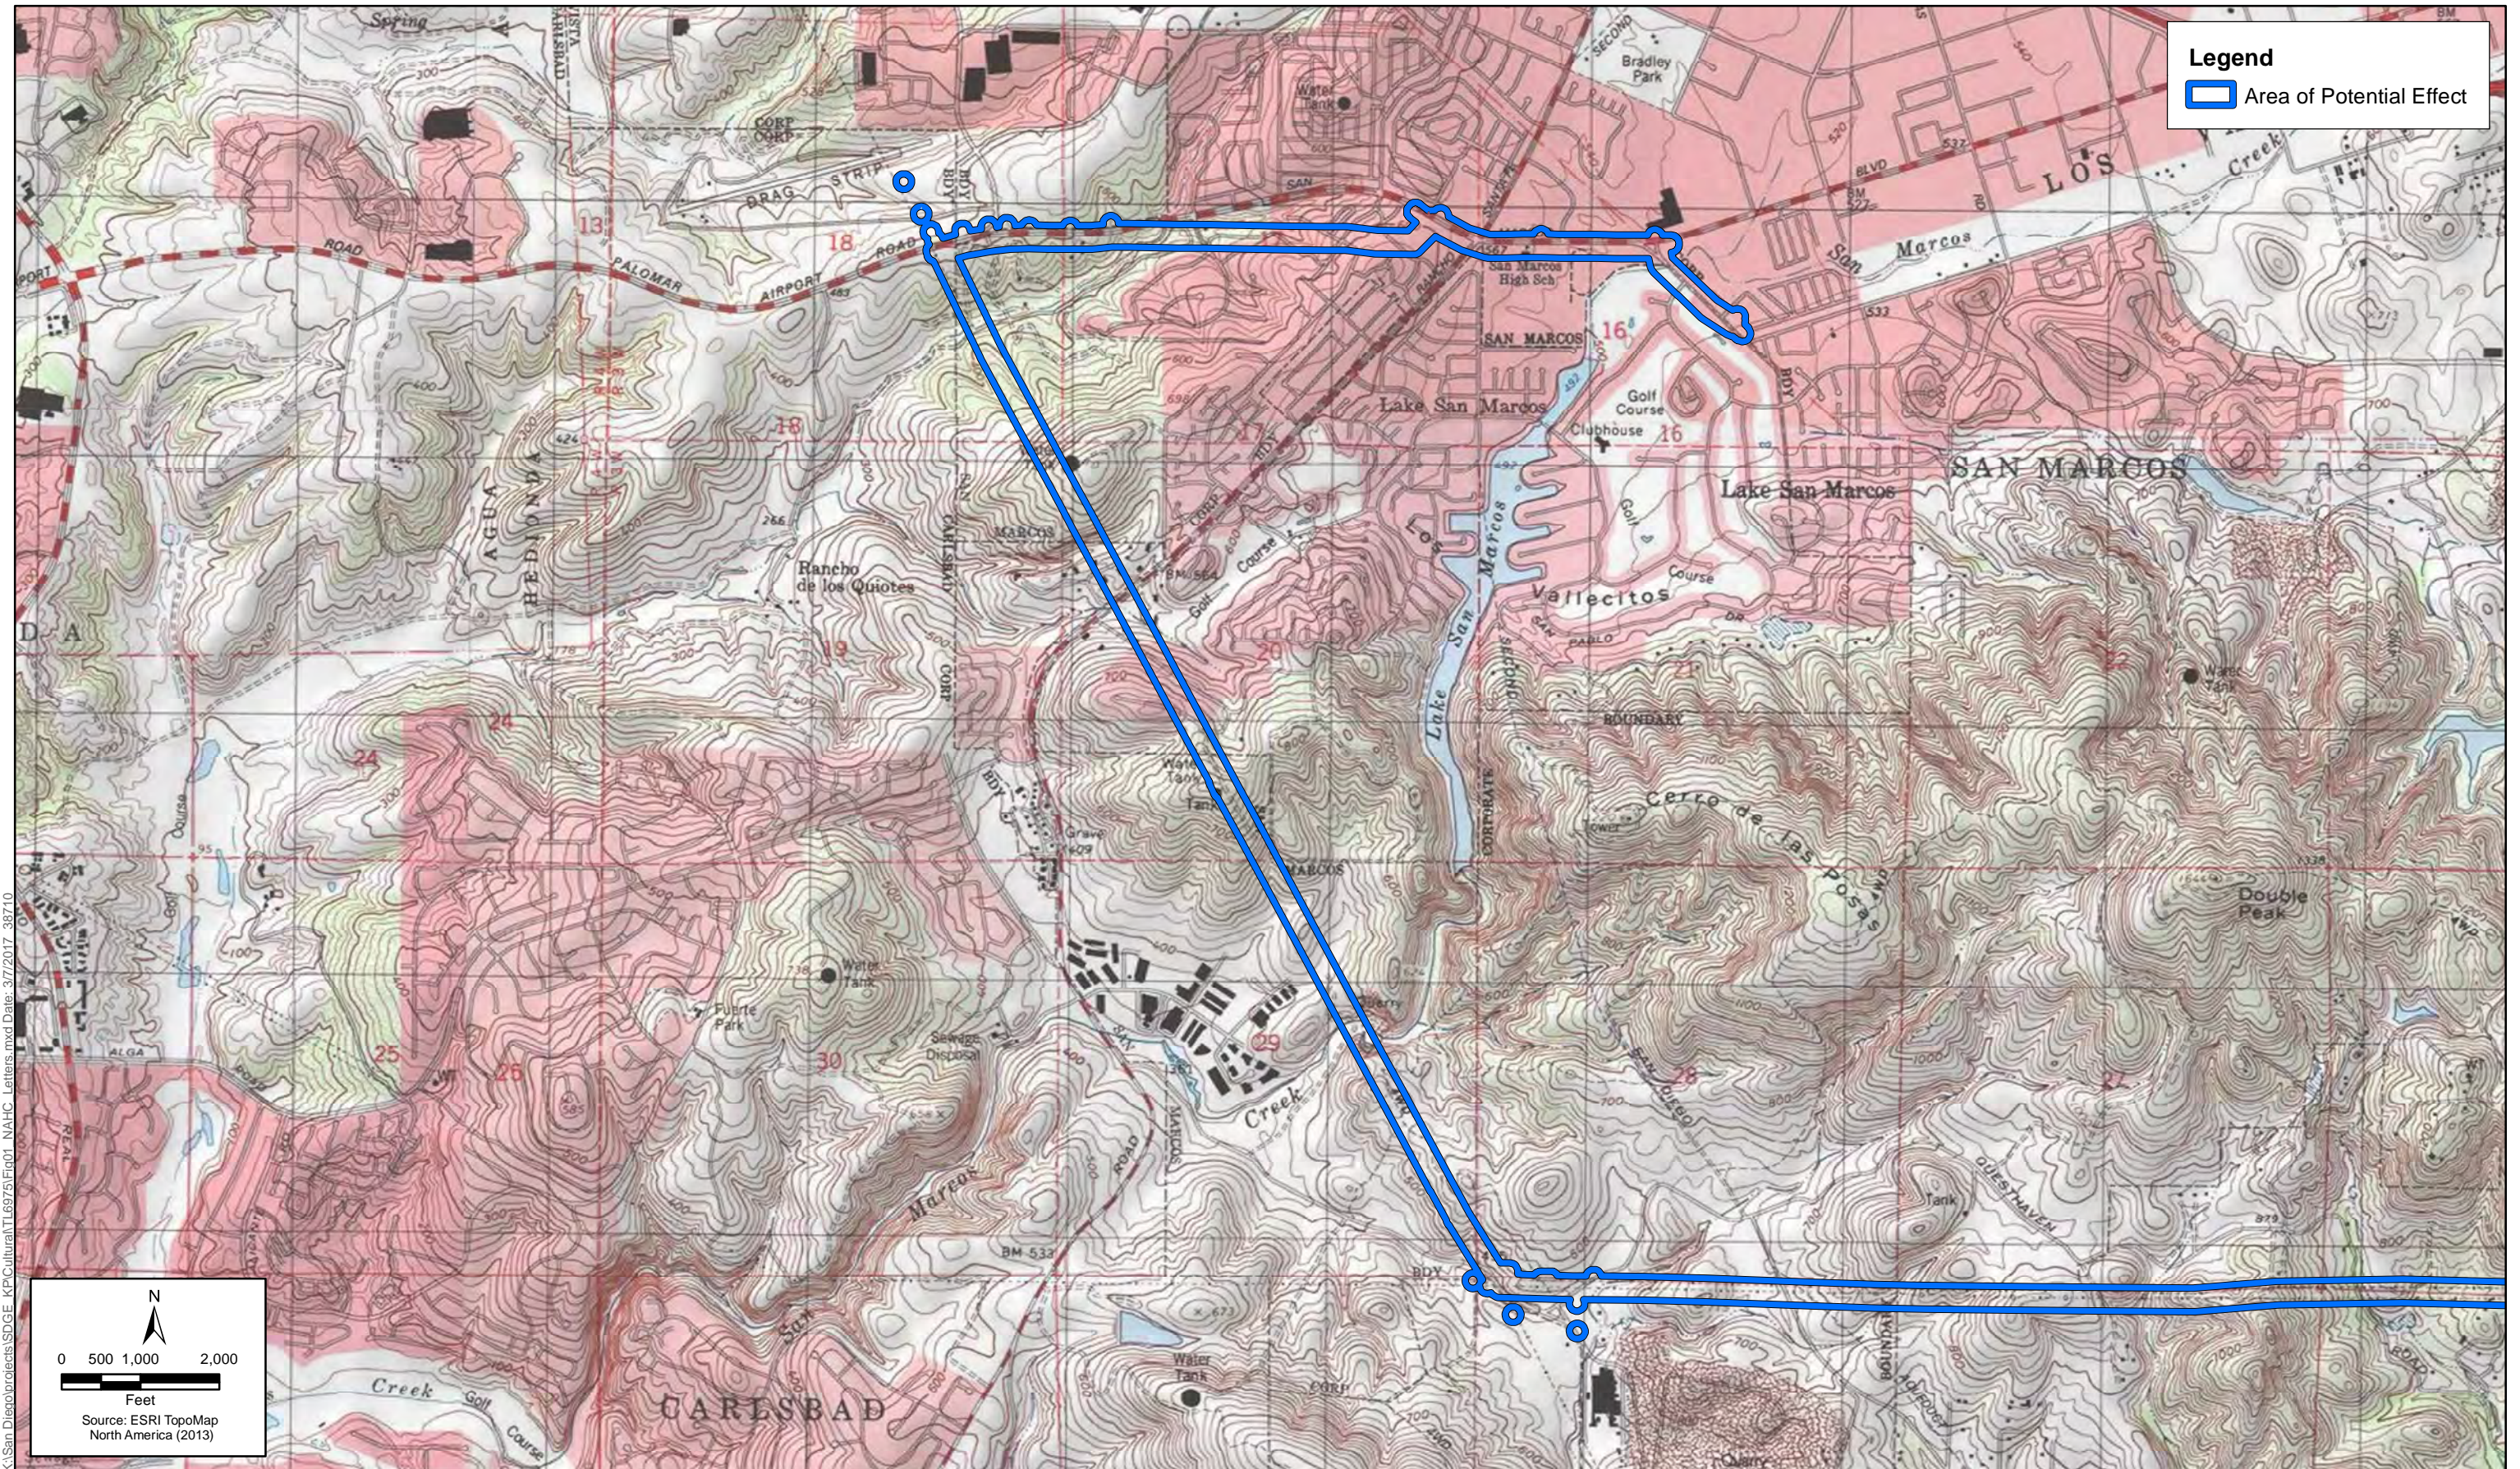

Attached please find a project map. Should have any comments, questions or concerns please don't hesitate to contact me patrick.mcginis@icf.com or telephone me at 858 444-3947.

Respectfully,

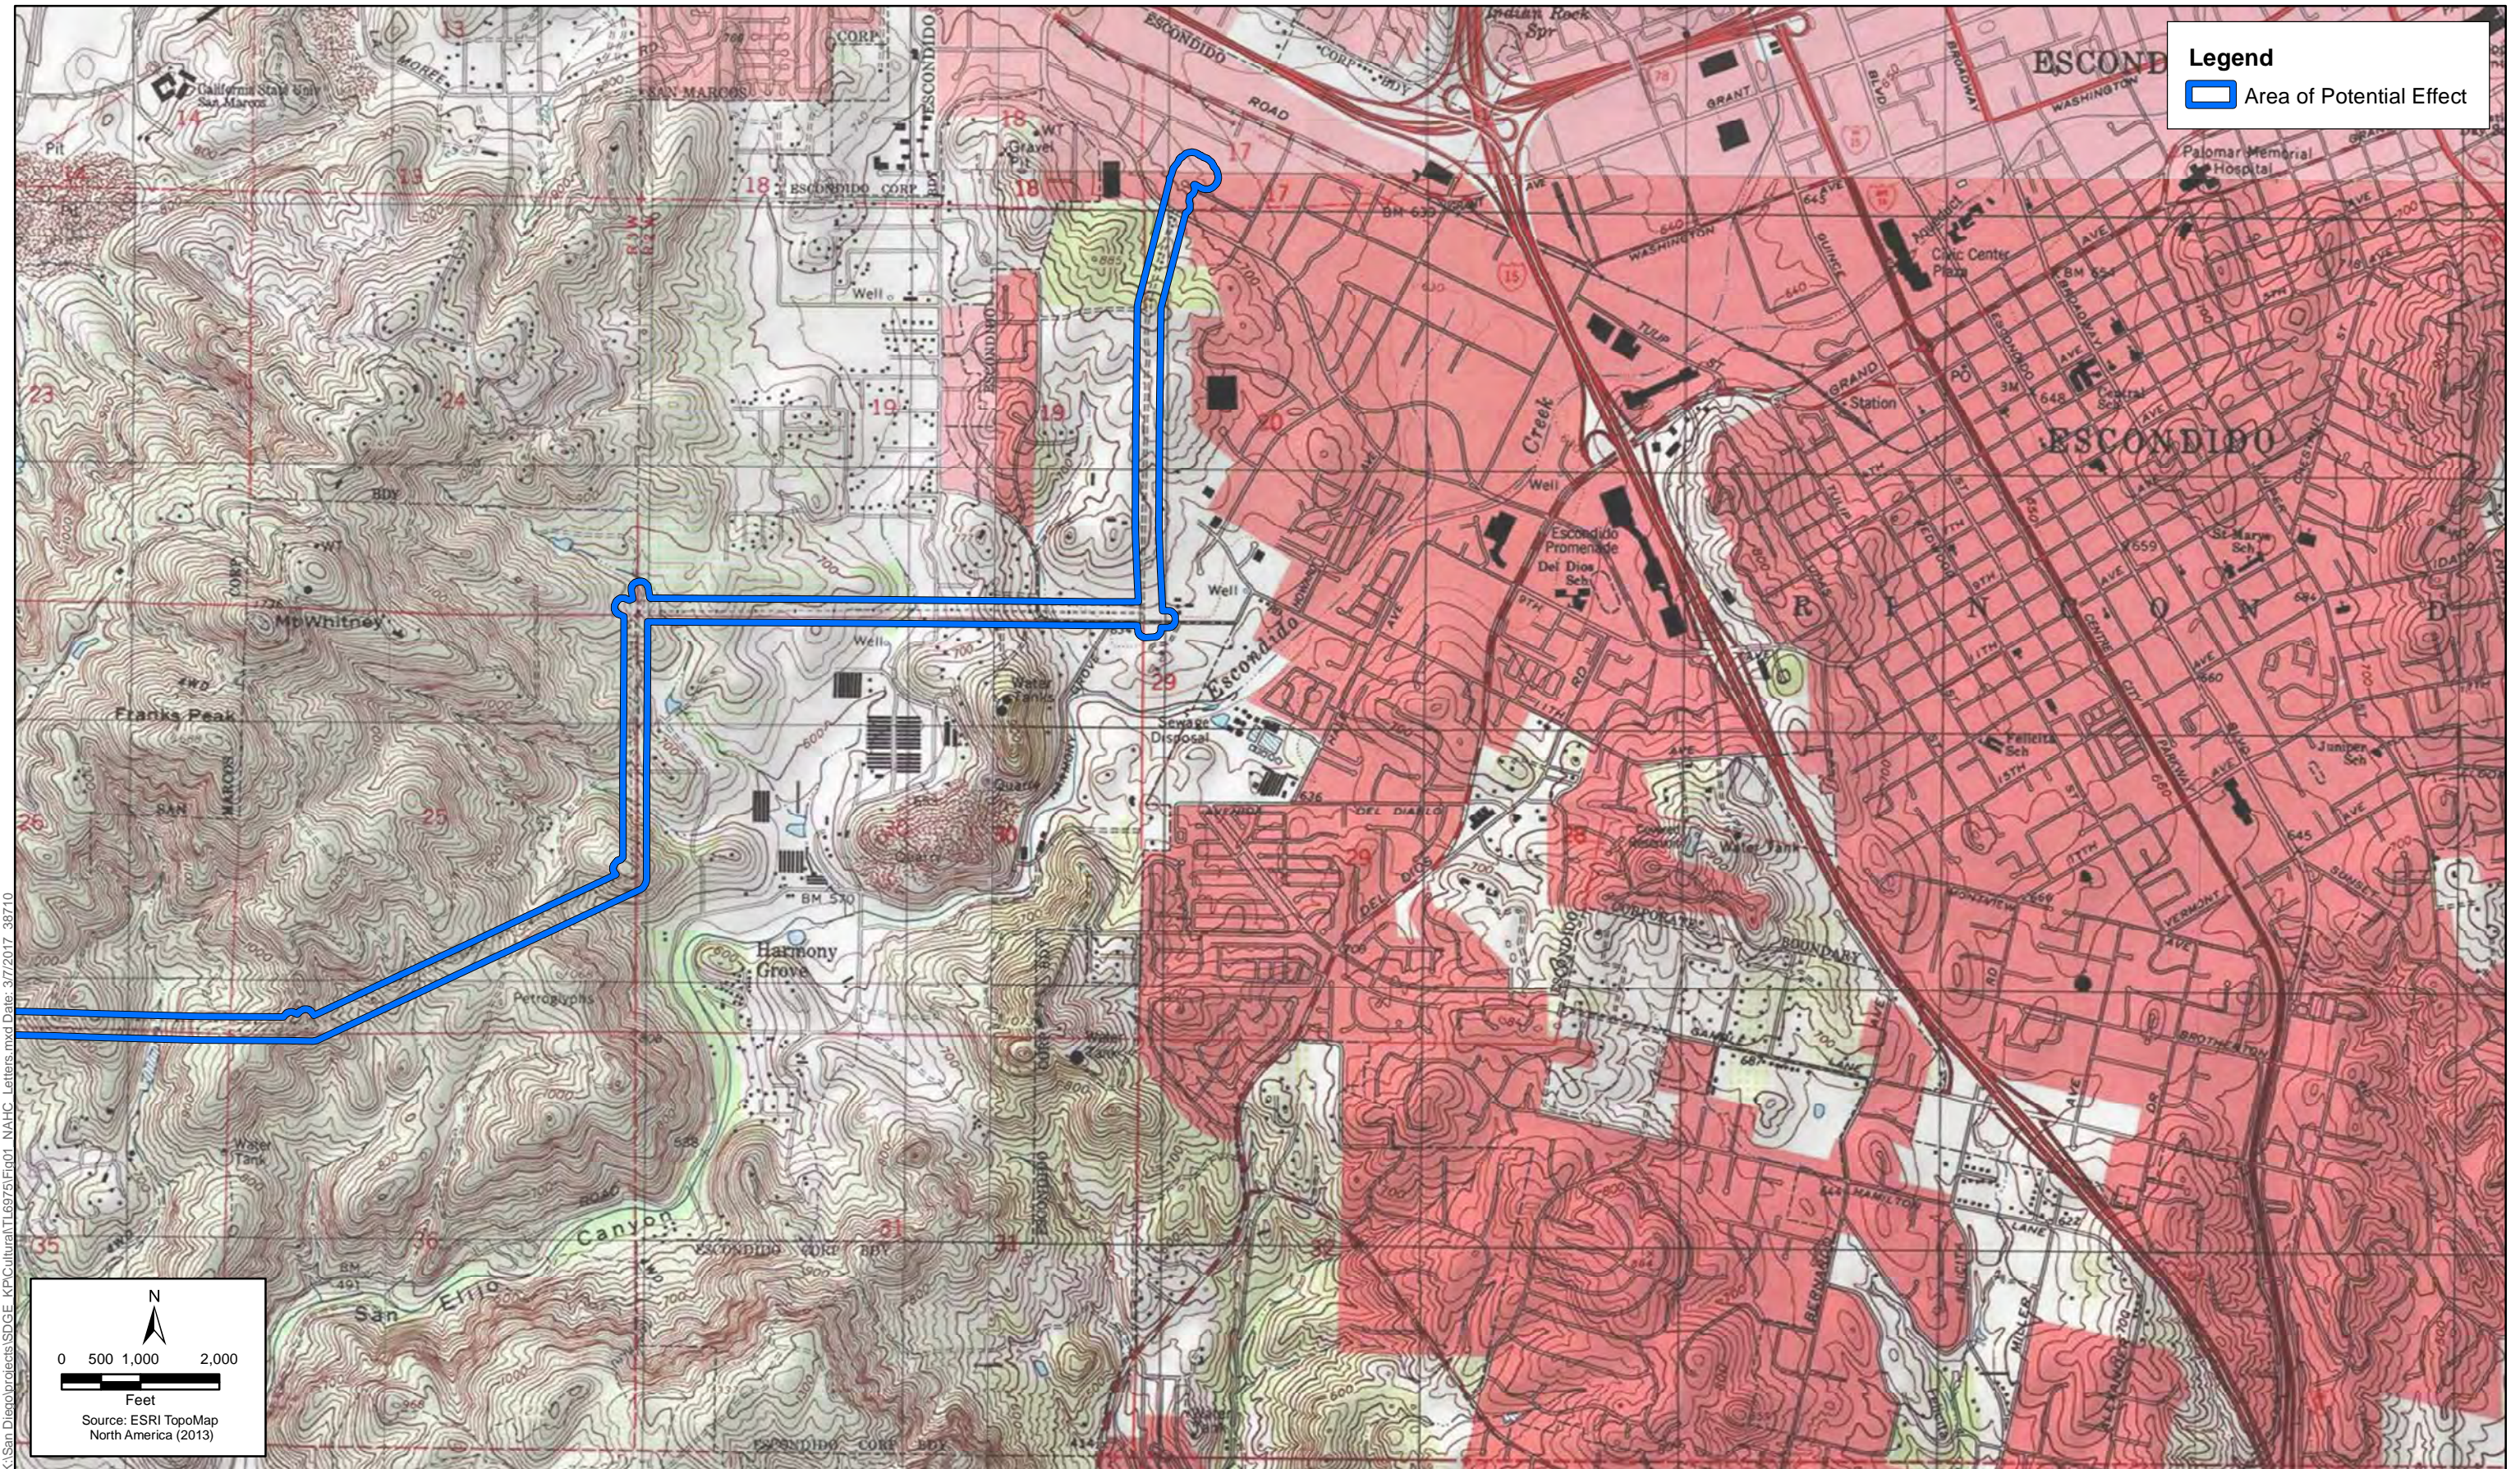

A handwritten signature in dark ink, reading "Patrick McGinnis". The signature is written in a cursive style. To the right of the signature is a vertical yellow line.

eligible resources, monitoring will occur where the access road crosses the site or is located within the boundaries of a site. If surface expressions of the site (i.e. artifacts) are present within the road, equipment blades will be lifted when traversing the site. Additionally, all vehicles will remain on existing dirt roads and/or new access identified for the Proposed Project. If needed, additional overland travel or access routes will be reviewed by SDG&E's cultural resource specialist, and appropriate avoidance measures and monitoring will be implemented.

Known cultural resources that can be avoided will be demarcated as Environmentally Sensitive Areas (ESAs). Construction crews will be instructed to avoid disturbance of these areas. A qualified archaeological monitor will monitor ground-disturbing activities in the vicinity of all ESAs and areas determined to have a high potential for buried cultural deposits within the Proposed Project area. Native American monitoring will be implemented for portions of the Proposed Project that have the potential to impact identified and mapped traditional locations or places. The role of the Native American monitor will be to observe project construction in mapped sensitive areas and facilitate communication of tribal concerns to the archaeologist and/or construction personnel and tribal council.

Attached please find a project map. Should have any comments, questions or concerns please don't hesitate to contact me patrick.mcginis@icf.com or telephone me at 858 444-3947.

Respectfully,

A handwritten signature in cursive script, reading "Patrick McGinnis". The signature is written in dark ink and is positioned to the left of a vertical yellow line.

Agua Caliente Band of Cahuilla Indians
Patricia Garcia-Plotkin, Director, THPO
5401 Dinah Shore Drive
Palm Springs, CA 92264

Subject: SDG&E TL 6975 Project, San Diego County

Dear Director Patricia Garcia-Plotkin:

SDG&E is in the design phase of a proposed project to construct and operate a new, approximately 12-mile 69 kV transmission line (TL 6975) between the existing SDG&E Escondido and San Marcos Substations. This work will require reconductoring the existing de-energized 138kV transmission line (TL 99911) from the Escondido substation travelling west to Meadowlark Junction. A new transmission line is proposed to run parallel the existing 138kV line (TL 13825/ TL 13811) northwest from Meadowlark substation to San Marcos Boulevard. Finally, TL 680C will be intercepted at San Marcos Boulevard and double circuited overhead east to Viewpoint Drive where the remaining portion of double circuited TL 680C will travel to San Marcos substation is proposed for underground service. ICF is contracted by SDG&E to provide environmental technical and permitting support for SDG&E's application for a Permit to Construct the proposed project, as required by the California Public Utilities Commission's (CPUC) California Environmental Quality Act (CEQA) Information and Criteria List, as well as the CPUC's requirements for the Permit to Construct, pursuant to General Order 131-D. CPUC is the lead agency for complying with CEQA.

The records search for the cultural study indicated that cultural resources have been previously documented in the vicinity of the proposed project, and there are previously documented cultural resources within the project footprint. No known cemeteries exist however, there are recorded Native American or other human remains identified adjacent to the project area. A recent record search of the Native American Heritage Commission (NAHC) Sacred Lands Files indicated the presence of Native American sites within the proposed project area. Further, intensive pedestrian surveys conducted for the proposed project identified cultural resources within the proposed project area.

As there are previously recorded cultural resources located near project activities and construction of the proposed substation would include ground disturbance that could expose previously undiscovered archaeological resources, monitoring by a qualified archaeologist and Native American monitor will occur during vegetation removal or ground-disturbing activities for the project.

Patricia Garcia-Plotkin, Director, THPO

Dear Chairman Mark Macarro:

SDG&E is in the design phase of a proposed project to construct and operate a new, approximately 12-mile 69 kV transmission line (TL 6975) between the existing SDG&E Escondido and San Marcos Substations. This work will require reconductoring the existing de-energized 138kV transmission line (TL 99911) from the Escondido substation travelling west to Meadowlark Junction. A new transmission line is proposed to run parallel the existing 138kV line (TL 13825/ TL 13811) northwest from Meadowlark substation to San Marcos Boulevard. Finally, TL 680C will be intercepted at San Marcos Boulevard and double circuited overhead east to Viewpoint Drive where the remaining portion of double circuited TL 680C will travel to San Marcos substation is proposed for underground service. ICF is contracted by SDG&E to provide environmental technical and permitting support for SDG&E's application for a Permit to Construct the proposed project, as required by the California Public Utilities Commission's (CPUC) California Environmental Quality Act (CEQA) Information and Criteria List, as well as the CPUC's requirements for the Permit to Construct, pursuant to General Order 131-D. CPUC is the lead agency for complying with CEQA.

The records search for the cultural study indicated that cultural resources have been previously documented in the vicinity of the proposed project, and there are previously documented cultural resources within the project footprint. No known cemeteries exist however, there are recorded Native American or other human remains identified adjacent to the project area. A recent record search of the Native American Heritage Commission (NAHC) Sacred Lands Files indicated the presence of Native American sites within the proposed project area. Further, intensive pedestrian surveys conducted for the proposed project identified cultural resources within the proposed project area.

As there are previously recorded cultural resources located near project activities and construction of the proposed substation would include ground disturbance that could expose previously undiscovered archaeological resources, monitoring by a qualified archaeologist and Native American monitor will occur during vegetation removal or ground-disturbing activities for the project.

If grading or road improvements are to be conducted along existing access roads that contain unevaluated or National Register of Historic Places- or California Register of Historic Resources-

Mark Macarro, Chairman
March 30, 2017
Page 2 of 2

eligible resources, monitoring will occur where the access road crosses the site or is located within the boundaries of a site. If surface expressions of the site (i.e. artifacts) are present within the road, equipment blades will be lifted when traversing the site. Additionally, all vehicles will remain on existing dirt roads and/or new access identified for the Proposed Project. If needed, additional overland travel or access routes will be reviewed by SDG&E's cultural resource specialist, and appropriate avoidance measures and monitoring will be implemented.

Known cultural resources that can be avoided will be demarcated as Environmentally Sensitive Areas (ESAs). Construction crews will be instructed to avoid disturbance of these areas. A qualified archaeological monitor will monitor ground-disturbing activities in the vicinity of all ESAs and areas determined to have a high potential for buried cultural deposits within the Proposed Project area. Native American monitoring will be implemented for portions of the Proposed Project that have the potential to impact identified and mapped traditional locations or places. The role of the Native American monitor will be to observe project construction in mapped sensitive areas and facilitate communication of tribal concerns to the archaeologist and/or construction personnel and tribal council.

Attached please find a project map. Should have any comments, questions or concerns please don't hesitate to contact me patrick.mcginis@icf.com or telephone me at 858 444-3947.

Respectfully,

A handwritten signature in dark ink, reading "Patrick McGinnis". The signature is written in a cursive style. To the right of the signature is a vertical yellow line.

Patrick McGinnis

A recent record search of the Native American Heritage Commission (NAHC) Sacred Lands Files indicated the presence of Native American sites within the proposed project area. Further, intensive pedestrian surveys conducted for the proposed project identified cultural resources within the proposed project area.

As there are previously recorded cultural resources located near project activities and construction of the proposed substation would include ground disturbance that could expose previously undiscovered archaeological resources, monitoring by a qualified archaeologist and Native American monitor will occur during vegetation removal or ground-disturbing activities for the project.

Edwin Romero, Chairperson
March 30, 2017
Page 2 of 2

If grading or road improvements are to be conducted along existing access roads that contain unevaluated or National Register of Historic Places- or California Register of Historic Resources-eligible resources, monitoring will occur where the access road crosses the site or is located within the boundaries of a site. If surface expressions of the site (i.e. artifacts) are present within the road, equipment blades will be lifted when traversing the site. Additionally, all vehicles will remain on existing dirt roads and/or new access identified for the Proposed Project. If needed, additional overland travel or access routes will be reviewed by SDG&E's cultural resource specialist, and appropriate avoidance measures and monitoring will be implemented.

Known cultural resources that can be avoided will be demarcated as Environmentally Sensitive Areas (ESAs). Construction crews will be instructed to avoid disturbance of these areas. A qualified archaeological monitor will monitor ground-disturbing activities in the vicinity of all ESAs and areas determined to have a high potential for buried cultural deposits within the Proposed Project area. Native American monitoring will be implemented for portions of the Proposed Project that have the potential to impact identified and mapped traditional locations or places. The role of the Native American monitor will be to observe project construction in mapped sensitive areas and facilitate communication of tribal concerns to the archaeologist and/or construction personnel and tribal council.

Attached please find a project map. Should have any comments, questions or concerns please don't hesitate to contact me patrick.mcginis@icf.com or telephone me at 858 444-3947.

Respectfully,

A handwritten signature in cursive script, reading "Patrick McGinnis", enclosed in a thin yellow rectangular border.

Alpine, CA 91901

Subject: SDG&E TL 6975 Project, San Diego County

Dear Chairperson Robert Pinto:

SDG&E is in the design phase of a proposed project to construct and operate a new, approximately 12-mile 69 kV transmission line (TL 6975) between the existing SDG&E Escondido and San Marcos Substations. This work will require reconductoring the existing de-energized 138kV transmission line (TL 99911) from the Escondido substation travelling west to Meadowlark Junction. A new transmission line is proposed to run parallel the existing 138kV line (TL 13825/ TL 13811) northwest from Meadowlark substation to San Marcos Boulevard. Finally, TL 680C will be intercepted at San Marcos Boulevard and double circuited overhead east to Viewpoint Drive where the remaining portion of double circuited TL 680C will travel to San Marcos substation is proposed for underground service. ICF is contracted by SDG&E to provide environmental technical and permitting support for SDG&E's application for a Permit to Construct the proposed project, as required by the California Public Utilities Commission's (CPUC) California Environmental Quality Act (CEQA) Information and Criteria List, as well as the CPUC's requirements for the Permit to Construct, pursuant to General Order 131-D. CPUC is the lead agency for complying with CEQA.

The records search for the cultural study indicated that cultural resources have been previously documented in the vicinity of the proposed project, and there are previously documented cultural resources within the project footprint. No known cemeteries exist however, there are recorded Native American or other human remains identified adjacent to the project area. A recent record search of the Native American Heritage Commission (NAHC) Sacred Lands Files indicated the presence of Native American sites within the proposed project area. Further, intensive pedestrian surveys conducted for the proposed project identified cultural resources within the proposed project area.

As there are previously recorded cultural resources located near project activities and construction of the proposed substation would include ground disturbance that could expose previously undiscovered archaeological resources, monitoring by a qualified archaeologist and Native American monitor will occur during vegetation removal or ground-disturbing activities for the project.

If grading or road improvements are to be conducted along existing access roads that contain unevaluated or National Register of Historic Places- or California Register of Historic Resources-eligible resources, monitoring will occur where the access road crosses the site or is located within

RE: SDG&E TL 6975 Project, San Diego County

Mr. Patrick McGinnis,

This message is sent on behalf of the Rincon Band of Luiseno Indians. We have received your letter of March 30, 2017 regarding the above named project. The location you have identified is within the Aboriginal Territory of the Luiseno people, and it is also situated within Rincon's specific area of cultural interest. Embedded in the Luiseno Territory are Rincon's history, culture, and identity.

While the site location is in our Traditional Use Area, we have no new information to share regarding tribal cultural resources for this project. We agree with the recommendation for archaeological and Native American monitoring for ground disturbing activities for the project. Additionally, Rincon would like to offer our services as Tribal Monitors for the project.

Thank you for the opportunity consult and to protect and preserve our Luiseno cultural heritage.

Vincent Whipple

**RE: SLR RESPONSE REGARDING THE PROPOSED SDG&E TL 6975
PROJECT IN SAN DIEGO COUNTY AND ITS POTENTIAL IMPACTS
TO TRIBAL CULTURAL RESOURCES**

Dear Mr. McGinnis:

We, the San Luis Rey Band of Mission Indians (“Tribe”) have received and reviewed your letter dated March 30, 2017 regarding the proposed development known as the SDG&E TL 6975 Project in San Diego County (“Project”). From your letter, the Tribe understands that the Project is located at within the general vicinity of the areas depicted on the map provided in your letter (“Project Area”). We further understand from your letter that you are inquiring whether the Tribe possesses any information and/or concerns regarding tribal cultural resources and/or Sacred Lands in the Project Area.

We are a northern San Diego County Tribe whose traditional and culturally affiliated territory includes Camp Pendleton, the current cities of Oceanside, Carlsbad, Vista, San Marcos and Escondido, as well as many unincorporated areas within northern San Diego County, such as the communities of Fallbrook, Bonsall and Valley Center. We are resolute in the preservation and protection of all tribal cultural resources within all these jurisdictions.

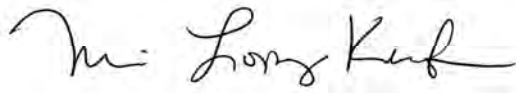

Our Tribe has intimate knowledge about the many discoveries made throughout the Project Areas and is aware of many sacred places and tribal cultural resource sites within and within close proximity to the proposed Project. We strongly urge caution in assessing the land encompassing the Project for any development purposes, as well as incorporating the presence of a Luiseño Native American monitor during all ground disturbing activities (including but not limited to any and all boring activities) and cultural resource assessment surveys.

In regards to information our Tribe can provide ICF regarding these tribal cultural resources and sacred sites within the Project Area, we respectfully request that any further discussion be done in person. Please contact our Cultural Resource Manager Cami Mojado at (760) 917-1736 or via email at cjmojado@slrmissionindians.org to arrange a mutually acceptable meeting date and time.

Furthermore, the Tribe requests that any and all cultural resource surveys completed in the Project Area and/or for the benefit of this Project be provided to the Tribe's Cultural Department at 1889 Sunset Drive, Vista, CA 92081 as your earliest convenience. If digital copies are available, please send them directly to cjmojado@slrmissionindians.org. If a cultural resource survey has not been completed as of today's date, then the Tribe respectfully requests that a Luiseño Native American monitor be present during any proposed survey of the Project properties.

We appreciate this opportunity to provide information and/or share our concerns regarding this Project. We thank you for your assistance in protecting our invaluable Luiseño tribal cultural resources.

Sincerely,

A handwritten signature in black ink, appearing to read "Merri Lopez-Keifer". The signature is fluid and cursive, with the first name "Merri" being more prominent.

Hi Patrick,

I received your letter for the above referenced project and have the following comments:

This project exists entirely within an overlapping area of occupation between Kumeyaay and Luiseno territories. I recommend and request that both Kumeyaay and Luiseno monitoring representation be present for all ground disturbing activities that occur within native soils.

Thank you and please feel free to call directly with any questions or concerns,

Clint
