TABLE 4.5.6: OAKLAND POWER PLANT, 1993 EMISSIONS COMPARED TO COUNTY-WIDE EMISSIONS /a/

Emissions (TPY) CO Source **ROG** NO_x SO_x PM10 1 4 5 7 1 Oakland power plant /b/ Alameda County /c/ stationary 10,209 850 3,705 540 1.164 area 7,982 20,922 2,135 91 26,948 mobile 22,535 182,664 28,412 3,285 2,621 natural 3,602 51 0 total 44,328 204,487 34,252 3,916 30,733 Oakland Plant, % of County 0.01 0.2 < 0.01 < 0.01 < 0.01 Total, excluding "natural" sources

[/]a/ Source: Pacific Gas and Electric Company (PG&E), Proponent's Environmental Assessment: Pacific Gas and Electric Company's Proposed Sale of Four Generating Plants, November 15, 1996; minor modifications by Environmental Science Associates (1997)

[/]b/ Source: Calculated emissions based on emission factors for Hunters Point combustion turbines.

[/]c/ Source: California Air Resources Board, *California Emission Inventory Development and Reporting System -CEIDARS*, 1993 Inventory. PM10 is calculated as a percent of PM emissions, which might not represent actual emissions for particular sources. Data on organic gas emissions were for Total and Reactive Organic Compounds rather than Volatile Organic Compounds (VOC).
