

**TABLE 4.5-9  
 POTRERO POWER PLANT CRITERIA AIR POLLUTANT EMISSIONS,  
 1995, 1996, 1997**

<b>Pollutant</b>	<b>Emissions Estimates(tons per year)<sup>a</sup></b>			<b>1997 Emissions As Percent<sup>b</sup> of:</b>	
	<b>1995</b>	<b>1996</b>	<b>1997</b>	<b>County</b>	<b>Region</b>
Carbon Monoxide	356	413	373	0.6	0.05
Reactive Organic Gases	38	46	52	0.3	0.03
Nitrogen Oxides	766	883	609	4.9	0.37
Sulfur Oxides	14	24	66	1.9	0.17
Particulate Matter	34	41	49	0.4	0.03

<sup>a</sup> Emissions estimates are based on SERASYM™ results for 1999 described in Chapter 3 and Attachment G, as adjusted to reflect the types of emissions controls that were in place during the 1995-1997 period [based on a tentative schedule for implementation of retrofit controls (Pacific Gas and Electric Company, 1998a)] and to reflect the capacity factor of each unit during that period.

<sup>b</sup> Percentages are based on emissions inventory data for 1995 and 2000 (interpolated to 1997) that is included in the *BAAQMD CEQA Guidelines* (April 1996).
