

Southern California Edison
Presidential Substation Project A.08-12-023

DATA REQUEST SET Presidential ED-03 (Part 1)

To: CPUC

Prepared by: Jack Haggemiller

Title: Field Engineering Project Manager

Dated: 05/19/2009

Question 16:

Project Description

In regard to vault installation, the PEA states, assuming excavated soil is uncontaminated, approximately 80 tons of soil would be extracted. Eighty tons of soil is approximately eight loads with 10-ton dump truck. What would occur if the soil was contaminated? Whether or not the soil is contaminated or uncontaminated, would it be hauled off-site?

Response to Question 16:

If the soil is found to be contaminated, SCE would enlist the assistance of its approved hazardous waste contractor to handle the removal and disposal at an approved off-site treatment or disposal facility. Uncontaminated soil may be re-used on-site as backfill, or hauled off to a non-hazardous landfill.
