Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)		
Violation Notes:			

Returned to compliance on 07/15/2021. There is a diesel generator on site with a 224 gallon capacity tank that has not been reported in CERS. Add the diesel volume to CERS. This will need to be reported as a separate line item from the diesel fire pump since it is not in the same location and the tank vessel size is different than that of the fire pump. Tenant has taken responsibility for the diesel generator.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Eval Notes:

New business inspection. This is for the building shell, fire pump, diesel generator, fire alarm, and fire sprinkler system, which are all controlled by the property manager and not the tenant, Living Spaces. Living Spaces IS currently managing the fire alarm system, but CBRE is taking ultimate responsibility for this. This inspection does not cover any tenant spaces.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Description of Events: The truck was initially loaded at the shipper's location and included a mixed shipment of 2 cubic yard boxes and drums. The boxes were loaded into the truck first using a pallet jack. The pallet jack was left under the second box and the subsequent 55 gallon waste drums were loaded around the two boxes. All containers were secured in place with a cargo strap. While backing up to the Veolia loading dock in Fremont, CA, the load apparently shifted and one of the 55 gallon drums bumped the corner of the pallet jack, causing a puncture. The leak was noticed as it began dripping from under the bed of truck cargo area. A berm of absorbent was placed to contain the spill on the concrete pad. The truck was offloaded and the leaking drum was overpacked into an 85 gallon drum within approximately 15 minutes of the leak observation. The major portion of the leak was contained on the truck with approximately 5 gallons that leaked onto the concrete dock area. The spilled material was cleaned up on the tuck and in the concrete area by Veolia. The City of Fremont Fire Dept/CUPA was notified at 4:40 pm to the non-emergency dispatcher, badge #784. No response was required.

Recommend Actions Taken: The Veolia Fremont field technicians will be trained on cargo loading and will include a hands-on training where drivers/technicians will be presented with various scenarios of loading complications. This training will also include a section on planning before routing to include specific truck capacity.

Violation Description:

Failure of the new hazardous waste tank assessment to include all of the following information:
1) Tank configuration (i.e., horizontal, vertical), material of construction, and gross capacity (in gallons);
2) Design standard(s), if available, according to which the tank and ancillary equipment were or will be constructed and all of the following information; A) Material of construction; B) material thickness and the method used to determine the thickness; C) description of tank system piping (material, diameter); D) description of any internal and external pumps; and E) sketch or drawing of tank including dimensions.

3) Documented age of the tank system (if tank was previously used), if available, (otherwise, an estimate of the age);
4) Description and evaluation of any leak detection equipment;
5) Description and evaluation of any corrosion protection equipment, devices, or material;
6) Description and evaluation of any spill prevention or overfill equipment;
7) Description and evaluation of secondary containment for the tank system (secondary containment must meet minimum standards as specified in subsections (j)(1) through (j)(3) of this section) including applicable secondary containment for ancillary equipment as required in subsection 66265.193 (f);
8) Hazardous characteristics of the waste(s) that have been or will be handled;
9) Prior to placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified, professional engineer, registered in California, either of whom is trained and experienced in the proper installation of tank systems, shall inspect the system or component for the presence of any of the following items and document in writing the results of the inspection:
A) Weld cracks or breaks; B) scrapes of protective coatings; C) corrosion; D) any structural damage or inadequate construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system is placed in use.
10) All new tanks and ancillary equipment shall be tested for tightness prior to being placed in use. The results of the test(s) shall be documented in this assessment. Tank system integrity or leak test requirements must be in compliance with all local requirements. Prior to conducting a tank system integrity test or leak test, contact local agency staff for local requirements.
11) Estimated remaining service life of the tank system based on findings of subsections 1) through 10).

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 02/17/2015. Facility underwent closure on their AWN system. Completed on 2/17/2015.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and,
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and

3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Violation Notes:

Returned to compliance on 02/12/2015. OBSERVED SEVERAL FLORESCENT TUBES STORED ON SHELVES WITHOUT THE REQUIRED CONTAINMENT.

Violation Description:

Failure to properly label the following categories of universal waste as:
1) Each batteries or the container in which the batteries are contained as "Universal Waste-Battery(ies)".
2) Each mercury-containing equipment or the container in which the mercury-containing equipment is contained as "Universal Waste -Mercury-Containing Equipment".
3) Each Florescent lamp or the container or package in which the lamps are contained as "Universal Waste-Lamp(s)".
4) Each electronic devices or the container or pallet in or on which the electronic devices are contained as "Universal Waste-Electronic Device(s)".
5) Each CRTs or the container or pallet in or on which the CRTs are contained as "Universal Waste-CRT(s)".
6) A container of CRT glass shall be labeled or marked clearly with the following phrase: "Universal Waste-CRT glass".
7) In lieu of labeling individual electronic devices, CRTs, and/or containers of CRT glass pursuant to subsections d) through f) of this section, a universal waste handler may combine, package, and accumulate those universal wastes in appropriate containers or within a designated area demarcated by boundaries that are clearly labeled with the applicable portion(s) of the following phrase: "Universal Waste-Electronic Device(s)/Universal Waste - CRT (s)/Universal Waste-CRT Glass".

Returned to compliance on 07/03/2018. Observed metal-cased used oil filters that were left out to drain on top drip pans on the ground by outdoor used oil tank. Mr. Achaya stated that these filters were left to drain for at least 24 hours before being placed in closed and labeled containers. Used oil filters must not be left draining on these open drip pans overnight.

Violation Notes:

Returned to compliance on 07/03/2018. Inspection procedures: -Mr. Achaya stated that he conducts weekly and monthly logged inspections of BFI tanks, but admitted that he does not check secondary containment ports for all but one of these tanks. Begin conducting periodic tank inspections in accordance with industry standards. -At the time of inspection, no employees on-site were aware of how to inspect secondary containment ports for each of the 3 double-wall, green, 280 gallon tanks. Determine how to access this port so that inspections can be conducted in accordance with industry standards. -The three compartmented tanks removed from the decommissioned oiler tanker are not permanently closed and are not currently included in periodic inspections. (See comments for details.) Begin conducting periodic inspections for these tanks until they are removed or permanently closed. -Inspection records for tanks were only available for 2018. Facility must retain these records for 3 years and make them available [Truncated]

Violation Description:

Failure to comply with one or more of the following requirements:
1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector.
2. Keep written procedures and records of inspections and integrity tests for at least three years.
3. Keep comparison records.

Violation Notes:

Returned to compliance on 07/03/2018. Facility has not conducted tank integrity testing for any tank observed during the inspection. Periodic inspection logs do not meet minimum industry standards to satisfy this requirement. Conduct tank integrity tests for all tanks owned by BFI (containing petroleum products) according to industry standard. If facility choses to use annual tank inspections according to STI SP001 to satisfy this requirement, individuals conducting these inspections must demonstrate to the inspector that they have sufficient knowledge of the tanks to inspect all required elements. Provide documentation of tank integrity tests for each tank and inspector qualifications to HMCD for review. Maintain these documents for the life of the tank and ensure they are made available for inspections.

Violation Description:

"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan:
1. On a regular schedule.
2. After making material repairs.
3. Use non-destructive testing.
4. Inspect each container's supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."

Violation Description:

Failure to include in the SPCC Plan a prediction of the direction, rate of flow, and total quantity of oil that could be discharged for each type of major equipment failure where experience indicates a reasonable potential for equipment failure.

The rate of flow is not required on a Tier I qualified facility SPCC Plan.

Violation Notes:

Returned to compliance on 07/03/2018. Observed oily absorbent and one oily rag in facility trash can next to parts storage container. Records for the past 3 years show no disposals of oily solids and no accumulation containers were observed on-site for collection of this waste. Observed saturated

absorbents and evidence of prior spill clean-up in areas around the parts storage container, below tank piping in the lubrication station, and underneath a tractor that was being serviced in the outdoor paved area near the pump house. On a Notice of Inspection issued by HMCD to the facility on 8/3/2007, BFI was cited with a violation for illegal disposal of oily debris in trash cans and was notified that saturated absorbents generated from clean-up of used oil must be managed as hazardous waste. Immediately cease illegal disposal of debris saturated with used oil unless facility can demonstrate that this waste is non-hazardous. Begin collecting this hazardous waste in closed, labeled containers and retain all [Truncated]

Violation Description:

Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.

Violation Notes:

Returned to compliance on 08/06/2018. Facility tanks have no automatic shutoff valves or alarms to prevent overfills and rely solely on a fast response system: -No filling procedures were available to demonstrate how facility uses a fast response system to prevent overfills. 1000 gallon diesel tank has a large open port lid with no way to attach filling hose, and filling may be done by a vendor without oversight or assistance from BFI employees. It is unlikely that an employee stationed at the filling truck can see the liquid level indicators and ensure the hose stays in the fill port. Provide written filling procedures for each tank that demonstrate how a fast response system will prevent overfills and how facility ensures that vendors are familiar with each tank they are required to fill if employees are not there to supervise. Ensure filling procedures are adequately described in SPCC plan.

Violation Description:

Failure to engineer or update each container installation in accordance with good engineering practice to avoid discharges and/or failure to by provide at least one of the following devices on each container installation:
1. An audible or visual high liquid level alarm.
2. High liquid level pump cutoff devices.
3. Audible or code signal communications between tank gauger and pumping station.
4. A fast response system for determining liquid levels, such as computers, telepulse or direct vision gauges.

Violation Notes:

Returned to compliance on 07/03/2018. Page 2-3 and Appendix D of plan states basic fueling procedures including to following information: fueling must be done with ignition turned off and on paved surfaces. Fueler must check volume prior to filling, not overfill tank, not keep the nozzle open using any device other than his hand, remain with the vehicle while fueling, and clean up spills as directed in this procedure. Procedures do not adequately account for the differences between tanks (such as distance from truck to liquid level sensor). Plan does not address how filling procedures are communicated to filling vendors, who are not supervised by BFI employees and who are not covered in SPCC trainings.

However, no other security measures are described in the plan. NOTE: Observed the following security measures: Access to portable containers is possible and located a short distance from the front parking lot. Facility is not gated at night but has one security guard to patrol the facility at night. In addition, facility has cameras and appropriate security lighting to deter unauthorized access. Access ports to 1000 gallon diesel tank dispensing nozzle are locked with a padlock. NOTE: Fill port of diesel tank is not locked. If this is to be locked, address this in security measures.

Violation Description:

Failure to describe in the SPCC Plan facility security measures including:
1. How access to the oil handling, processing, and storage areas is secured and controlled.
2. How master flow and drain valves are secured.
3. How unauthorized access to starter controls on oil pumps is prevented.

This inspection began on 5/10/19 and concluded today. Newby Island Sanitary Landfill generates wastes typically associated with truck service and repair. Facility generates more than 1000 kilograms of used oil during a few months of the year and therefore operates as large quantity hazardous waste generator. Walk-through included inspection of landfill maintenance shop; outdoor storage area near maintenance shop; 500-gallon gasoline tank area; 12,000-gallon diesel tank storage area; and CST-2 hazardous waste storage compartments. Facility personnel are trained to separate out hazardous wastes that are observed in the landfill trash. The hazardous wastes are place in designated cabinets (acids, corrosives, flammables, toxics) for proper storage until they are disposed. Inventory log sheets are maintained in each cabinet and all containers are labeled. Facility recently had a hazardous waste pickup so the cabinets were empty at the time of this inspection. Facility uses [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violation Description:

Failure to maintain the following general tank operating requirements:
a) Hazardous wastes or treatment reagents shall not be placed in a tank system if they could cause the tank, its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail.
b) The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum:
1) Spill prevention controls (e.g., check valves, dry discount couplings);
2) Overfill prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and
3) Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank.

FACILITY FAILED TO CONDUCT A TANK ASSESSMENT OF THE USED OIL TANK.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in

contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

IDC of California Inc is a sanitary landfill that is operated under the name Newby Island Sanitary Landfill. Newby Island started being used as a landfill in 1931 when it was bought by San Jose Scavenger Company. In 1972, it was purchased by International Disposal Corporation of California (IDC) which is a wholly owned subsidiary of Browning-Ferris Industries of California, Inc, which in turn is a subsidiary of Republic Services, Inc.

Throughout Newby Island's ownership history, they have never accepted hazardous waste. Various letters from the County of Santa Clara, the Depertment of Toxic Substances Control, and the San Francisco Water Quality Control Board confirm that Newby Island has not accepted hazardous wastes and operates as a generator.

Violation Date:	10/20/2020	**Violation Source:**	CERS
Violation Program:	UST	**Violation Division:**	Santa Clara County Environmental Health

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Notes:

Returned to compliance on 10/22/2020. DUSTO INSPECTION DISCREPANCIES: -INSPECTION PAST 30 DAYS, INSPECTION CONDUCTED 3/28/2020 TO 4/30/2020. -DUSTO INSPECTION 3/28/2020(S1) AND 6/30/2020(S3) ACKNOWLEDGED VACUUM ALARMS BUT DID NOT PROVIDE A NOTE OF HOW THE ALARMS WERE RESOLVED.

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements:
Be performed by an ICC certified DO.
Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
Inspect for the presence of liquid/debris in spill containers.
Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
Check that all testing and maintenance has been completed and documented.
Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Notes:

Returned to compliance on 10/24/2022. In the monthly inspection reports, the facility's DUSTO mentioned every alarm that occurred, and oftentimes would also note preliminary follow-up actions such as calling for service. However, this was not always the case, and in instances where no follow-up action was identified, the facility also failed to identify such actions, despite signing the reports. Additionally, while work orders were found for most follow-up actions, some could not be located. Ensure that any compliance issue noted in Section 3 of the monthly reports is properly followed up with, including: • Recording any follow-up actions in Section 5 of the report • Keeping proper documentation of any service (e.g., work orders for each time a contractor arrives onsite to troubleshoot)

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements:
Be performed by an ICC certified DO.
Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
Inspect for the presence of liquid/debris in spill containers.
Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
Check that all testing and maintenance has been completed and documented.
Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes:

Returned to compliance on 10/12/2022. The Spill Container Testing report from 10/19/21 was not submitted to HMCD. The facility had a copy of this report onsite. Note: Mr. Spring was notified of this deficiency, and the violation was corrected during the inspection. No further actions required.

Violation Description:

Failure to submit a copy of the spill containment test results on the "Spill Container Testing Report Form" to the UPA within 30 days after the test.

Violation Notes:

Returned to compliance on 10/24/2022. The diesel STP sump contained two small puddles of liquid. One puddle was blue in color, and located directly underneath the sump's drain valve, indicating a likely leak of monitoring fluid from the sump's interstitial space. The other puddle was clear or light brown/yellow in color, but there was no obvious source. The regular gasoline STP sump also contained a puddle of blue liquid directly underneath the drain valve. As with the diesel sump, it seems likely that monitoring fluid is leaking. Ensure all liquid is removed from the sumps, and that they remain dry. If necessary, request service to investigate causes of leaks/spills, and to repair any leaking components.

Violation Description:

Failure to maintain secondary containment (e.g., failure of secondary containment testing).

On site to witness triennial overfill prevention equipment inspection. Testing was completed by Central Petroleum Maintenance technician, Mike Spring. Mike's certifications were checked as follows: - ICC UST Service Technician (Exp. 11/25/2022) - OPW PHase I (Exp. 1/17/2024) Facility has three tanks, one regular grade, one premium grade and one diesel tank. Drop tubes were removed from risers and inspected for functionality of the flapper and measured to ensure they shut off flow below 95% capacity. Containment solutions 10 foot diameter tank charts were used. - For the 87 tank, shut off height was determined to be 102.125" which corresponds to 18269 gallons on the 20,000 gallon tank chart. Full capacity is 19951 gallons. 18269/19951 = 91.5%, which is in compliance. - For the 91 tank, shut off height was determined to be 103" which corresponds to 10996 gallons on the 12,000 gallon tank chart. Full capacity is 11873 gallons. 10996/11873 = 92.6%, which is in [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Onsite 10/11/22 to witness the annual monitoring certification for three underground tanks (1x 20,000-gallon regular gasoline, 1x 12,000-gallon premium gasoline, and 1x 8,000-gallon diesel; premium gasoline and diesel tanks are compartmented). Mike Spring of Central Petroleum Maintenance was properly certified: ICC (exp. 11/25/22), Veeder-Root (exp. 9/20/23), and VMI Phase I (exp. 1/10/24). Also onsite were Hunter Dang, Environmental Health Specialist Trainee from this office, and Martin Gatdula from Milpitas Fire Department. This inspection concluded on 10/12/22 with the issuance of this report. The monitoring panel displayed "ALL FUNCTIONS NORMAL" at the beginning and end of the inspection. All required components were tested and passed, including: • 3x submersible turbine pump (STP) sump sensors • 3x fill sump sensors • 3x STP sump brine sensors • 3x fill sump brine sensors • Vent box sensor • Vent box brine sensor • 6x under dispenser containment (UDC) [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violation Description:

Failure of the universal waste handler to properly process accumulated universal waste within a maximum accumulation time of one year and /or demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received. The universal waste handler may make this demonstration by:
1) Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received;
2) Marking or labeling the individual item of universal waste (e.g., each battery or thermostat) with the date it became a waste or was received;
3) Maintaining an inventory system onsite that identifies the date the universal waste being accumulated became a waste or was received;
4) Maintaining an inventory system onsite that identifies the earliest date that any universal waste in a group of items of universal waste or a group of containers of universal waste became a waste or was received;
5) Placing the universal waste in a specific accumulation area and marking or labeling the area to identify the earliest date that any universal waste in the area became a waste or was received; or
6) Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it became a waste or

Facility Type: HIST PERMITTED
Calenviro Screen Percentile Sc: 65-70%
Site Facility Type: UNDERGOING CLOSURE - PERMIT AUTHORITY: Standardized
Assembly District: 25
Senate District: 10
Census Tract: 6085504602
Facility History:

The facility is non-operational and is undergoing closure. Due to operator being unresponsive on closure, Permitting transferred the oversight of the facility closure to DTSC's Cleanup program on 11/1/2016.

FACILITY DESCRIPTION/ HISTORY

Clearwater Environmental Management, doing business as Alviso Independent Oil, operated a hazardous waste storage and transfer facility for wastes from off-site generators. The facility consists of a leased area within a seven (7) acre parcel (APN 015-12-063) at the very end of Archer Street and is offset by 64 feet to the northeast from the end of Archer Street in Alviso, CA. Archer Street officially ends at State Street in San Jose. The facility property is located behind 1341 Archer Street right on the edge of the Alviso Slough. The nearest residences are located on State Street within a quarter mile.
The wastes stored and transferred by Alviso are generated from gas stations, lube change businesses, car dealers and industrial accounts. Occasional pickups include oily wastewater and sludge from used oil tanks, and oily water from spill cleanups. The off-spec petroleum wastes that Alviso receives come from refineries. The wastes were transported from offsite generators to the facility on a "milkrun" modified manifest system where only one manifest addresses an entire truckload of wastes. The wastes were stored in containers or tanks. As of 1/19/2022 this facility is still undergoing closure.

PERMITTING REGULATORY DESCRIPTION/ HISTORY

The facility had operated at this site since 1976. This facility was known as Alviso Independent Oil from its inception until it was sold to Clearwater Environmental Management in January 1997. Clearwater was granted a Series C Standardized Hazardous Waste Facility Permit, which was effective on December 24, 1997, and expired on December 24, 2007. Prior to the effective date of the Standardized Permit, the facility was authorized under a Standardized Permit Grant of Interim Status issued in 1993.

The Standardized Permit authorized storage in four (4) tanks with a combined capacity of 45,000 gallons, a container storage area with a capacity of two

(2) 55-gallon drums, and a proposed container storage area with a capacity of 88 55-gallon drums. Wastes were consolidated and stored in tanks and then transferred to trucks for transportation to treatment or disposal facilities. Clearwater was not authorized to treat or dispose of waste at its facility. Clearwater did not renew the Standardized Permit prior to its expiration on December 24, 2007, and therefore the facility is not currently in operation. The site is undergoing closure with oversight by DTSC. DTSC issued an enforcement order to the facility in July of 2013 for failing to submit a closure certification.

Site History:

Clearwater Environmental Management, doing business as Alviso Independent Oil, operated a hazardous waste storage and transfer facility for wastes from off-site generators. The facility consists of a leased area within a seven (7) acre parcel (APN 015-12-063) at the very end of Archer Street and is offset by 64 feet to the northeast from the end of Archer Street in Alviso, CA. Archer Street officially ends at State Street in San Jose. The facility property is located behind 1341 Archer Street right on the edge of the Alviso Slough. The nearest residences are located on State Street within a quarter mile.
The wastes stored and transferred by Alviso are generated from gas stations, lube change businesses, car dealers and industrial accounts. Occasional pickups include oily wastewater and sludge from used oil tanks, and oily water from spill cleanups. The off-spec petroleum wastes that Alviso receives come from refineries. The wastes were transported from offsite generators to the facility on a "milkrun" modified manifest system where only one manifest addresses an entire truckload of wastes. The wastes were stored in containers or tanks..

Site History:	

On July 8th 1999 , one 10,000 gallon underground tank last containing diesel was removed. According to visual descriptions by Inspector Jeff Mouroux of the San Jose Fire Department, the tank was intact with no visible corrosion holes, however the excavation contained visible and olfactory signs of oil on the tank, on the excavation sidewalls and on the groundwater, described as black and oil like. Two soil samples were recovered from each end of the tank, along the excavation sidewall at the soil groundwater interface (approximately 11 feet bgs.). One groundwater grab sample was also recovered from the bottom of the excavation. Both samples were recovered under the direction of Inspector Mouroux. Soil samples “T-1” and “T-2” contained 290 parts per million (ppm) and 290 ppm of TPH as diesel respectively, while groundwater sample “GW” contained 9.6 ppm TPH as diesel. It was noted by the analytical lab that all three samples were diluted due to high concentrations of non-target hydrocarbons and that although the soil sample results were within quantitation range, the chromatographic pattern was not typical of fuel. Opinion of ERS is that the contaminate visually and analytically observed may also be that of a heavier hydrocarbon, such as motor oil, and that future samples also be analyzed for TPH as motor oil.

However, the facility previously failed to document attempts to coordinate with the fire department. Mr. Thomas provided documentation of attempts to coordinate a facility tour with local emergency responders for all sites on 4/1/2022. In addtion, facility RMP references CERS for the Emergency Response Plan (ERP), but this plan does not include chemical specific first aid and does not provide information on how neighboring facilities will be contacted. While some of the first aid inforamtion is located on page 21 of the RMP, facility ERP does not adequately address requirements of 19 CCR 2745.8.

Violation Description:

Failure of owner or operator of a stationary source whose employees will not respond to accidental releases of regulated substances to meet the following:

1. For stationary sources with any regulated toxic substances held in a process above the threshold quantity, the stationary source is included in the community emergency response plan developed under Section 11003 of Title 42 of the United States Code (USC), is included in the city or county Hazardous Materials Area plans, and/or is included in the business plan program, pursuant to Section 25507 of the Health & Safety Code. The owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies;

2. For stationary sources with only regulated flammable substances held in a process above the threshold quantity, the owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies; and,

3. Appropriate mechanisms and written procedures are in place to notify emergency responders when there is a need for a response.

Routine California Accidental Release Prevention (CalARP) program inspection conducted with Ruben Williams, Hazardous Materials Compliance Division (HMCD) and Paul Thomas, Associate Engineer Santa Clara Valley Water District (SCVWD). Facility is a CalARP Program 2 facility due to the storage/use of 19% Aqueous Ammonia solution in two 4070 gallon tank and associated equipment (pumps, piping) for water treatment activities. A facility walk through and document review was completed today. Aqueous Ammonia tanks was observed in good condition. The tank top bolts and flanges showed signs of corrosion that should be investigated. Tanks and metering pumps are stored in a secondary containment structure. The secondary containment structure is constructed to collect in sumps which are electronically monitored at the control room which is staffed 10 hours, 7 days a week. The system is remotely monitored 24/7 by the Penitencia and Rinconada Water Treatment Plants and there [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Inspection commenced on 4/4/2022 and concluded today with issuance of the inspection report. Onsite for a routine inspection with Ashley Ryder, of HMCD. The following individuals from the facility were also present during the walk-through: Paul Thomas and Heather Malanog. Facility is a program 2 facility that last certified and submitted an RMP on 3/28/2018 for aqueous ammonia storage. The ammonia tanks were installed in 2012. Electronic liquid leak sensors are present in the tank secondary containment sump, which is also the low point for piping secondary containment. Tank liquid levels are monitored by a SCADA system and a control room operator monitors tank filling from the control room after verifying the load capacity is correct. SCADA system alerts can be directed to staff cell phones. No audible or visual alarms exist outside of the SCADA system for overfill prevention. Facility has not had any releases. Facility has not had any covered process modifications since [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Initial Site Inspection - Initial site visit focusing on the golf center portion of the development. Possible local environmental concerns around former maintenance building (former fueling and chemical storage). Otherwise no evident environmental issues. The areas adjacent to Guadalupe River are to be left as a riparian corridor, including the lower elevation northern portion of the site, adjacent to the oxbow lake (former meander of the Guadalupe River). Stormwater issues, particularly associated with the significant alterations to stormwater flow due to the development, will need to be addressed.

Title Description Comments:

Site Inspection - Staff observed borings for groundwater and soil vapor sampling per the June 6, 2019, Work Plan for Environmental Subsurface Investigation Services. Site grading was in progress and the ground surface has been modified since prior sampling occurred. Footing trenches were already excavated for the Top Golf center and soil vapor probes were placed in locations where the trenches would not interfere with the sampling. Stockpiles of debris were located along the west side of the project and sorted by type (e.g., concrete, asphalt, other construction debris). While staff did not see any evidence of hazardous materials in the debris, there were a few items that appeared to be hydrocarbon-stained. On the east side of the Top Golf center, a large trench was being excavated and a storm drain installed. There was no evidence of contamination in the open portion of the trench.

Violations

Violation Date:	03/01/2023	**Violation Source:**	CERS
Violation Program:	HW	**Violation Division:**	Fremont City Fire Department

Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Some satellite accumulation containers are labelled as hazardous waste containers in a room with other similar containers labelled as satellite waste. Standardize how satellite accumulation is done so that waste does not end up exceeding accumulation times.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 11/10/2022. 1.) Update hazardous materials inventory in CERS to reflect what?s stored on site. A lot of inventory has been removed or quantities have changed. 2.) Make sure all inventory is reported in the appropriate unit measurement (liquids must be reported in gallons, gases in cubic feet- unless refrigerated liquid gas, solids in pounds). At least a handful of the inventory was not reported in the proper measurement unit. 3.)Consolidate like-items in the inventory. There should only be one entry per chemical/material type. If it?s stored in multiple locations, that can be detailed in the ?Location? section of CERS when filling out the inventory.4.) The metals in the current inventory that are not in powder form are not considered hazardous and should be removed. Metals that are in powder form should be kept or added to the inventory. Make sure the hazard classifications are correct when adding them to the inventory list. (None are considered pyrophoric)

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 01/08/2016.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and,
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:

1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Violation Notes:

Returned to compliance on 11/15/2022. PE certification was last done in 2016. Have a new PE certification done of the hazardous waste treatment system before the end of the year. PE Assessment done, but it showed that a seismic upgrade was necessary. Site selected a vendor, who then created formal drawings and went through the permitting process, and upgraded seismic bracing of tanks. Some trades were affected by the pandemic and work scheduling was delayed by a labor shortage. The work was finally completed and a revised PE assessment will be done.

Violation Description:

Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violations

Violation Date: 11/07/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Fremont City Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 12/08/2022. Inventory in CERS has too many tiny entries. Report materials at threshold quantities per control area. If individual inventory items are less than threshold quantities, group like with like (miscellaneous flammable liquids, mixed combustible liquids, etc) per control area. The only exceptions are for highly toxics, pyrophorics, unstable, and water reactives. Those should continue to be listed individually regardless of volume. In Progress. Site representative is working on this. Inventory has been consolidated.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 11/07/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Fremont City Fire Department
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Notes:

Returned to compliance on 02/06/2023. This building has an active machine shop which is using standard machine coolants and hydraulic oils. Site reps were not aware of where or how the waste from this operation is captured or disposed. Develop a program or plan for the disposal of used machine coolant and oils, as well as any oil-contaminated chips that are generated by the CNC, mill, lathe, and drill press. Waste hauler has set up bins, a profile, and labels.

Violation Description:

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violations

Violation Date: 11/07/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Fremont City Fire Department

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 02/06/2023. Oil-contaminated chips from machine shop are being collected, but waste container is not labeled as hazardous waste. Chips are mostly plastic chips and are covered with hydraulic oil. Label accumulation bin with hazardous waste label. Bin has been labeled.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Notes:

Returned to compliance on 05/19/2021. Site has not uploaded their re-assessment that was done by the PE, but they do have it hard copy on site.Site has uploaded new assessment into CERS.

Violation Description:

Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Notes:

Returned to compliance on 06/01/2021. Site had an overflow event during maintenance operations. Submit a corrective action report to prevent a re-occurrence and train staff.Corrective and preventive actions created and approved.

Violation Description:

Failure to comply with general tank operating requirements:
a) Hazardous wastes or treatment reagents shall not be placed in a tank system if they could cause the tank, its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail.
b) The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum:
1) Spill prevention controls (e.g., check valves, dry discount couplings);
2) Overfill prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and
3) Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank."

Site History and Current Status Syntax Court Disposal Site was never operated as a permitted disposal site. Based on historical aerial photo review and subsurface investigations, undocumented fill has been placed at and in the vicinity of the Project Site during multiple episodes. Fill placement appears to have been related to general land reclamation in the Guadalupe River floodplain area in Alviso, periods of unregulated waste dumping beginning in the late 1950s, and site filling/re-grading during construction activities for North First Street and the Highway 237 freeway and interchange at North First Street. The entire Project comprises 32 acres of land (Project Site) located west of North First Street and north of Highway 237 in San Jose, California. The Project Site includes 30.8 acres of undeveloped land owned by 237 North First Street Investors, LLC and a 1.2-acre sanitary sewer pump station parcel owned by the City of Santa Clara. A development permit for the Project Site has been approved by the City of San Jose and includes plans for four commercial office buildings and a hotel with associated parking lots, paved access roads, landscaping, and open space areas. Requirements for landfill closure and post-closure development, monitoring, and maintenance are contained in Title 27 of the California Code of Regulations, Sections 21090 and 21190 (27 CCR 21090 and 27 CCR 21190). This Plan addresses requirements of 27 CCR 21090 and 27 CCR 21190 for the relevant areas of the Project Site: Parcel 1 and the Hotel Parcel. (2015) The undeveloped portions of the Project Site are in the process of being divided into three legal parcels (Parcel 1, Parcel 2, and the Hotel Parcel).

Title Description Comments:

Site Inspection - View site conditions from top floor of new office building. Oblique aerial views include evidence of extensive homeless camp activity on adjacent property to west. This includes the cut-off oxbow lake that is a potential receptor for groundwater impacts. However, manager of office building states he has evidence of contamination of the surface water emanating from the homeless camp, including a floating fuel container with associated sheen, and use of the water body for disposal of human waste.

Comments: DTSC conducted an annual inspection to check the condition of the cap that is on the site and to verify compliance with the land use restrictions that are included in a Deed Restriction. Numerous animal burrows were observed along the perimeter of the fence, although the cap was observed to be in generally good condition. The damaged fence observed during last year's inspection was repaired. There is no evidence of any activities prohibited by the Deed Restriction.

Comments: The RP, South Bay Development Company, had an annual inspection report performed on July 19, 2013. Animal burrows and some charring possibly from a grass fire were noted; however, impacted soil remains under the 1.5 foot layer of clean soil and remains undisturbed. Inspector recommend that fence maintenance should be considered for the shrubbery/trees growing into the fence since they may damage the fence. DTSC concurs with the conclusion that the current site conditions remain protective of human health.

Comments: The Department of Toxic Substance Control (DTSC) has reviewed the 2020 Annual Inspection Report dated December 9, 2020 for Cisco Systems Site 6 located at North First Street and Syntax Court in San Jose, CA (Site). The report documented a Site inspection performed on November 7, 2020. The restricted parcel is paved with an asphalt parking lot, driveways, two office buildings and a hotel.
DTSC concurs with the conclusion that the current site conditions remain protective of human health and the environment. Impacted soil remains undisturbed under paving or under a layer of clean soil.

Document Type: Land Use Restriction - Site Inspection/Visit
Date Completed: 6/6/2011
Comments: DTSC conducted an annual inspection to check the condition of the cap that is on the site and to verify compliance with the land use restrictions that are included in a Deed Restriction. Numerous animal burrows were observed along the perimeter of the fence, although the cap was observed to be in generally good condition. The damaged fence observed during last year's inspection was repaired. There is no evidence of any activities prohibited by the Deed Restriction.

Violation Notes:

Returned to compliance on 05/06/2021. The site seems to have taken a piecemeal approach to this requirement, but has all of the required content in various documents. Fremont Fire requests the site compile all information required by federal and sate Large Quantity Generator into a single document that is made accessible to employee and responders. Ensure the new document contains: actions facility personnel must take to in response to fires, explosions, or any release of hazardous waste to air, soil, or surface water at the facility, a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), an evacuation plan, names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator.

Violation Description:

Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities, evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)

Other Inspection for CUPA permit. All violations have been corrected. While at the station during the test for the spill container, a slow leak was observed. When the container was re-tested, it did not appear to leak. Report not received until February 15th, and it indicates spill container was repaired by others, but technicians were able to get the spill container to hold while the inspector was present. There were subsequent tests done by others.; Note: data in [EVAL Notes] field for some records is truncated from the source.
