Site History:

Target Masters West was a gun shop with an indoor shooting range. It operated from approximately 1982 until 2019. The indoor shooting range did not maintain best management practices for air ventilation and filtration, and unauthorized releases of metals-containing dust caused contamination at Target Masters West and adjacent interior and exterior areas (lead). A gymnastic studio was cleaned prior to DTSC taking over oversight. That cleanup was conducted under Santa Clara County Hazardous Materials & Site Mitigation Programs oversight. DTSC's oversight is for the outside areas that may have been impacted. Exposed soil areas as well as hardscape areas (e.g., asphalt, cement) will be investigated for lead contamination. The only exposed soil within the Minnis Circle Commercial Properties is located within small landscaped areas and planters. There is no exposed soil within the adjacent City of Milpitas Public Works Yard which is located behind the Site. The only exposed soil within the nearby residential area is within landscaped areas adjacent to the railroad right-of-way. The residential area located approximately 150 feet to the west-southwest of the Site on the other side of the railroad right-of-way. The remedial investigation (dust and soil sampling) is to occur in August 2020. 2020 NB

Waste Code Details

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 561
Waste Code Description: Detergent and soap

Title Description Comment: Site Inspection - wet weather preparation. Staff checked points of concern noted in the most recent groundwater monitoring report. This included the northernmost part of the landfill to observe area of historic seeps. No evidence of seeps were noted. The consultant said that seeps predated the adjacent cut-off channel for the Guadalupe River, which may have altered the groundwater flow. Staff checked for reported erosion of interim ecotone soils along Pond A-8. A large amount of soil had been placed along the shoreline expanding out into the pond. While this provides additional wave protection for the landfill, it is currently steeply-banked and subject to wave and rain erosion. Additional grading is anticipated to create a low 30-to-1 slope. Staff checked the slope around a PG&E tower southeast of the Aloft hotel. There were several cracks up to an inch wide around the tower's foundation. In a couple, warm air was felt rising from the crack. Around 1 crack, the soil appeared to be discolored. The consultant informed staff that they will be performing cover maintenance to seal the cracks this month. Staff observed the Mound 2 area, in which the excess cover was used as borrow material for construction activities. The top of the mound, now a low rise, was replaced with a GCL cap plus 1+ feet of cover soil and hydroseeded. Due to construction activities, some of the leachate wells were cut and re-capped. Once development activities that may affect the wells is completed, all the wells will be re-surveyed, estimated to be in November.

Title Description Comment:	Site Inspection - Staff inspected the PG&E tower in the southeast portion of site. New cracks in the ground were noted. These are expected to be repaired this year. Staff inspected the newly developed recreational areas between Buildings 3 and 4 and the parking structure. Some buckling of tiles on the surface was noted. Staff observed the current status of the ecotone along the shoreline. The land was more broad, vegetated and only steep right at the shoreline. Staff was given a tour of the landfill gas monitoring and venting system in Building 3.

Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: AGRICULTURAL - ORCHARD
Potential Media Affected: SOIL
Potential Contamin of Concern:

ARSENIC
DDT
LEAD

Site History:

The site was used as an orchard beginning before 1939. In the 1980s, office buildings were constructed at the site and occupied by various electronics and semiconductor manufacturing companies. Environmental site assessments have identified pesticide, arsenic, and lead impacts to shallow soil at the site. No impacts to groundwater have been detected.

The various parcels that comprise the project site have been redeveloped with different uses:
-Parcel C (4041 North First Street) has been developed into a public park, which is overseen by DTSC for ongoing operation and maintenance activities, including the annual inspection and maintenance of the surface to ensure underlying impacted soils remain are not accessed.
-Parcel A (4145 North First Street and 55 Vista Montana) has been developed into a multifamily residential complex. DTSC will oversee ongoing operation and maintenance activities, which will include the annual inspection and maintenance of the surface cap and on-site buildings, to ensure underlying impacted soils remain are not accessed.
-Parcel B1/B2 (81 Vista Montana and 305 Tasman Drive) has been developed into a multifamily residential complex, small public park, and public right of way street. DTSC will oversee ongoing operation and maintenance activities, which will include the annual inspection and maintenance of the surface cap and on-site buildings containing subterranean parking, to ensure underlying impacted soils are not accessed.

Comments:	DTSC certified the completion of the removal action at the Parcel C Operable Unit. Parcel C has been developed into a public park. A clean cap of varying thickness and materials (depending on use within the park) spans the entire parcel to prevent human contact with soil containing elevated levels of arsenic. Operation and maintenance to preserve the cap integrity will be implemented under an Operation and Maintenance Agreement between the City of San Jose, Equity Residential (developer), and DTSC. A Land Use Covenant restricting sensitive uses on Parcel C was recorded with the Santa Clara County Assessors Office on 09/03/2015.

Site History:

The site is owned by the City of Santa Clara. The site consists of flat, open fields lying south of Highway 237, north of the closed All Purpose Landfill, and between Great America Parkway and Lafayette Street. Yerba Buena Way cuts it in an eastwest direction. Historically, this site has been marshland. In the early 1950's, it was developed as a charcoal factory and then a crating facility. Support equipment for the now closed All Purpose landfill was stored on this site and included gasoline and diesel fuel storage.

Date Completed: 8/5/2003
Comments: RMDL - Remedial Action approved. Approximately 15,636 cubic yards of polycyclic aromatic hydrocarbons (PAHs)-impacted material was placed in the consolidation cell and capped with a minimum of 2 feet of clean soil, and approximately 16,247 cubic yards of PAHs-impacted material, along with approximately 3,860 cubic yards of petroleum hydrocarbon-impacted soil, was excavated and removed offsite. Yerba Buena Way contained PAHs-impacted material. The Yerba Buena Way and the consolidation cell required deed restrictions and operation and maintenance. An Operation and Maintenance Plan was approved for the Consolidation Cell and Yerba Buena Way.

Comments: The City of Santa Clara performed a cap inspection on February 18, 2014 in accordance with the Operations and Maintenance Plan. The inspection noted that, with the exception of the west end, the consolidation cell cap is in very good condition with few visible cracks or deterioration that would allow surface to penetrate through the cap. The west end of the consolidation cell is being reconstructed to be within the property boundaries. The Yerba Buena Way (now Great American Parkway) cap surfaces were in satisfactory condition.

Site History:

The site is owned by the City of Santa Clara. The site consists of flat, open fields lying south of Highway 237, north of the closed All Purpose Landfill, and between Great America Parkway and Lafayette Street. Yerba Buena Way cuts it in an eastwest direction. Historically, this site has been marshland. In the early 1950's, it was developed as a charcoal factory and then a crating facility. Support equipment for the now closed All Purpose landfill was stored on this site and included gasoline and diesel fuel storage.

Site History:

The site is owned by the City of Santa Clara. The site consists of flat, open fields lying south of Highway 237, north of the closed All Purpose Landfill, and between Great America Parkway and Lafayette Street. Yerba Buena Way cuts it in an eastwest direction. Historically, this site has been marshland. In the early 1950's, it was developed as a charcoal factory and then a crating facility. Support equipment for the now closed All Purpose landfill was stored on this site and included gasoline and diesel fuel storage.

Cleanup Status: INACTIVE - NEEDS EVALUATION AS OF 8/1/2008
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: AGRICULTURAL - ORCHARD, AGRICULTURAL - ROW CROPS
Potential Media Affected: SOIL
Potential Contamin of Concern:

ARSENIC
DDD
DDE
DDT
DIELDRIN

Site History:

DTSC received a Request for Agency Oversight Application for the Site in February 2007 and prepared a Voluntary Cleanup Agreement (VCA) with Sobrato Development Companies (Sobrato) to oversee further investigation and cleanup of the Site. Sobrato did not enter into the VCA or proceed with further investigation and cleanup. A January 2007 Phase I Environmental Site Assessment for the Site indicates there were conceptual plans for high density residential development of the Site. During historical soil sampling, DDT, DDD, DDE, arsenic, and lead were detected in soil above residential screening levels and were attributed to the former agricultural use of the Site. Supertex began operating on the Site in 1999 and manufactured semiconductor components. In a February 18, 2016 letter to Supertex, the County of Santa Clara Department of Environmental Health acknowledged the closure of the facility. The Phase I ESA Report noted no significant concerns were identified regarding hazardous materials use and storage at the Supertex facility. The building where Supertex operated remains on the Site and the Site has not been redeveloped.

Evaluations

Eval Date: 08/19/2020
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Fremont City Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

This is a new building and address with a diesel powered generator. Due to CV 19 SIP, a remote inspection was conducted on the building exterior and building owner/operator provided photo documentation of all critical Fire and Life Safety systems: FACP, Fire Sprinkler System and certification, Fire Extinguishers, Fire Pumps, Mechanical room with diesel generator and tank.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Site History:

Site History: The former VMC America/IHT Corporation (IHT) was a semiconductor related devices manufacturing company that has been in operation until it was sold to VIA Technologies in 2001. The former company performed vacuum metallurgical plating processes. On September 25, 1995, IHT submitted an onsite hazardous waste treatment initial notification of intent to operate. A facility specific notification form to operate under Conditional Authorization (CA) was submitted on September 28, 1995. On October 25, 1995 Department of Toxic Substances Control (DTSC) granted an initial authorization. On May 21, 1997 DTSC conducted a conditionally authorized notifier inspection. A review of DTSC files indicated that IHT have not submitted to DTSC a Phase 1 Environmental Assessment Checklist for the facility.

On May 16, 1996 Alameda County Health Agency (ACHA) conducted an inspection at IHT and on June 11, 1996 the company submitted a written response with resolutions to ACHA. In 1996 ACC Environmental Consultants, Inc. (ACC), on behalf of Mission Court Property Owner conducted a subsurface soil and ground water investigation to comply with Alameda County Water District (ACWD) Cooperative Agreement, June 27, 1996. ACC submitted to ACWD, a Phase II Environmental Soil and Groundwater Sampling Report, dated September 18, 1996; and Groundwater Monitoring Report Gibson Speno Management Company for Metropolitan Insurance Company, dated May 30, 1996. ACWD reviewed the reports and sent a letter dated October 30, 1996, requesting company to submit quarterly reports detailing efforts to investigate and remediate soil and groundwater contamination. On May 4, 1998 ACC submitted an annual ground water monitoring report dated April 30, 1998 to ACWD and a copy of the report to Regional Water Quality Control Board (RWQCB). On June 3, 1999, ACWD referred the case to RWQCB stating that ACWD's investigation has revealed that a plume of tetrachloroethylene (PCE) has migrated to the site from an off-site source. ACWD recommended that the site owners will cooperate in providing access to appropriate monitoring wells for the purpose of investigation and remediation of PCE. Based on ACWD referral of the case to RWQCB, DTSC determines that no further action is necessary at this time.

Title Description Comment: Inspection of test pile areas to address concerns with Penetration Evaluation work plan. Staff observed access issues at test areas, lack of surface expression of almost all test piles, evidence that 3 test piles noted to be outside of landfill footprint in the Penetration Evaluation work plan may be within the footprint, and a tree within the footprint

of Test Pad 2, raising a question of the presence of a concrete pad under the entire soil pile. Staff also noticed tear in Parcel 4 Pond liner.

Title Description Comment: Site Inspection of Leachate Well Installation. Staff met consultants and driller at well L-18 location in Parcel 2. The consultant informed staff that several feet of saturated refuse was encountered in the bottom of all 7 leachate wells installed in Parcel 4, and that the installation of several of those wells was stalled due to high concentrations of methane emanating from the borehole. While staff were at L-18, drilling was also halted after penetrating 9 feet due to high methane concentrations. After the gas dissipated, drilling resumed but was stalled again at 13 feet due to high methane concentrations. Landfill gas escaping from the borehole may be a concern that the landfill gas extraction system is not creating a negative pressure at this and the other locations. The consultant informed staff that of the 6 original leachate wells that are proposed to be destroyed, only 2 (L-2 in Parcel 2 and L-5 in Parcel 4) had "indications" detected by geophysical methods and will be further searched by excavation. The consultant also informed staff that the survey data for the original leachate wells is not tied to a known survey system or marker. Staff informed the consultant that if the 2 wells can be located, they might be able to use their locations as reference points to locate the others. Staff also requested the consultant to consider re-surveying existing wells along with the new wells (groundwater and leachate). This is to assure accuracy in water level measurements since the existing wells have not been surveyed in many years and may have settled.

Title Description Comment:	Site Inspection - Leachate monitoring wells and eastside surface water sampling locations. The purpose of the inspection was to locate leachate collection wells and eastside surface water collection points with staff from Golder and assess current status. Golder and Regional Board staff tried to locate leachate wells L-5 and L-6 in Parcel 4, but they could not be found. Leachate wells L-3 and L-4 in Parcel 2 were thought to be located, but turned out to not be the leachate wells (they were likely landfill gas condensation wells). We did not have time to look for L-1 (Parcel 1) or L-2 (Parcel 2). Staff went to the SW-3 and SW-4 surface water sampling locations along the eastside drainage ditch. There was water ponded in the ditch. It was not certain if the water (and bottom of ditch) was low enough to intercept groundwater (or seeping leachate) versus just collecting surface water runoff. This will need to be assessed in the self-monitoring plan.

Title Description Comment: Site Inspection - Parcel 4 and 3/6 When staff looked at the flow in San Tomas Aquino Creek, it was clearly flowing

south (tidal influx). This means that surface water sample detections might not be representative of clearly upgradient or downgradient sources. The pond at Parcel 4 appeared to have a plastic liner, which was exposed along some of the shoreline. The integrity of the liner is unknown, as well as whether the water level could, at some point in time or location, overtop the liner. On top of the southern slope of Parcel 3/6, there were squirrels and a number of borings from rodents into the surface. At a number of locations in Parcel 4 and 3/6, there were stormwater drainage grates in low spots to prevent ponding. The stormwater system (pipeline layout and backfill material) needs to be located to understand where potential vertical and horizontal preferential pathways might exist for landfill gas migration. Whether this could impact the effectiveness of the proposed replacement landfill gas extraction system or the results of the pilot tests should be assessed. Presumably, these drain lines will not be deep enough to intersect groundwater/leachate, but that should be confirmed.

Title Description Comment: Site inspection of Penetration Evaluation implementation Staff observed the soil core laid out from the exploratory soil boring adjacent to Test Pad 2. Refuse was observed from about 12 to 24 feet. At least one sandy zone below the refuse was identified by the onsite geologist. The soil boring appeared to be about 20-25 feet from the nearest test piles (A9 and A11). The geologist onsite noted some grout fragments mixed in the recovered core at a depth of about 40 feet (the adjacent piles are 58 feet deep). Also, from 50 to 65 feet, there was only 5 feet of soil recovery. This may be a significant data gap if no other water-bearing zone is identified below refuse. At the time of observation, there was no free water in the boring, although the sonic casing was still in the hole to the total depth, which would inhibit water infiltration except through the bottom of the casing. In the refuse was a newspaper with a date in October 1968, hence dating the refuse in this area. Staff also observed post-drilling cleanup at Test Pad 1A/1B area. There was a lot of ponding from the recent rain and deep mud ruts. There may also have been tire damage to an irrigation valve box, though it wasn't known if this was a cause of water ponding on the surface. Small areas of ponding were noticed elsewhere on Parcel 4.

Title Description Comment: Site Inspection of Test Piles. Inspected the drilling of DDP test pile #T7 and a couple associated reaction piles. Some landfill debris appears to be dragged to the bottom of the hole by the drill bit. Depths to the top and bottom of the landfill are estimates at best. Occasional whiffs of landfill gas were noticeable during drilling. The only soil cuttings came from the 4' pilot auger hole and minor material that adhered to the drill stem above the bowled-out bit, which included some landfill debris. The nearest boring log to this location is at least 100' away. The estimated depth to the base of the landfill here was 22' and total drilled depth was 47'. Spoils are piled on plastic with a plastic cover and labeled by borehole (unlike spoils from APGRD test piles, which were deposited on the ground and

partially covered). The spoils pile for T12 had 20 ppm VOCs in the airspace under the cover, recorded on a portable RAE meter (0% LEL, 20.9% O2). Field staff said that when T11 was drilled, they ran out of concrete and had to abandon the hole, move 8' over and reinstall. Also pile test at TA1 hit an irrigation water line, which was repaired, but not before water ponded and seeped into the ground.

Site History:

The North First Street Site is an area immediately around the site has been developed for light high-tech industrial purposes. A large residential development is located a quarter of a mile to the east of the site and a trailer park is located a quarter of a mile to the north. Prior to the development of the industrial park, the land around the site was used for agricultural purposes. A farm complex associated with a pear orchard was situated approximately where the Cypress building is now located. Former residents of the area, interviewed during the preparation of the preliminary assessment of the site, indicated that there may have been a fumigation shed at the farm complex. Contaminants are thought to stem from the agricultural activities rather than any activities of the present owners. During a routine ground water quality assessment in Dec. 1983, the property owners, Oakmead Investors I, discovered elevated levels of ethylene dibromide (EDB) in a ground water sample taken from one well (MW3) at the site.

Comments: Delisted Site. Although the state MCL of .05 ppb for ethylene dibromide (EDB) in drinking water was not met (421 ppb EDB was detected in monitoring well #3), the state chose the "no further action" alternative based on the results of the RI which indicated that the EDB at the site does not pose a signifigant risk to the public health, safety,

or the environment. An aquitard separates waters from the upper, saturated, EDB contaminated zone from those of the lower aquifer. Because of its high salinity, the upper, contaminated water is not likely to be used for drinking water even if the EDB was not present. EDB has been found only in one well (#3). Land around the site has been covered by parking lots, landscaping, or buildings such that no native soils are evident at the surface. Below this is 1.5-3.5 feet of non-native fill brought in during the development of the industrial park. The contamination appears to be historical in nature, rather than on-going, so contamination should decrease with time. EDB breaks down into non-carcenogenic, less toxic compounds. Its half-life is anywhere from 5 days to fourteen years. Since public health, welfare, and the environment are not threatened by the site, implementation of removal or remedial measures was deemed not necessary. The site is in limited monitoring involving the sampling and analysis of 5 ground water wells for a period of 10 years.

Comments: The Remedial Action Plan approved by DTSC in 1989 specified that groundwater monitoring would be conducted on a yearly basis for ten years or until ethylene dibromide (EDB) was not detected in any of the monitoring wells for two consecutive sampling events. The Final Annual Groundwater Monitoring Report, dated January 31, 1994, showed that four quarters of groundwater monitoring had non-detects of EDB. Therefore, DTSC approved the cessation of the groundwater monitoring program at the site.

Eval Notes:

New business inspection conducted on July 15, 2021 of the indoor service bay (see written record of inspection). The fuel island was inspected for compliance with Fire Code and APSA Programs. Six dispenser and two AST annular VR 208 sensors tested for audible visual alarm at VR TLS 450 Panel. Four VR vapor pot sensors not installed and must be tested and function prior to fueling. Once Fremont Special Haz Mat Inspector, Joelle Hurlston inspects the fuel island and requires no further action, FFD/CUPA will allow fueling operations to commence under the following conditions: 1. All 4 vapor pot sensors are functioning and provide audible/visual at VR Panel. 2. A signed and stamped SPCC is submitted to to FFD for review.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Potential Contamin of Concern:

ARSENIC
COBALT
LEAD
NICKEL

Site History:

Approximately from 1939 until 1985 the site was used for agricultural activity. A commercial/light industrial building was constructed1985-1987 at the site and has been used by mixed commercial/industrial tenants. The site is planned for redevelopment and has applied for DTSC oversight for the demolition of existing building and construction of 287 apartments and 42 townhome condominiums starting in July 2024. A 2022 limited subsurface assessment identified metal impacts (arsenic, cobalt, lead and nickel) to shallow soil from its previous agricultural usage, likely as a by-product of chemical fertilizers. SP (8/19/2022)

9/23/2022: Scoping meeting (RP, Roux, DTSC PM&GSU) - Phase I and limited soils data reviewed. Site characterization need to be completed-. Supplemental Site Investigation WP needed to evaluate- site. CEQA and tribal related documentation to be completed in collaboration with the lead agency(san Jose).

10/7/2022: Signed SVA and FA check received for the sight oversight.

Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: F007
Waste Code Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Waste Code Details

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: F007
Waste Code Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: D008
Waste Code Description: LEAD

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 11/04/2015.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 08/09/2015. Tank assessment not available on site 8/9/2015--facility verified that tank was installed on 8/2011

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in

contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Site occupies approximately 1.87 acres corresponding to APN 097-46-019. Current Site features a single-story commercial building approximately 29,034 square feet. Site was historically used for agricultural purposes from approximately the late 1930's until the late 1970's. In the late 1970's, the existing building was constructed and has been occupied by various light industrial businesses. These tenants used hazardous materials like coolants, lubricants, oils, and cleaners. Coatek, Incorporated (Coatek) was the most recent former tenant of the four westernmost units at the Site. From November 1989 through January 2016, Coatek produced printed circuit boards which used heavy metals, acids, bases, cyanide, and other chemicals. Cyanide was detected in soil above the soil leaching to groundwater environmental screening level. A remedial excavation within the building was completed to remove cyanide contaminated soil to below the leaching screening level. Redevelopment is being proposed with subsurface parking garage. Due to shallow groundwater, it is likely that dewatering will need to occur during redevelopment. Groundwater in the area contaminated and the appropriate precautions should be taken to prevent contaminated groundwater migration from off-site during dewatering activities. A Soil and Groundwater Management Plan should be followed to mitigate potential health and safety risks associated with residual contamination during property redevelopment.
