Subject: Please choose the Environmentally Superior Alternative for the Power Santa Clara Valley project

Dear California Public Utilities Commission,

The Draft Environmental Impact Report (EIR) for the Power Santa Clara Valley Project identified Alternative Combination 1 (AC-1), which locates the Grove terminal at the PG&E Metcalf Substation, as the Environmentally Superior Alternative. The CPUC should choose AC-1 as the preferred path forward for the Power Santa Clara Valley Project.

Locating the Grove terminal at the Metcalf Substation instead of on an orchard in Coyote Valley would significantly reduce the environmental impacts of the project. There is no reason to bulldoze an orchard, dig a trench along nearly a mile of the Coyote Creek Trail, and bore a tunnel underneath Coyote Creek for the additional 1.2-mile-long transmission line that will be needed if the terminal is built on the site under the project as proposed. All of this would increase the cost of the overall project – a cost that would be passed on to the public.

Coyote Valley forms a critical landscape linkage for wildlife to migrate between the Santa Cruz Mountains and the Diablo Range. Numerous scientific studies support conserving all of Coyote Valley as protected open space to ensure the environmental and economic vitality of the greater San José area. Santa Clara County voters agree and have consistently and overwhelmingly demonstrated their support for conservation of Coyote Valley.

The Coyote Valley orchard that would be the site for the terminal under the project as proposed is right next to Coyote Creek, which is the backbone of the wildlife corridor through Coyote Valley. Animals that depend on the creek corridor to be able to migrate from the Santa Cruz Mountains to the Diablo Range would be subjected to noise, nighttime lighting, human activity, and other disturbances from the construction and operation of the energy facility.

Monterey Road, where this orchard site is located, is already a wildlife roadkill hotspot. The highest incidence of bobcats, badgers, coyotes, deer, and other animals being killed by cars is right around this location, proving that animals are desperately trying to get across Monterey Road to the safety of Coyote Creek on the other side. Putting a 6-acre energy facility in the path of these animals will only make this problem worse.

Please choose AC-1 as the preferred path forward for the Power Santa Clara Valley Project.

Sincerely,
Kevin Golden

Santa Clara County voters agree and have consistently and overwhelmingly demonstrated their support for conservation of Coyote Valley.

The Coyote Valley orchard that would be the site for the terminal under the project as proposed is right next to Coyote Creek, which is the backbone of the wildlife corridor through Coyote Valley. Animals that depend on the creek corridor to be able to migrate from the Santa Cruz Mountains to the Diablo Range would be subjected to noise, nighttime lighting, human activity, and other disturbances from the construction and operation of the energy facility.

Monterey Road, where this orchard site is located, is already a wildlife roadkill hotspot. The highest incidence of bobcats, badgers, coyotes, deer, and other animals being killed by cars is right around this location, proving that animals are desperately trying to get across Monterey Road to the safety of Coyote Creek on the other side. Putting a 6-acre energy facility in the path of these animals will only make this problem worse.

Please choose AC-1 as the preferred path forward for the Power Santa Clara Valley Project.

Sincerely,
Colleen Hamilton

Subject: Please choose the Environmentally Superior Alternative for the Power Santa Clara Valley project

Dear California Public Utilities Commission,

The Draft Environmental Impact Report (EIR) for the Power Santa Clara Valley Project identified Alternative Combination 1 (AC-1), which locates the Grove terminal at the PG&E Metcalf Substation, as the Environmentally Superior Alternative. The CPUC should choose AC-1 as the preferred path forward for the Power Santa Clara Valley Project.

Locating the Grove terminal at the Metcalf Substation instead of on an orchard in Coyote Valley would significantly reduce the environmental impacts of the project. There is no reason to bulldoze an orchard, dig a trench along nearly a mile of the Coyote Creek Trail, and bore a tunnel underneath Coyote Creek for the additional 1.2-mile-long transmission line that will be needed if the terminal is built on the site under the project as proposed. All of this would increase the cost of the overall project – a cost that would be passed on to the public.

Coyote Valley forms a critical landscape linkage for wildlife to migrate between the Santa Cruz Mountains and the Diablo Range. Numerous scientific studies support conserving all of Coyote Valley as protected open space to ensure the environmental and economic vitality of the greater San José area. Santa Clara County voters agree and have consistently and overwhelmingly demonstrated their support for conservation of Coyote Valley.
