Appendix B.
Electric and Magnetic Fields

This page intentionally left blank.

ELECTRIC AND MAGNETIC FIELDS

The California Public Utilities Commission (CPUC) and the California Department of Health Services (CDHS) have not concluded that exposure to magnetic fields from utility electric facilities is a health hazard. Many reports have concluded that the potential for health effects associated with electric and magnetic field (EMF) exposure is too speculative to allow the evaluation of impacts or the preparation of mitigation measures.

EMF is a term used to describe electric and magnetic fields that are created by electric voltage (electric field) and electric current (magnetic field). Power frequency EMF is a natural consequence of electrical circuits, and can be either directly measured using the appropriate measuring instruments or calculated using appropriate information.

ELECTRIC FIELDS

Electric fields are present whenever voltage exists on a wire, and are not dependent on current. The magnitude of the electric field is primarily a function of the configuration and operating voltage of the line and decreases with the distance from the source (line). The electric field can be shielded (i.e., the strength can be reduced) by any conducting surface, such as trees, fences, walls, buildings, and most types of structures. The strength of an electric field is measured in volts per meter (V/m) or kilovolts per meter (kV/m).

MAGNETIC FIELDS

Magnetic fields are present whenever current flows in a conductor, and are not dependent on the voltage present on the conductor. The strength of these fields also decreases with distance from the source. However, unlike electric fields, most common materials have little shielding effect on magnetic fields.

The magnetic field strength is a function of both the current on the conductor and the design of the system. Magnetic fields are measured in units called Gauss. However, for the low levels normally encountered near power systems, the field strength is expressed in a much smaller unit, the milligauss (mG), which is one thousandth of a Gauss.

Power frequency EMF is present where electricity is used. This includes not only utility transmission lines, distribution lines, and substations, but also the building wiring in homes, offices, and schools, and in the appliances and machinery used in these locations. Typical magnetic fields from these sources can range from below 1 mG to above 1,000 mG (1 Gauss).

Magnetic field strengths diminish with distance. Fields from compact sources (i.e., those containing coils such as small appliances and transformers) decrease in inverse proportion to the distance from the source cubed. For three-phase power lines with balanced currents, the magnetic field strength drops off inversely proportional to the distance from the line squared. Fields from unbalanced currents, which flow in paths such as neutral or ground conductors, fall off inversely proportional to the distance from the source. Conductor spacing and configuration also affect the rate at which the magnetic field strength decreases.

The magnetic field levels of PG&E's overhead and underground transmission lines will vary depending upon customer power usage. Magnetic field strengths for typical PG&E transmission line loadings at the edge of rights-of-way are approximately 10 to 90 mG. Under peak load conditions, the magnetic fields at the edge of the right-of-way would not likely exceed 150 mG. There are no long-term, health-based state or federal government EMF exposure standards. State regulations for magnetic fields have been developed in New York and Florida (150 mG and 200 mG at the edge of the right-of-way). However, these are based on limiting exposure from new facilities to levels no greater than existing facilities.

The strongest magnetic fields around the outside of a substation come from the power lines entering and leaving the station. The strength of the magnetic fields from transformers and other equipment decreases quickly with distance. Beyond the substation fence, the magnetic fields produced by the equipment within the station are typically indistinguishable from background levels.

POSSIBLE HEALTH EFFECTS

The possible effects of EMF on human health have come under scientific scrutiny. Concern about EMF originally focused on electric fields; however, much of the recent research has focused on magnetic fields. Uncertainty exists as to what characteristics of magnetic field exposure need to be considered to assess human exposure effects. Among the characteristics considered are field intensity, transients, harmonics, and changes in intensity over time. These characteristics may vary from power lines to appliances to home wiring, and this may create different types of exposures. The exposure most often considered is intensity or magnitude of the field.

There is a consensus among the medical and scientific communities that there is insufficient evidence to conclude that EMF causes adverse health effects. Neither the medical nor scientific communities have been able to provide any foundation upon which regulatory bodies could establish a standard or level of exposure that is known to be either safe or harmful. Laboratory experiments have shown that magnetic fields can cause biologic changes in living cells, but scientists are not sure whether any risk to human health can be associated with them. Some studies have suggested an association between surrogate measures of magnetic fields and certain cancers while others have not.

CALIFORNIA PUBLIC UTILITIES COMMISSION DECISION SUMMARY

Background

On January 15, 1991, the CPUC initiated an investigation to consider its role in mitigating the health effects, if any, of electric and magnetic fields from utility facilities and power lines. A working group of interested parties, called the California EMF Consensus Group, was created by the CPUC to advise it on this issue. It consisted of 17 stakeholders representing citizens groups, consumer groups, environmental groups, state agencies, unions, and utilities. The Consensus Group's fact-finding process was open to the public, and its report incorporated concerns expressed by the public. Its recommendations were filed with the Commission in March 1992.

In August 2004, the CPUC began a proceeding known as a "rulemaking" (R.04-08-020) to explore whether changes should be made to existing CPUC policies and rules concerning EMF from electric transmission lines and other utility facilities.

Through a series of hearings and conferences, the Commission evaluated the results of its existing EMF mitigation policies and addressed possible improvements in implementation of these policies. The CPUC also explored whether new policies are warranted in light of recent scientific findings on the possible health effects of EMF exposure.

The CPUC completed the EMF rulemaking in January 2006 and presented these conclusions in Decision D.06-01-042:

- The CPUC affirmed its existing policy of requiring no-cost and low-cost mitigation measures to reduce EMF levels from new utility transmission lines and substation projects.
- The CPUC adopted rules and policies to improve utility design guidelines for reducing EMF, and provides for a utility workshop to implement these policies and standardize design guidelines.
- Despite numerous studies, including one ordered by the Commission and conducted by the California Department of Health Services, the CPUC stated "we are unable to determine whether there is a significant scientifically verifiable relationship between EMF exposure and negative health consequences."
- The CPUC said it will "remain vigilant" regarding new scientific studies on EMF, and if these studies indicate negative EMF health impacts, the Commission will reconsider its EMF policies and open a new rulemaking if necessary.

In response to a situation of scientific uncertainty and public concern, the decision specifically requires PG&E and NEET West to consider "no-cost" and "low-cost" measures, where feasible, to reduce exposure from new or upgraded utility facilities. It directs that no-cost mitigation measures be undertaken, and that low-cost options, when they meet certain guidelines for field reduction and cost, be adopted through the project certification process. PG&E and NEET West were directed to develop, submit, and follow EMF guidelines to implement the CPUC decision. Four percent of total project budgeted cost is the benchmark in implementing EMF mitigation, and mitigation measures should achieve incremental magnetic field reductions of at least 15 percent.

REVIEWS OF EMF STUDIES

Hundreds of EMF studies have been conducted over the last 20 years in the areas of epidemiology, animal research, cellular studies, and exposure assessment. A number of nationally recognized multi-discipline panels have performed comprehensive reviews of the body of scientific knowledge on EMF. These panels' ability to bring experts from a variety of disciplines together to review the research gives their reports recognized credibility. It is standard practice in risk assessment and policymaking to rely on the findings and consensus opinions of these distinguished panels. None of these groups have concluded that EMF causes

adverse health effects or that the development of standards were appropriate or would have a scientific basis.

Reports by the National Research Council/National Academy of Sciences, American Medical Association, American Cancer Society, National Institute of Environmental Health Sciences, World Health Organization, International Agency for Research on Cancer, and California Department of Health Services conclude that insufficient scientific evidence exists to warrant the adoption of specific health-based EMF mitigation measures. The potential for adverse health effects associated with EMF exposure is too speculative to allow the evaluation of impacts or the preparation of mitigation measures.

NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES

In June of 1999, the federal government completed a $60-million EMF research program managed by the National Institute of Environmental Health Sciences (NIEHS) and the Department of Energy (DOE). Known as the EMF RAPID (Research And Public Information Dissemination) Program. In their report to the U.S. Congress, the NIEHS concluded that:

> The NIEHS believes that the probability that extremely low frequency (ELF)-EMF exposure is truly a health hazard is currently small. The weak epidemiological associations and lack of any laboratory support for these associations provide only marginal, scientific support that exposure to this agent is causing any degree of harm.

The NIEHS report also included the following conclusions:

> The National Toxicology Program routinely examines environmental exposures to determine the degree to which they constitute a human cancer risk and produces the 'Report on Carcinogens' listing agents that are 'known human carcinogens' or 'reasonably anticipated to be human carcinogens.' It is our opinion that based on evidence to date, ELF-EMF exposure would not be listed in the 'Report on Carcinogens' as an agent 'reasonably anticipated to be a human carcinogen.' This is based on the limited epidemiological evidence and the findings from the EMF-RAPID Program that did not indicate an effect of ELF-EMF exposure in experimental animals or a mechanistic basis for carcinogenicity.
>
> The NIEHS agrees that the associations reported for childhood leukemia and adult chronic lymphocytic leukemia cannot be dismissed easily as random or negative findings. The lack of positive findings in animals or in mechanistic studies weakens the belief that this association is actually due to ELF-EMF, but cannot completely discount the finding. The NIEHS also agrees with the conclusion that no other cancers or non-cancer health outcomes provide sufficient evidence of a risk to warrant concern.
>
> Epidemiological studies have serious limitations in their ability to demonstrate a cause and effect relationship whereas laboratory studies, by design, can clearly show that cause and effect are possible. Virtually all of the laboratory evidence in animals and humans and most of the mechanistic work done in cells fail to support a causal relationship between exposure to ELF-EMF at environmental

> levels and changes in biological function or disease status. The lack of consistent, positive findings in animal or mechanistic studies weakens the belief that this association is actually due to ELF-EMF, but it cannot completely discount the epidemiological findings.
>
> The NIEHS suggests that the level and strength of evidence supporting ELF-EMF exposure as a human health hazard are insufficient to warrant aggressive regulatory actions; thus, we do not recommend actions such as stringent standards on electric appliances and a national program to bury all transmission and distribution lines. Instead, the evidence suggests passive measures such as a continued emphasis on educating both the public and the regulated community on means aimed at reducing exposures. NIEHS suggests that the power industry continue its current practice of siting power lines to reduce exposures and continue to explore ways to reduce the creation of magnetic fields around transmission and distribution lines without creating new hazards. We also encourage technologies that lower exposures from neighborhood distribution lines provided that they do not increase other risks, such as those from accidental electrocution or fire.

U.S. National Research Council/ National Academy of Sciences

In May 1999, the National Research Council/ National Academy of Sciences, an independent scientific agency responsible for advising the federal government on science, technology, and medicine, released its evaluation of the scientific and technical content of research projects conducted under the U.S. EMF RAPID Program, concluding that:

> The results of the EMF-RAPID program do not support the contention that the use of electricity poses a major unrecognized public-health danger. Basic research on the effects of power-frequency magnetic fields on cells and animals should continue, but a special research-funding effort is not required. Investigators should compete for funding through traditional research-funding mechanisms. If future research on this subject is funded through such mechanisms, it should be limited to tests of well-defined mechanistic hypotheses or replications of reported positive effects. If carefully performed, such experiments will have value even if their results are negative. Special efforts should be made to communicate the conclusions of this effort to the general public effectively.

The following specific recommendations are made by the committee:

1. The committee recommends that no further special research program focused on possible health effects of power-frequency magnetic fields be funded. Basic research on the effects of power-frequency magnetic fields on cells and animals should continue but investigators should compete for funding through traditional research funding mechanisms.
2. If, however, Congress determines that another time-limited, focused research program on the health effects of power-frequency magnetic fields is warranted, the committee recommends that emphasis be placed on replications of studies that have yielded

scientifically promising claims of effects and that have been reported in peer-reviewed journals. Such a program would benefit from the use of a contract-funding mechanism with a requirement for complete reports and/or peer-reviewed publications at program's end.

3. The engineering studies were initiated without the guidance of a clearly established biologic effect. The committee recommends that no further engineering studies be funded unless a biologic effect that can be used to plan the engineering studies has been determined.
4. Much of the information from the EMF-RAPID biology program has not been published in peer-reviewed journals. NIEHS should collect all future peer-reviewed information resulting from the EMF-RAPID biology projects and publish a summary report of such information periodically on the NIEHS Web site.
5. The communication effort initiated by EMF-RAPID is reasonable. The two booklets and the telephone information line are useful, as is the EMF-RAPID Internet site. There are two limitations to the effort. First, it is largely passive, responding to inquiries and providing information, rather than being active. Second, much of the information produced is in a scientific format not readily understandable by the public. The committee recommends that further material produced to disseminate information on power-frequency magnetic fields be written for the general public in a clear fashion. The Web site should be made more user-friendly. The booklet *Questions and Answers about EMF* should be updated periodically and made available to the public.

World Health Organization

The World Health Organization (WHO) established the International EMF Project in 1996 to investigate potential health risks associated with exposure to electric and magnetic fields (EMF). A WHO Task Group recently concluded a review of the health implications of ELF-EMF.

A Task Group of scientific experts was convened in 2005 to assess any risks to health that might exist from exposure to ELF electric and magnetic fields. Previously in 2002, the International Agency for Research on Cancer (IARC) examined the evidence regarding cancer; this Task Group reviewed evidence for a number of health effects, and updated the evidence regarding cancer. The conclusions and recommendations of the Task Group are presented in a WHO report titled: "Extremely Low Frequency Fields Environmental Health Criteria Monograph No.238" and Factsheet No 322.

> "New human, animal and in vitro studies, published since the 2002 IARC monograph, do not change the overall classification of ELF magnetic fields as a possible human carcinogen."
>
> "A number of other diseases have been investigated for possible association with ELF magnetic field exposure. These include cancers in both children and adults, depression, suicide, reproductive dysfunction, developmental disorders, immunological modifications and neurological disease. The scientific evidence supporting a linkage between ELF magnetic fields and any of these diseases is much weaker than for childhood leukemia and in some cases (for example, for

cardiovascular disease or breast cancer) the evidence is sufficient to give confidence that magnetic fields do not cause the disease."

"the epidemiological evidence is weakened by methodological problems, such as potential selection bias. In addition, there are no accepted biophysical mechanisms that would suggest that low-level exposures are involved in cancer development. Thus, if there were any effects from exposures to these low-level fields, it would have to be through a biological mechanism that is as yet unknown. Additionally, animal studies have been largely negative. Thus, on balance, the evidence related to childhood leukemia is not strong enough to be considered causal."

"Policy-makers should establish an ELF EMF protection program that includes measurements of fields from all sources to ensure that the exposure limits are not exceeded either for the general public or workers."

"Government and industry should monitor science and promote research program to further reduce the uncertainty of the scientific evidence on the health effects of ELF field exposure."

"Policy-makers, community planners and manufacturers should implement very low-cost measures when constructing new facilities and designing new equipment including appliances."

"Changes to engineering practice to reduce ELF exposure from equipment or devices should be considered, provided that they yield other additional benefits, such as greater safety, or little or no cost."

"When changes to existing ELF sources are contemplated, ELF field reduction should be considered alongside safety, reliability and economic aspects."

International Agency for Research on Cancer

In June of 2001, the International Agency for Research on Cancer (IARC), a branch of the World Health Organization (WHO), evaluated the carcinogenic risk to humans of static and extremely low-frequency EMF. In October of 2001, the WHO published a Fact Sheet that summarized the IARC findings. Below is an excerpt from the fact sheet:

In June 2001, an expert scientific working group of IARC reviewed studies related to the carcinogenicity of static and ELF electric and magnetic fields. Using the standard IARC classification that weighs human, animal and laboratory evidence, ELF magnetic fields were classified as possibly carcinogenic to humans based on epidemiological studies of childhood leukemia. Evidence for all other cancers in children and adults, as well as other types of exposures (i.e. static fields and ELF electric fields) was considered not classifiable either due to insufficient or inconsistent scientific information.

"Possibly carcinogenic to humans" is a classification used to denote an agent for which there is limited evidence of carcinogenicity in humans and less than sufficient evidence for carcinogenicity in experimental animals.

This classification is the weakest of three categories ("is carcinogenic to humans", "probably carcinogenic to humans" and "possibly carcinogenic to humans") used by IARC to classify potential carcinogens based on published scientific evidence. Some examples of well-known agents that have been classified by IARC are listed below in Table B-1.

Table B-1. Potential Carcinogens Classified by IARC

Classification	Examples of Agents
Carcinogenic to humans (usually based on strong evidence of carcinogenicity in humans)	Asbestos Mustard gas Tobacco (smoked and smokeless) Gamma radiation
Probably carcinogenic to humans (usually based on strong evidence of carcinogenicity in animals)	Diesel engine exhaust Sun lamps UV radiation Formaldehyde
Possibly carcinogenic to humans (usually based on evidence in humans which is considered credible, but for which other explanations could not be ruled out)	Coffee Styrene Gasoline engine exhaust Pickled Vegetables ELF magnetic fields

DO ELF FIELDS CAUSE CANCER?

ELF fields are known to interact with tissues by inducing electric fields and currents in them. This is the only established mechanism of action of these fields. However, the electric currents induced by ELF fields commonly found in our environment are normally much lower than the strongest electric currents naturally occurring in the body such as those that control the beating of the heart.

Since 1979 when epidemiological studies first raised a concern about exposures to power line frequency magnetic fields and childhood cancer, a large number of studies have been conducted to determine if measured ELF exposure can influence cancer development, especially leukemia in children.

There is no consistent evidence that exposure to ELF fields experienced in our living environment causes direct damage to biological molecules, including DNA. Since it seems unlikely that ELF fields could initiate cancer, a large number of investigations have been conducted to determine if ELF exposure can influence cancer promotion or co-promotion. Results from animal studies conducted so far suggest that ELF fields do not initiate or promote cancer.

However, two recent pooled analyses of epidemiological studies provide insight into the epidemiological evidence that played a pivotal role in the IARC evaluation. These studies suggest that, in a population exposed to average magnetic fields in excess of 0.3 to 0.4 μT, twice as many children might develop leukemia compared to a population with lower exposures. In spite of the large number data base, some uncertainty remains as to whether magnetic field

> exposure or some other factor(s) might have accounted for the increased leukemia incidence.
>
> Childhood leukemia is a rare disease with 4 out of 100,000 children between the ages of 0 to 14 diagnosed every year. Also average magnetic field exposures above 0.3 or 0.4 μT in residences are rare. It can be estimated from the epidemiological study results that less than 1 percent of populations using 240 volt power supplies are exposed to these levels, although this may be higher in countries using 120 volt supplies.
>
> The IARC review addresses the issue of whether it is feasible that ELF-EMF pose a cancer risk. The next step in the process is to estimate the likelihood of cancers in the general population from the usual exposures and to evaluate evidence for other (non-cancer) diseases. This part of the risk assessment should be finished by WHO in the next 18 months.

American Cancer Society

In the journal, *A Cancer Journal for Clinicians*, the American Cancer Society (ACS) reviewed EMF residential and occupational epidemiologic research in an article written by Dr. Clark W. Heath, Jr., ACS's vice president of epidemiology and surveillance research. Dr. Heath reviews 13 residential epidemiologic studies of adult and childhood cancer. Dr. Heath wrote:

> Evidence suggesting that exposure to EMF may or may not promote human carcinogenesis is mostly based on...epidemiologic observations.... While those observations may suggest such a relationship for leukemia and brain cancer in particular, the findings are weak, inconsistent, and inconclusive.... The weakness and inconsistent nature of epidemiologic data, combined with the continued dearth of coherent and reproducible findings from experimental laboratory research, leave one uncertain and rather doubtful that any real biologic link exists between EMF exposure and carcinogenicity.

American Medical Association

The AMA adopted recommendations of its Council on Scientific Affairs (CSA) regarding EMF health effects. The report was prepared as a result of a resolution passed by AMA's membership at its 1993 annual meeting. The following recommendations are based on the CSA's review of EMF epidemiologic and laboratory studies to date, as well as on several major literature reviews:

- Although no scientifically documented health risk has been associated with the usually occurring levels of electromagnetic fields, the AMA should continue to monitor developments and issues related to the subject.
- The AMA should encourage research efforts sponsored by agencies such as the National Institutes of Health, the U.S. Department of Energy, and the National Science Foundation. Continuing research should include study of exposures to EMF and its effects, average public exposures, occupational exposures, and the effects of field surges and harmonics.

- The AMA should support the meeting of an authoritative, multidisciplinary committee under the auspices of the National Academy of Sciences or the National Council on Radiation Protection and Measurements to make recommendations about exposure levels of the public and workers to EMF and radiation.

Project Description:

We are requesting a record search of the Sacred Lands File and a list of appropriate Native American contacts for NextEra Energy Transmission West's Estrella Substation Project located in San Luis Obispo County, California. There are three proposed study areas that fall within the Estrella USGS 7.5 quadrangles. Two of the study areas are located approximately 3 miles east of the City of Paso Robles, adjacent and just north of Union Road. The third location is approximately 6.5 miles northeast of the City of Paso Robles and is adjacent to Estrella Road. Specifically, the project study areas are situated on Township 26 South, Range 13 East, Sections 11, 28, and 29 (MDBM). Please see the attached project location maps.

RE: Proposed NextEra Energy Transmission West Estrella Substation Project (Project #32347), near the City of Paso Robles, Estrella USGS Quadrangle, San Luis Obispo County, California

Dear Ms. Montero:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties. Please note that the intent above reference codes is to mitigate impacts to tribal cultural resources, as defined, for California Environmental Quality Act (CEQA) projects.

As of July 1, 2015, Public Resources Code Sections 21080.3.1 and 21080.3.2 require public agencies to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose mitigating impacts to tribal cultural resources:

> Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section. (Public Resources Code Section 21080.3.1(d))

The law does not preclude agencies from initiating consultation with the tribes that are culturally and traditionally affiliated with their jurisdictions. The NAHC believes that in fact that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

In accordance with Public Resources Code Section 21080.3.1(d), formal notification must include a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation. The NAHC believes that agencies should also include with their notification letters information regarding any cultural resources assessment that has been completed on the APE, such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

   - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE;
   - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
   - If the probability is low, moderate, or high that cultural resources are located in the APE.
   - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE; and
   - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

   - Any report that may contain site forms, site significance, and suggested mitigation measurers.

     All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for pubic disclosure in accordance with Government Code Section 6254.10.

3. The results of any Sacred Lands File (SFL) check conducted through Native American Heritage Commission. A search of the SFL was completed for the USGS quadrangle information provided with negative results.

4. Any ethnographic studies conducted for any area including all or part of the potential APE; and

5. Any geotechnical reports regarding all or part of the potential APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS is not exhaustive, and a negative response to these searches does not preclude the existence of a cultural place. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the case that they do, having the information beforehand well help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance we are able to assure that our consultation list contains current information.

If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.
Associate Governmental Program Analyst

RE: The Proposed Estrella Substation Interconnection Project, San Miguel, Paso Robles, Templeton, Estrella, and Creston USGS Quadrangles, San Luis Obispo County, California

To whom it may concern:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties. Please note that the intent above reference codes is to mitigate impacts to tribal cultural resources, as defined, for California Environmental Quality Act (CEQA) projects.

As of July 1, 2015, Public Resources Code Sections 21080.3.1 and 21080.3.2 require public agencies to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose mitigating impacts to tribal cultural resources:

> Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the **lead agency** shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section. (Public Resources Code Section 21080.3.1(d))

The law does not preclude agencies from initiating consultation with the tribes that are culturally and traditionally affiliated with their jurisdictions. The NAHC believes that in fact that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

In accordance with Public Resources Code Section 21080.3.1(d), formal notification must include a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation. The NAHC believes that agencies should also include with their notification letters information regarding any cultural resources assessment that has been completed on the APE, such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

   - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE;
   - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
   - If the probability is low, moderate, or high that cultural resources are located in the APE.
   - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE; and

- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

   - Any report that may contain site forms, site significance, and suggested mitigation measurers.

     All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for pubic disclosure in accordance with Government Code Section 6254.10.

3. The results of any Sacred Lands File (SFL) check conducted through Native American Heritage Commission. A search of the SFL was completed for the USGS quadrangle information provided with negative results.

4. Any ethnographic studies conducted for any area including all or part of the potential APE; and

5. Any geotechnical reports regarding all or part of the potential APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS is not exhaustive, and a negative response to these searches does not preclude the existence of a cultural place. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the case that they do, having the information beforehand well help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance we are able to assure that our consultation list contains current information.

If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.

This list is current only as of the date of this document.
Distribution of this list does not relieve any person of statutory responsibility as defined in Section 7050.5 of the Health and Safety Code, Section 5097.94 of the Public Resources Code and Section 5097.98 of the Public Resources Code.

This list applicable only for consultation with Native American tribes under Public Resources Code Sections 21080.3.1 for the proposed Estrella Substation Interconnection Project, San Miguel, Paso Robles, Templeton, Estrella and Creston USGS Quadrangles, San Luis Obispo County, California.

Appendix E.
Nesting Bird Species Specific Buffers

This page intentionally left blank.

Nesting Birds: Species-Specific Buffers for PG&E Activities

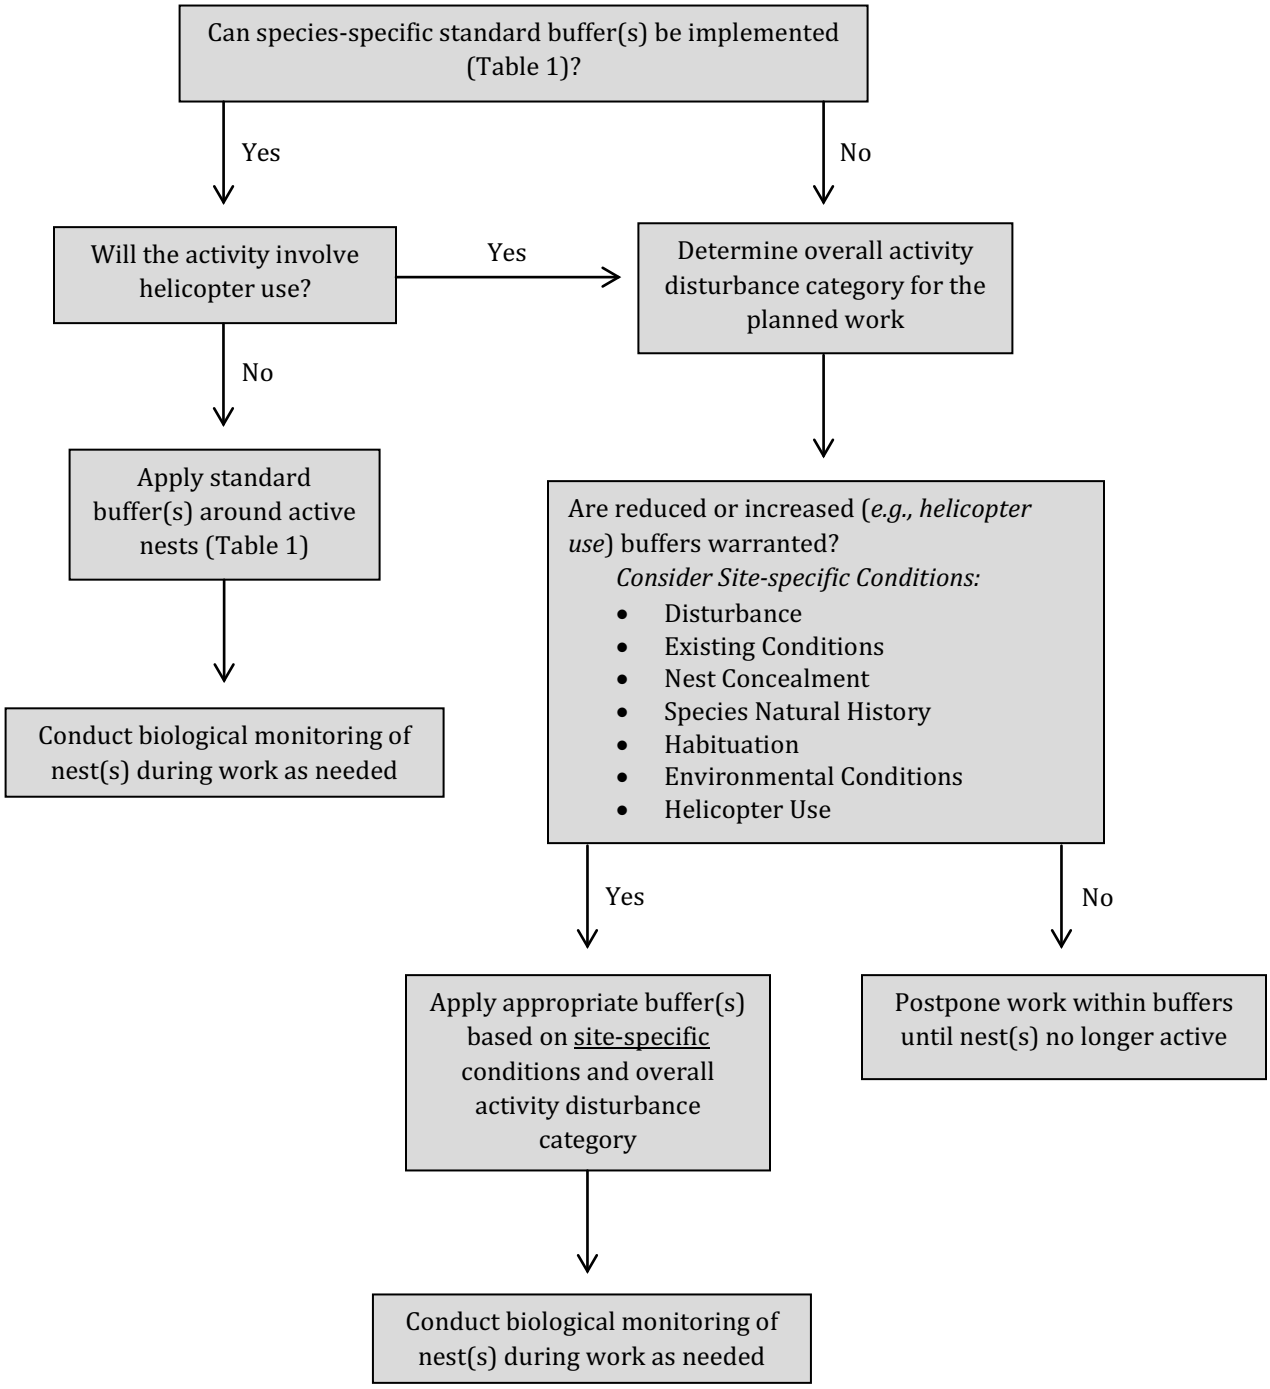
Within PG&E's Avian Program, standard nest buffers were developed for all common and special-status birds present within its Service Territory. There are no standard nest buffers specified in the Migratory Bird Treaty Act (MBTA) or within California Fish and Game Code. Table 1 provides nest buffers based on the best available information, including relevant literature review and avian biology. Disturbance factors including *nest location*, *human activity*, *activity duration*, and *noise level* may influence nesting behavior and reproductive success, and were each considered in establishing standard buffer distances for individual species. Where regulatory agencies have provided information on nest buffer distances for special-status species, those buffer distances are primarily used as *standard buffers* in Table 1. *Standard buffers* are species-specific buffer distances between occupied nest sites and work activities where work will not occur while the nest is active (containing eggs or young). These standard buffers are intended to be applied to nests located in proximity to PG&E activities at a sufficient distance to provide suitable nest protection. For example, a nesting black-crowned night heron has a standard buffer distance of 400 feet (Table 1).

Because it is not always possible to apply the standard buffer, non-standard species-specific buffer distances have also been established. As part of the determination of these non-standard buffers, PG&E activities are assigned disturbance rankings (Low, Medium, or High) for each factor identified above. Evaluation of all disturbance factors combined produces an overall disturbance category by assessing each disturbance factor for one or more PG&E activities. If the overall disturbance category is high, the standard buffer will generally apply. If the evaluation results in low or medium overall disturbance categories, the standard buffer is applied as feasible or reduced buffers may be appropriate. For example, in some circumstances it may be necessary to perform certain types of work within the standard buffer. In these cases, biologists consider all relevant site-specific conditions, including the species' tolerance for disturbance, work activity type, noise levels, and distance to nest to determine if reducing the standard buffer is appropriate. Alternatively, the buffer may be increased beyond the standard buffer for certain exceptions. Helicopters are the main exception that may require increased buffers.

Table 1 lists the standard buffers and non-standard buffer ranges for activities with low-medium and medium-high disturbances. Nest buffers will be implemented and adjusted by the biologist[1].

The following site-specific conditions are considered in determining if a reduced or increased buffer is appropriate:

- **Disturbance**. Evaluate nest disturbance, including consideration of activity intensity and duration, construction type, amount of habitat disturbance, level of human disturbance or acclimation, activity length, and the amount of noise generated by the activity.
- **Existing Conditions**. Assess site conditions to determine if there is acclimation to human disturbance.
- **Nest Concealment**. Evaluate surrounding habitat for its ability to provide visual and/or acoustic barriers between the nest and construction.
- **Species Natural History**. Consider individual species' natural history, nest stage (incubation, rearing, fledging), and known tolerances to disturbance.
- **Habituation**. Consider species habituation to new or ongoing activities.
- **Environmental Conditions**. Consider weather and other related factors.
- **Helicopter Use.** Consider helicopter type, flight plans, and duration.



Nest Buffer Implementation Guidelines

Step/Task/Responsible	Outcome and Components
1. Desktop review *Biologist*	• Assess habitat types and potential nesting bird species • Identify potentially appropriate buffers for the species that may nest
2. Preconstruction nesting bird surveys *Biologist*	• Conduct preconstruction surveys within the standard buffers • Document species detections including nests and active nests
3. Assign Buffers *Biologist*	• Assess intensity/duration of activity • Assess acclimation to human disturbance • Assess site-specific conditions • Consider species' natural history, reproductive stage, tolerances to disturbance, and observed behavior • Evaluate and assign standard, reduced, or increased buffers
4. Implement Buffers *Biologist/Biological Monitor*	• Implement buffers when work activities are occurring • Conduct periodic biological monitoring where needed • Adjust buffers as appropriate

[1] Biologist refers to an individual with a bachelor's degree or above in a field related to biological sciences and demonstrated field expertise in ornithology, in particular, nesting behavior; these qualified biologists may be PG&E employees or contractors.

Species-Specific Buffers for PG&E Activities

Buffer Assignment Process – Quick Reference

Other Biological Considerations in Determining Buffers

- Provisioning frequency of hatchlings or older young
- Egg turning
- Egg incubation (female or male or combination)
- Egg hardiness
- Ambient Temperatures
- Heat tolerance (eggs or nestlings)
- Cold tolerance (eggs or nestlings)
- Unsheltered nest risk
- Premature fledging risk
- Unattended nests and predation risk

Time on Nest is Important. An egg initially requires a controlled heat input, but later in incubation the embryo may produce more heat and may need to be cooled rather than heated. Ambient temperatures need to be considered. Unattended unsheltered nests may experience temperature extremes (heat or cold). Egg turning during incubation is also a critical component for successful hatching; absence of turning during incubation will result in reduced and delayed hatching. During the nestling stage for altricial birds (i.e., birds that typically require feeding by adults), adults must provision food to nestlings. Provisioning rate is highly variable between species and is correlated to clutch size and body size, but most birds make frequent trips to attend nestlings. Collectively referred to as brooding, these forms of parental care are essential for reproductive success. Unattended nests also may experience increased rates of predation. Premature fledging is more likely to occur during later nest stages, when young are nearing fledging stage but not yet capable of flight.

Table 1. Species-specific Nest Buffers for PG&E Work Activities

**Atypically high-intensity activities, such as helicopter use usually require increased buffers beyond the standard buffer*

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Mallard	*Anas platyrhynchos*	Scrapes under overhanging cover or in dense vegetation in uplands near water.	Ground	March through June; single brood.	Clutch incubated for 26–29 days by female; young are precocial.	100	30–100	15–30
Cinnamon Teal	*Anas cyanoptera*	Scrapes under overhanging cover or in dense vegetation in uplands near water.	Ground	April through August; single brood.	Clutch incubated for 24–25 days by female; young are precocial.	100	30–100	15–30
Canada Goose	*Branta canadensis*	Scrapes on slightly elevated, firm ground in uplands near water.	Ground	February through June; single brood.	Clutch incubated for 27–28 days by female; young are precocial.	100	30–100	15–30
Wood Duck	*Aix sponsa*	Cavities in riparian woodlands and other woodland habitats near water.	Up to 60 feet	April through August; single or double brood.	Clutch incubated for 27–35 days by female; young are precocial.	100	30–100	15–30
Blue-winged Teal	*Anas discors*	Scrapes in dense grass or forbs in wetlands or grasslands near water.	Ground	June through July; single brood	Clutch incubated for 23–24 days by female; young are precocial.	100	30–100	15–30
Northern Shoveler	*Anas clypeata*	Scrapes in low grasses or forbs in uplands near water.	Ground	March through July; single brood.	Clutch incubated for 25–27 days by female; young are precocial.	100	30–100	15–30
Gadwall	*Anas strepera*	Scrapes in dense, low emergent vegetation or grasses in uplands near water.	Ground	April through July; single brood.	Clutch incubated for 22–29 days by female; young are precocial.	100	30–100	15–30
American Wigeon	*Anas americana*	Scrapes in dense vegetation cover in uplands near water.	Ground	May through July; single brood.	Clutch incubated for 24–25 days by female; young are precocial.	100	30–100	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Redhead	*Aythya americana*	Platform nests over water in dense vegetation; occasionally nests in uplands near water.	Ground	April through June; single brood.	Clutch incubated for 24–26 days by both sexes; young are precocial.	100	30–100	15–30
Ring-necked Duck	*Aythya collaris*	Platform nests over water in dense emergent vegetation in wetlands.	Ground	May through August; single brood.	Clutch incubated for approximately 26 days by female; young are precocial.	100	30–100	15–30
Common Merganser	*Mergus merganser*	Cavities in trees, snags and stumps in riparian woodlands.	Up to 200 feet	March through September; single brood.	Clutch incubated for 28–32 days by female; young are precocial.	100	30–100	15–30
Ruddy Duck	*Oxyura jamaicensis*	Platform nests constructed on shallow water in dense, tall emergent vegetation.	Ground	April through October; single or double brood.	Clutch incubated for approximately 23 days by female; young are precocial.	100	30–100	15–30
Pied-billed Grebe	*Podilymbus podiceps*	Platform nests constructed in emergent vegetation bordering open water.	Ground	March through July; double brood.	Clutch incubated for approximately 23 days by both sexes; young are precocial.	100	30–100	15–30
Eared Grebe	*Podiceps nigricollis*	Platform nests in water on emergent wetland vegetation.	Ground	April through July; single brood.	Clutch incubated for approximately 21 days by both sexes by both sexes; young are precocial.	100	30–100	15–30
Western Grebe	*Aechmophorus occidentalis*	Platform nests in emergent vegetation or open water or, less frequently, on dry land near water.	Ground	May through August; single brood.	Clutch incubated for approximately 23 days by both sexes; young are precocial.	100	30–100	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Clark's Grebe	*Aechmophorus clarkii*	Platform nests constructed in emergent vegetation or open water or, less frequently, on dry land near water.	Ground	May through August; single brood.	Clutch incubated for approximately 23 days by both sexes; young are precocial.	100	30–100	15–30
Double-crested Cormorant	*Phalacrocorax auritus*	Platform nests on islands, on the ground or in trees; also in power poles and other artificial structures. Colonial nester.	Ground	March through August; single brood.	Clutch incubated for 25–29 days by both sexes; altricial young fledge at 37–44 days.	400	75–400	50–75
Pelagic Cormorant	*Phalacrocorax pelagicus*	Platform nests on steep cliffs along rocky and exposed shorelines along outer coasts, bays, inlets, estuaries, rapids, coves, surge narrows, harbors, lagoons, and coastal log-storage sites. Colonial nester.	Ground	April through August; single or double brood	Clutch incubated for 28–32 days by both sexes; altricial young fledge at approximately 47 days	400	75–400	50–75
American Bittern	*Botaurus lentiginosus*	Platform nests in shallow water or on ground near water.	Ground	April through July; single brood.	Clutch incubated for approximately 24 days by female; altricial young fledge at approximately 14 days.	100	50–100	25–50
Least Bittern	*Ixobrychus exilis*	Platform nests about a foot above the water in freshwater marshes.	Ground	March through July; double brood.	Clutch incubated for 16–19 days by both sexes; altricial young fledge at 13–15 days.	100	50–100	25–50

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Great Blue Heron	*Ardea herodias*	Platform nests in tall trees or other types of vegetation near water. Colonial nester.	Up to 130 feet	January through July; single brood.	Clutch incubated for 25–29 days by both sexes; altricial young fledge at approximately 60 days.	400	75–400	50–75
Great Egret	*Ardea alba*	Platform nests in tall trees or other types of vegetation near water. Colonial nester.	10–80 feet	March through July; single brood.	Clutch incubated for approximately 26 days; semi-altricial young fledge at approximately 35–42 days.	400	75–400	50–75
Snowy Egret	*Egretta thula*	Platform nests in tall trees or other types of vegetation near water. Colonial nester.	Up to 30 feet but usually 10–15 feet	March through July; single brood.	Clutch incubated for 20–24 days by both sexes; semi-altricial young fledge at 21–28 days.	400	75–400	50–75
Cattle Egret	*Bubulcus ibis*	Platform nests in tall shrubs and trees near water.	Up to 30 feet but usually 5–15 feet	April to July; single brood.	Clutch incubated for 23–25 days; semi-altricial young fledge at about 40 days.	400	75–400	50–75
Green Heron	*Butorides striatus*	Platform nests in shrubs, trees, thickets, or other vegetation near water.	10–30 feet, sometimes higher	March through July; single or double brood.	Clutch incubated for 19–21 days by both sexes; semi-altricial young fledge at 21–23 days.	100	50–100	25–50
Black-crowned Night-Heron	*Nycticorax*	Platform nests in shrubs, trees, thickets, or other vegetation near water. Colonial nester.	Up to 150 feet	January through June; double brood.	Clutch incubated for approximately 24 days by female; semi-altricial young fledge at 42–49 days.	400	75–400	50–75
White-faced Ibis	*Plegadis chihi*	Platform nests of emergent wetland vegetation in extensive wetlands. Colonial nester.	Ground	May to July; single brood.	Clutch incubated for 20–26 days by both sexes; altricial young fledge at 10–12 days.	400	75–400	50–75

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Turkey Vulture	*Cathartes aura*	Caves, rock crevices, possibly abandoned buildings, or other dark, secluded sites.	Up to 20 feet	March through June; single brood.	Clutch incubated for 37–41 days by both sexes; semi-altricial young fledge at approximately 77 days.	300	100–300	50–100
California Condor	*Gymnogyps californianus*	Caves on high, remote cliff-faces or in hollow in large redwood snag.	Cliff	Year-round, with egg-laying usually occurring in January or February; single brood.	Clutch incubated for 42–50 days by both sexes; semi-altricial young fledge at 35–49 days.	3,960	CR[a]	CR
White-tailed Kite	*Elanus caeruleus*	Platform nests in tall trees near grasslands, oak savannah, or other open habitats.	12–60 feet	February through July; sometimes double brood.	Clutch incubated for 28–30 days by both sexes; semi-altricial young fledge at 34–40 days.	300	200–300	100–200
Osprey	*Pandion haliaetus*	Platform nests on treetops, rocky outcrops, or utility poles near water.	Up to 60 feet	Mid-March through August; single brood.	Clutch incubated for 32–33 days by both sexes; semi-altricial young fledge at 51–59 days.	300	100–300	50–100
Bald Eagle	*Haliaeetus leucocephalus*	Platform nests in large trees or rocky outcrops close to lakes and large rivers.	50–180 feet	January to August; single brood.	Clutch incubated for 35–46 days by both sexes; semi-altricial young fledge at 70–77 days.	2,640	CR	CR
Northern Harrier	*Circus cyaneus*	Platform nests on ground in grasslands and open marshland with vegetative cover.	Ground	March through August; single brood.	Clutch incubated for 29–39 days by both sexes; altricial young fledge at 37 days.	300	200–300	100–200
Sharp-shinned Hawk	*Accipiter striatus*	Platform nests in trees in riparian woodland or other forested habitat with thick cover.	10–60 feet	April through August; single brood.	Clutch incubated for 30–35 days by both sexes; semi-altricial young fledge at approximately 23 days.	300	100–300	50–100

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Cooper's Hawk	*Accipiter cooperii*	Platform nests in trees in riparian woodlands or other forested habitat.	20–60 feet	March through July; single brood.	Clutch incubated for 36 days by female while male provisions her; semi-altricial young fledge at 30–34 days.	300	100–300	50–100
Northern Goshawk	*Accipiter gentilis*	Platform nests in top of tall coniferous or deciduous trees in mature forest.	Up to 75 feet	April through August; single brood.	Clutch incubated for 36–41 days by female while male provisions her; semi-altricial young fledge at 45 days old	1,320	200–1,320	100–200
Red-shouldered Hawk	*Buteo lineatus*	Platform nests below canopy in a variety of tree species.	20–60 feet	March through June; single brood.	Clutch incubated for 23–25 days by both sexes; semi-altricial young fledge at 35–42 days.	300	100–300	50–100
Swainson's Hawk	*Buteo swainsoni*	Platform nests in isolated trees in grasslands and agricultural areas.	5–30 feet	April through late June; single brood.	Clutch incubated for approximately 28 days by both sexes; semi-altricial young fledge at 28–35 days.	1,320–2,640	CR	CR
Red-tailed Hawk	*Buteo jamaicensis*	Platform nests in tall trees and other structures in a variety of open habitats.	35–90 feet	February through September; single brood.	Clutch incubated for 28–32 days by both sexes; semi-altricial young fledge at approximately 42 days.	250	100–300	50–100
Ferruginous Hawk	*Buteo regalis*	Nest in substrates ranging from cliffs, trees, utility structures, and farm buildings to haystacks and relatively level ground.	Up to 70 feet	Early March through May; single brood	Clutch incubated for 32–33 days by both sexes; altricial and nidicolous young fledge at 38–50 days.	300	100–300	50–100

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Golden Eagle	*Aquila chrysaetos*	Platform nests on rock ledges of outcrops or cliffs, and occasionally trees, in proximity to grassland, farmland, oak savannah, and other foraging grounds.	10–100 feet or higher on cliffs	February through July; single brood.	Clutch incubated for 43–45 days by female and occasionally male; semi-altricial young fledge at 63–70 days.	2,640	CR	CR
American Kestrel	*Falco sparverius*	Cavities in trees or other structures near grasslands, agricultural areas, oak savannah, or other open areas.	7–80 feet	March through July; may double brood.	Clutch incubated for 29–30 days by female while male provisions her; semi-altricial young fledge at approximately 30 days.	200	50–200	25–50
Prairie Falcon	*Falco mexicanus*	Ledges under overhangs on rock outcrops or cliffs near grassland, farmland, oak savannah, or other foraging habitat.	30–40 feet	March to May; single brood.	Clutch incubated for 29–31 days by female while male provisions her; semi-altricial young fledge at 40 days.	300	100–300	50–100
American Peregrine Falcon	*Falco peregrinus*	Cliff ledges, tall buildings, high bridges, and other high locations near open habitats.	High on cliffs or tall structures	March through June; single brood.	Clutch incubated for 28–29 days by both sexes; semi-altricial young fledge at 35–42 days.	500	CR	CR
Mount Pinos Sooty Grouse	*Dendragapus fuliginosus*	Scrapes near logs, shrubs, or other cover in coniferous forests, shrub-steppe habitat, and subalpine forests.	Ground	April through August; single brood.	Clutch incubated for 26–28 days by female; young are precocial.	100	50–100	25–50
Ruffed Grouse	*Bonasa umbellus*	Scrapes near the base of stumps, trees, or logs in forested habitat.	Ground	February through August; single brood.	Clutch incubated for approximately 24 days by female; young are precocial.	100	50–100	25–50

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Wild Turkey	*Meleagris gallopavo*	Scrapes in thick, low vegetation in oak woodlands and forest edges and clearings.	Ground	March through August; single brood.	Clutch incubated for approximately 28 days by female; young are precocial.	100	30–100	15–30
Gambel's Quail	*Callipepla gambellii*	Scrapes under shrubs in desert habitats.	Ground	April through June; single or (rarely) double brood	Clutch incubated for 21–23 days by female while male guards; young are precocial.	100	50–100	25–50
California Quail	*Callipepla californica*	Scrapes under shrubs in riparian woodland, coastal scrub, chaparral, shrub-steppe, and mixed-hardwood forest.	Ground	March through July; single or double brood.	Clutch incubated for 21–23 days by female; young are precocial.	100	50–100	25–50
Mountain Quail	*Oreortyx pictus*	Scrapes under shrubs in mountain woodland and scrub habitats, usually near water.	Ground	April through June; single brood.	Clutch incubated for 24–25 days by female; young are precocial.	100	50–100	25–50
California Black Rail	*Laterallus jamaicensis coturniculus*	Cup nests on or near ground at upper edges of tidal marshes.	0–1 foot	March through July; single brood.	Clutch incubated for 17–20 days by both sexes; young are semi-precocial.	300–600	CR	CR
Clapper Rail (California, Yuma, Light-footed)	*Rallus longirostris obscurus/yumanensis/levipes*	Platform nests in dense tidal marsh vegetation dominated by cordgrass or gumplant.	0–1 foot	February through August; single or double brood.	Clutch incubated for 23–29 days by both sexes; young are semi-precocial.	700	CR	CR
Virginia Rail	*Rallus limicola*	Platform nests in dense emergent vegetation in freshwater or estuarine marshes.	0–1 foot	April through June; single or double brood.	Clutch incubated for 14–16 days by both sexes; young are precocial.	100	50–100	25–50
Sora	*Porzana carolina*	Cup nests secured to reeds and rushes in freshwater or estuarine marshes.	0–1 foot	April through August; single brood.	Clutch incubated for approximately 14 days by both sexes; young are precocial.	100	50–100	25–50

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Common Gallinule	*Gallinula galeata*	Platform nests in dense vegetation at edge of marshes and other freshwater habitats.	Ground or water level	April through June; single or double brood.	Clutch incubated for 19–22 days by both sexes; young are precocial.	100	50–100	25–50
American Coot	*Fulica americana*	Platform nests in dense vegetation at edge of marshes and other freshwater habitats.	Ground or water level	March through July; single or double brood.	Clutch incubated for 21–24 days by both sexes; young are precocial.	100	30–100	15–30
Greater Sandhill Crane	*Grus canadensis tabida*	Platform nests in wetland vegetation on dry ground or shallow water in extensive marsh systems or grasslands.	Ground	April through August; single brood.	Clutch incubated for approximately 30 days by both sexes; young are precocial.	500	CR	CR
Western Snowy Plover	*Charadrius alexandrinus nivosus*	Scrapes on sand beaches/bars, salt pannes, or dry river beds.	Ground	April through August; double or triple brood.	Clutch incubated for approximately 24 days by both sexes; young are precocial.	600 (coastal) 300 (interior)	CR (coastal) 200–300 (interior)	CR (coastal) 100–200 (interior)
Killdeer	*Charadrius vociferus*	Scrapes in open places usually in areas with short grass, sand, or gravel.	Ground	March through June; sometimes double brood.	Clutch incubated for 24–26 days by both sexes; young are precocial.	75	30–75	15–30
Black-necked Stilt	*Himantopus mexicanus*	Scrapes or plant tufts/ tussocks in fresh, brackish, or salt marshes.	Ground	April through June; single brood.	Clutch incubated for 25–26 days by both sexes; young are precocial.	150	50–150	25–50
American Avocet	*Recurvirostra americana*	Scrapes on salt pannes, dikes, levees, and bare islands.	Ground	April through June; single brood.	Clutch incubated for 22–24 days by both sexes; young are precocial.	150	50–150	25–50

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Spotted Sandpiper	*Actitis macularia*	Scrapes in grasses among rocks, wrack, or driftwood.	Ground	April through August; single brood.	Clutch incubated for approximately 21 days by male; young are precocial.	75	30–75	15–30
Wilson's Snipe	*Gallinago gallinago*	Scrapes in dense, medium to tall marshy or wet meadow vegetation.	Ground	April to August; single brood.	Clutch incubated for 17–20 days by female; young are precocial.	75	30–75	15–30
Lesser Yellowlegs	*Tringa flavipes*	Scrapes on shallow wetlands, trees or shrubs, and open areas.	Ground	Late April to mid-May; single brood.	Clutch incubated for 22–23 days by both sexes; young are precocial.	75	30–75	15–30
Whimbrel	*Numenius phaeopus*	Hummocks or mounds near dwarfed shrub, flat heath tundra, in grass or sedge tussocks, and on gravel.	Ground	Early June to early July; single brood.	Clutch incubated 22–28 days by both sexes; young are precocial.	75	30–75	15–30
Black Skimmer	*Rynchops niger*	Saucer-shaped depressions on beaches, bars, dredge deposition, salt marsh.	Ground	May through August; single brood.	Clutch incubated 21–23 days by both sexes; young are semi-precocial.	300	100–300	50–100
Long-billed Curlew	*Numenius americanus*	Scrapes in short-grass or mixed-prairie habitat with flat to rolling topography.	Ground	Mid-late March to early July; single brood.	Clutch incubated for 27–29 days by both sexes; young are precocial.	75	30–75	15-30
Marbled Godwit	*Limosa fedoa*	Scrapes in short, sparsely to moderately vegetated landscapes that include native grassland and wetland complexes with a variety of wetland classes (ephemeral to semipermanent).	Ground	Mid-May to late June; single brood.	Clutch incubated for 23–26 days by both sexes; young are precocial	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
California Gull	*Larus californicus*	Scrapes on islands in alkali or freshwater lakes and ponds or salt ponds.	Ground	April through August; single brood.	Clutch incubated for 23–27 days by both sexes; young are precocial.	150	50–150	25–50
Western Gull	*Larus occidentalis*	Ledges on cliffs, bluffs, bridges, buildings, and other areas inaccessible to nest predators.	Ground/cliff	April through August; single brood.	Clutch incubated for 30–32 days by both sexes; young are semi-precocial.	150	50–150	25–50
Caspian Tern	*Sterna caspia*	Scrapes on islands, beaches, and levees.	Ground	April through August; single brood.	Clutch incubated for approximately 20 days by both sexes; semi-precocial young fledge at approximately 14 days.	300	100–300	50–100
Forster's Tern	*Sterna forsteri*	Scrapes on open levees, islands, and occasionally reed beds.	Ground	April through September; single brood.	Clutch incubated for approximately 23 days by both sexes; semi-altricial young fledge after approximately 7 days.	300	100–300	50–100
California Least Tern	*Sterna antillarum*	Scrapes on bare sandy or gravelly substrates in undisturbed areas.	Ground	May through June; single brood.	Clutch incubated for 20–25 days by both sexes; young are semi-precocial.	600	CR	CR
Black Tern	*Chlidonias niger*	Platform nests constructed of dead plant stems in freshwater wetlands and flooded rice fields.	Ground	May through August; single brood.	Clutch incubated for 20–22 days by both sexes; semi-precocial young fledge at approximately 14 days.	300	100–300	50–100

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Marbled Murrelet	*Brachyramphus marmoratus*	Horizontal limbs of large, old-growth conifers.	20–250 feet	March through September; likely a single brood.	Clutch incubated for approximately 30 days by both sexes; semi-precocial young fledge at approximately 21 days.	1,320 (high disturbance)[b]	CR	CR
Cassin's Auklet	*Ptychoramphus aleuticus*	Excavates burrows in soft soil, sod or natural cavities such as rock crevices and under trees, cacti or logs. Colonial nester.	Ground/cliff	Varies within November through May; single and double brood.	Clutch incubated 37–42 days by both sexes; altricial young confined to nest for 30 days.	400	75–400	50–75
Band-tailed Pigeon	*Columba fasciata*	Platform nests in trees or shrubs in oak woodlands, mixed hardwood forests, and mixed coniferous forests, usually in areas with oak trees.	5–180 feet	March through November; double or triple brood.	Clutch incubated for 18–20 days by both sexes; altricial young fledge at 25–30 days.	75	50–75	25–50
Mourning Dove	*Zenaida macroura*	Platform nests in a tree or shrub, but also on buildings or on ground, in a variety of habitats.	0–25 feet	February through September; several broods.	Clutch incubated for 14–15 days by both sexes; altricial young fledge at 13–15 days.	50	20–50	10–20
Western Yellow-billed Cuckoo	*Coccyzus americanus*	Platform nests in bushes or trees in dense, wide riparian woodlands.	2–20 feet	June through July; single brood.	Clutch incubated for 9–11 days by both sexes; altricial young fledge at 21 days.	500	CR	CR
Greater Roadrunner	*Geococcyx californianus*	Cup nests in dense, brushy habitats in desert, sagebrush, and chaparral habitats.	3–15 feet	April through June; double brood.	Clutch incubated for 16–20 days by male; altricial young fledge at 18–30 days.	100	50–100	25–50

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Barn Owl	*Tyto alba*	Cavities in trees, buildings, crevices in rocks, outcrops, cliffs and quarries.	1–400 feet	January through May; often double broods.	Clutch incubated for 32–34 days by female while male provisions her; altricial young fledge at 60 days.	150	100–150	50–100
Flammulated Owl	*Otus flammeolus*	Cavities in trees, including aspens, oaks, pines, or other trees in forested areas.	10–40 feet	May through October; single brood.	Clutch incubated for 21–24 days by female while male provisions her; altricial young fledge at 20–26 days	200	100–200	50–100
Western Screech Owl	*Otus kennicottii*	Cavities in trees, particularly cottonwoods, in open woodlands.	10–30 feet	March through June; single brood.	Clutch incubated for 21–30 days by female while male provisions her; altricial young fledge at approximately 28 days.	200	100–200	50–100
Great Gray Owl	*Strix nebulosa*	Near high elevation meadows, on broken top trees or stick nests of other species.	30-50 feet	Late March through early July; single brood	Average clutch incubated for 29.7 days by female, with male provisioning her; semi-precocial young fledge at 21-28 days but can be dependent on nest site and male parent until fall.	1,320	CR	CR
Great Horned Owl	*Bubo virginianus*	Cavities or large nest platforms of other species in trees, rock ledges, or caves.	Uses existing platforms at various heights	January through May; single brood.	Clutch incubated for 26–35 days by female while male provisions her; altricial young fledge at 28–35 days.	300	100–300	50–100

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Northern Pygmy Owl	*Glaucidium gnoma*	Cavities in trees in oak woodlands and coniferous forests.	8–20 feet	April through August; number of broods unknown.	Clutch incubated for 25–30 days by female while male provisions her; semi-altricial young fledge at approximately 23 days.	200	50–200	25–50
Spotted Owl (Northern/California)	*Strix occidentalis caurina/occidentalis*	Cavities or platforms (natural or old nests of other species) in coniferous or mixed hardwood forests.	30–165 feet	March through August; single brood.	Clutch incubated for 29–30 days by female while male provisions her; altricial young fledge at 34–36 days.	1,320 (high disturbance)[b]	CR	CR
Burrowing Owl	*Athene cunicularia*	Small mammal burrows in open grasslands or at the edge of agricultural areas.	Ground	February through August; single brood.	Clutch incubated for 27–30 days by female while male provisions her; altricial young fledge at 40–45 days.	250	CR	CR
Long-eared Owl	*Asio otus*	Platform nests built by other species high in trees in coniferous forests or mixed woodlands.	10–30 feet	February through May; single brood.	Clutch incubated for 25–30 days by female while male provisions her; altricial young fledge at 23–24 days.	300	100–300	50–100
Short-eared Owl	*Asio flammeus*	Scrapes in tall, dense vegetation in grasslands and freshwater or brackish marshes.	Ground	March through July; single or possibly double brood.	Clutch incubated for 21–28 days by female while male provisions her; semi-altricial young leave nest at 31–36 days.	300	100–300	50–100
Northern Saw-whet Owl	*Aegolius acadicus*	Cavities in trees in forested areas.	5–50 feet	March through August; single or double brood.	Clutch incubated for 21–28 days by female; semi-altricial young fledge at approximately 30 days.	200	100–200	50–100

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Lesser Nighthawk	*Chordeiles acutipennis*	Scrapes on bare gravelly or sandy ground in desert and sparsely vegetated habitats.	Ground	April through July; single or double brood.	Clutch incubated for 18–19 days by female; semi-precocial young fledge after 3 weeks.	75	30–75	20–30
Common Nighthawk	*Chordeiles minor*	Scrapes on bare gravelly or sandy ground in open areas within chaparral, grasslands, and forest openings.	Ground	June through July; double brood.	Clutch incubated for 18–20 days by female; semi-precocial young fledge after about 21 days.	75	30–75	20–30
Common Poorwill	*Phalaenoptilus nuttallii*	Scrapes on bare gravelly, sandy, or leaf-litter-covered ground in grasslands and desert habitats.	Ground	March through August; double brood.	Clutch incubated for 20–21 days by both sexes; young are precocial.	75	30–75	20–30
Black Swift	*Cypseloides niger*	Sheltered crevices or ledges on cliff faces on coast or under waterfall.	20–45 feet	May through September; single brood.	Clutch incubated for 21–27 days by both sexes; altricial young fledge at 45–49 days.	75	30–75	15–30
Vaux's Swift	*Chaetura vauxi*	Cavities in redwoods, other conifers, and occasionally sycamores, chimneys, and buildings.	Up to 50 feet	May through August; single brood.	Clutch incubated for 18–20 days; altricial young fledge at approximately 28 days.	75	30–75	15–30
White-throated Swift	*Aeronautes saxatalis*	Rock cracks and crevices on cliffs and tall bridges.	10–195 feet	May through July; single brood.	Clutch incubated for 20–27 days; altricial young fledge at 40–46 days.	75	30–75	15–30
Black-chinned Hummingbird	*Arcgilochus alexandri*	Cup nests in trees and shrubs in woodlands, urban areas, and other habitats with nectar sources.	4–10 feet	April through June; two or three broods.	Clutch incubated for 13–16 days by female; altricial young fledge at approximately 21 days.	50	20–50	15–20

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Anna's Hummingbird	*Calypte anna*	Cup nests in trees and shrubs in woodlands, urban areas, and other habitats with nectar sources.	1–30 feet	December through June; two or three broods.	Clutch incubated for 16–17 days by female; altricial young fledge at 25–26 days.	50	20–50	15–20
Costa's Hummingbird	*Calypte costae*	Cup nests in trees and shrubs in riparian scrub, urban areas, and other habitats with nectar sources.	4–5 feet	April through July; single or occasionally double brood.	Clutch incubated for 15–18 days by female; altricial young fledge at 20–23 days.	50	20–50	15–20
Calliope Hummingbird	*Stellula calliope*	Cup nests in montane or riparian woodlands.	2–70 feet	May through August; single brood.	Clutch incubated for 15–16 days by female; altricial young fledge at 21–23 days.	50	20–50	15–20
Allen's Hummingbird	*Selasphorus sasin*	Cup nests in shrubs, trees, or vines in a variety of forest and woodland types, as well as coastal scrub.	1–10 feet; occasionally as high as 90 feet	February through August; double brood.	Clutch incubated for 16–22 days by female; altricial young fledge at approximately 22 days.	50	20–50	15–20
Belted Kingfisher	*Ceryle alcyon*	Burrow in banks near fresh water.	Ground	April through July; single brood.	Clutch incubated for 23–24 days by both sexes; altricial young fledge at 30–35 days.	100	50–100	25–50
Lewis's Woodpecker	*Melanerpes lewis*	Cavities in snags or dead branches in oak woodlands and mixed hardwood forests.	5–80 feet	May through July; single brood.	Clutch incubated for 13–14 days by both sexes; altricial young fledge at 28–34 days.	50	15–50	10–15
Acorn Woodpecker	*Melanerpes formicivorous*	Cavities in trees or snags in open woodlands, partly wooded areas, or utility poles near a source of acorns.	5–25 feet	April through July; two or three broods.	Clutch incubated for approximately 11 days by both sexes; altricial young fledge at approximately 31 days.	50	15–50	10–15

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Red-breasted Sapsucker	*Sphyrapicus ruber*	Cavities in trees or snags in coniferous or mixed forest.	5–45 feet	May through June; single brood.	Clutch incubated for 12–14 days by both sexes; altricial young fledge at 23–28 days.	50	15–50	10–15
Williamson's Sapsucker	*Sphyrapicus thyroideus*	Tree cavities in conifer and mixed conifer-deciduous forests.	8–52 feet	Late April through late July; single brood.	Clutch incubated 12–14 days by both sexes; altricial young fledge at 31–32 days.	50	15–50	10–15
Ladder-backed Woodpecker	*Picoides scalaris*	Cavities in trees and cactus.	4-20 feet	Unknown in CA; single brood.	Clutch incubated 14 days by both sexes; altricial young with unknown fledging period.	50	15–50	10–15
Nuttall's Woodpecker	*Picoides nuttallii*	Cavities in trees or snags in oak woodlands, or less frequently riparian or other woodlands.	2–60 feet	April through June; single brood.	Clutch incubated for approximately 14 days by both sexes; altricial young fledge at approximately 29 days.	50	15–50	10–15
Downy Woodpecker	*Picoides pubescens*	Cavities in trees or snags in riparian or other deciduous woodlands, or less frequently in coniferous forests.	3–44 feet	April through May; double brood.	Clutch incubated for approximately 12 days by both sexes; altricial young fledge at 20–22 days.	50	15–50	10–15
Hairy Woodpecker	*Picoides villosus*	Cavities in snags or dead branches in woodlands and coniferous forests.	3–102 feet	March through August; single brood.	Clutch incubated for 11–15 days by both sexes; altricial young fledge at 28–30 days.	50	15–50	10–15
White-headed Woodpecker	*Picoides albolarvatus*	Cavities in snags or stumps at least 2 feet in diameter in pine forests.	6–50 feet	April through August; single brood.	Both sexes incubate clutch for 13–15 days; altricial young fledge at approximately 26 days.	50	15–50	10–15

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Northern Flicker	*Colaptes auratus*	Cavities in tree trunks or snags in open or sparsely wooded areas; more often in live wood.	8–45 feet	April through June; single brood.	Clutch incubated for 11–13 days by both sexes; altricial young fledge at 25–28 days.	50	15–50	10–15
Pileated Woodpecker	*Dryocopus pileatus*	Cavities in snags or dead branches in mature forests.	15–70 feet	March to July; single brood	Clutch incubated for approximately 18 days by both sexes; altricial young fledge at 26–28 days.	50	15–50	10–15
Olive-sided Flycatcher	*Contopus cooperi*	Cup nest in trees in open conifer forest or mixed woodland.	5–70 feet	June through July; single brood.	Clutch incubated for 16–17 days by female; altricial young fledge at 15–19 days.	75	30–75	15–30
Western Wood-Pewee	*Contopus sordidulus*	Cup nests in trees, mainly coniferous but sometimes deciduous woodlands near watercourses.	15–30 feet	May through July; single brood.	Clutch incubated for approximately 12 days by female; altricial young fledge at 14–18 days.	75	30–75	15–30
Willow Flycatcher (Southwestern, Little, *adastus*)	*Empidonax traillii extimus/brewsteri/adastus*	Cup nests in densely vegetated riparian associations of cottonwoods and willows.	5–20 feet	May through July; single brood.	Clutch incubated for 12–13 days by female; altricial young fledge at 14 days.	300	CR	CR
Vermilion Flycatcher	*Pyrocephalus rubinus*	Loosely constructed nest in wooded riparian areas.	8-55 feet	Mid-March through mid-July; single or double brood.	Clutch incubated for 14-15 days by female; altricial young fledge at 14-16 days.	75	30–75	15–30
Hammond's Flycatcher	*Empidonax hammondii*	Cup nests in trees in forests and woodlands.	6–65 feet	May through July; single brood.	Clutch incubated for 12–15 days by female; altricial young fledge at 17–18 days .	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Dusky Flycatcher	*Empidonax oberholseri*	Cup nests in small trees or shrubs pine forests	3–20 feet	May through July; single brood.	Clutch incubated for 12–15 days by female; altricial young fledge at approximately 18 days.	75	30–75	15–30
Western (Pacific-slope and Cordilleran) Flycatcher	*Empidonax difficilis/occidentalis*	Cup nests in cavities or tree stumps or on ledges or crevices in woodlands and forests often in riparian areas.	0–30 feet	April through July; sometimes double brood.	Clutch incubated for 14–15 days by female; altricial young fledge at 15–18 days.	75	30–75	15–30
Black Phoebe	*Sayornis nigricans*	Cup nests of mud cemented to vertical structures, often under an overhang.	3–10 feet	March through June; double brood.	Clutch incubated for 15–18 days by female; altricial young fledge at approximately 21 days.	75	30–75	15–30
Say's Phoebe	*Sayornis saya*	Cup nests on ledges with overhang or under a bridge; nest not made of mud like black phoebe.	0–79 feet	March through June; double brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 14–18 days.	75	30–75	15–30
Ash-throated Flycatcher	*Myiarchus cinerascens*	Cavities in trees and other structures in open deciduous woodland.	2–70 feet	May through July; single brood.	Clutch incubated for approximately 15 days by female; altricial young fledge at 16–17 days.	50	15–50	10–15
Cassin's Kingbird	*Tyrannus vociferans*	Cup nests in trees in savannahs and other open habitats.	25–74 feet	April through June; double brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 14 days.	75	30–75	15–30
Western Kingbird	*Tyrannus verticalis*	Cup nests in trees and artificial structures (e.g., power poles) in variety of open habitats.	13–55 feet	April through June; double brood.	Clutch incubated for 12–14 days by both sexes; altricial young fledge at 13–19 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Loggerhead Shrike	*Lanius ludovicianus*	Cup nests in dense shrubs near grasslands and other open habitats.	3–8 feet	February through June; two or three broods.	Clutch incubated for 14–16 days by female while male provisions her; altricial young fledge at 17–21 days.	75	30–75	15–30
Least Bell's Vireo	*Vireo bellii pusillus*	Cup nests in dense shrubs and small trees in dense riparian areas.	1–3 feet	April through August; double brood.	Clutch incubated for approximately 14 days by both sexes; altricial young fledge at 10–12 days.	500	CR	CR
Arizona Bell's Vireo	*Vireo bellii arizonae*	Cup nests in dense shrubs and small trees in dense riparian areas.	1–3 feet	April through August; double brood.	Clutch incubated for approximately 14 days by both sexes; altricial young fledge at 10–12 days.	500	CR	CR
Cassin's Vireo	*Vireo cassinii*	Cup nests in a trees or shrubs in oak or oak-coniferous or mixed riparian woodland.	5–35 feet	April through July; single brood.	Clutch incubated for approximately 15 days by both sexes; altricial young fledge at 13 days.	75	30–75	15–30
Hutton's Vireo	*Vireo huttoni*	Cup nests on a twig forks in oaks and other trees along streams and canyons.	3–45 feet	March thorugh June; single or double brood.	Clutch incubated for 14–16 days by both sexes; altricial young fledge at approximately 14 days.	75	30–75	15–30
Warbling Vireo	*Vireo gilvus*	Cut nests high in trees in mature oak woodlands and mixed deciduous forests.	20–60 feet	May through July; double brood.	Clutch incubated for 12–13 days by both sexes; altricial young fledge at approximately 14 days.	75	30–75	15–30
Gray Vireo	*Vireo vicinior*	Nests in thorn scrub or pinyon-juniper woodland, low in thorny or twiggy shrub or tree.	2–8 feet	Mid-April through mid-August	Clutch incubated 13-14 days by both sexes; altricial young fledge at 13-14 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Gray Jay	*Perisoreus canadensis*	Cup nests in shrubs or trees in coniferous forests and sometimes oak woodlands.	5–30 feet	March through July; single brood.	Clutch is incubated for 16–18 days; altricial young fledge at approximately 15 days.	75	30–75	15–30
Steller's Jay	*Cyanocitta stelleri*	Cup nests in trees or shrubs in coniferous or mixed hardwood forests or other woodlands.	7–16 feet	April through June; likely single brood.	Clutch incubated for approximately 16 days by female while male provisions her; altricial young fledge at 18 days.	75	30–75	15–30
Western Scrub-jay	*Aphelocoma californica*	Platform nests in shrubs, trees, bushes or vine tangles in a wide variety of habitats, including oak woodlands, savannah, agricultural, and suburban.	2–50 feet	March through June; single brood.	Clutch incubated for 15–17 days by female while male provisions her; altricial young fledge at 18 days.	75	30–75	15–30
Pinyon Jay	*Gymnorhinus cyanocephalus*	Cup nests in trees in ponderosa-pine forest.	3–115 feet	Mid-March through late June; single brood.	Clutch incubated 17 days by female, male provisions female; altricial young fledge at 21–22 days.	75	30–75	15–30
Clark's Nutcracker	*Nucifraga columbiana*	Cup nests in pines, junipers, and firs in mountain coniferous forests.	8–45 feet	February through August; single brood.	Clutch incubated for 16–18 days by both sexes; altricial young fledge at approximately 22 days.	75	30–75	15–30
Yellow-billed Magpie	*Pica nuttallii*	Platform nests in oak trees and occasionally other trees in savannah.	30–80 feet	February through July; single brood.	Clutch incubated for 16–18 days by female while male provisions her; altricial young fledge at approximately 30 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
American Crow	*Corvus brachyrhynchos*	Platform nests in variety of large trees, usually near the trunk, and artificial structures in a wide variety of habitats.	10–70 feet	February through July; single brood.	Clutch incubated for approximately 18 days by female and possibly helpers; altricial young fledge at 35 days.	50	30–50	15–30
Common Raven	*Corvus corax*	Platform nests on sheltered rock ledges or in forks of large trees and artificial structures in a wide variety of habitats.	45–80 feet	February through July; single brood.	Clutch incubated for 20–21 days by female while male provisions her; altricial young fledge at 35–42 days.	50	30–50	15–30
Western Bluebird	*Sialia mexicana*	Cavities in woodland clearings, savannahs, and other open habitats.	4–48 feet	April through June; double brood.	Clutch incubated for 13–14 days by female; altricial young fledge at approximately 20 days.	50	15–50	10–15
Townsend's Solitaire	*Myadestes townsendi*	Cup nests on ground usually on cutbanks and other slopes in mountain coniferous forests.	0–12 feet	April through June; single or double brood.	Clutch incubated for 11–14 days by female; altricial young fledge at 10–14 days.	75	30–75	15–30
Swainson's Thrush	*Catharus ustulatus*	Cup nests in dense shrubs, often in riparian woodlands and mixed coniferous forests.	2–20 feet	April through August; single or (rarely) double brood.	Clutch incubated for 10–13 days by female; altricial young fledge after 10–12 days.	75	30–75	15–30
Hermit Thrush	*Catharus guttatus*	Cup nests in dense shrubs variety of forests and woodlands.	2–10 feet	June through July; single or double brood.	Clutch incubated for 12–13 days by female; altricial young fledge at 12–13 days.	75	30–75	15–30
American Robin	*Turdus migratorius*	Cup nests in trees or shrubs, ledges of buildings, or in a tree forks in variety of open habitats.	3–25 feet	May through July; two or three broods.	Clutch incubated for 11–14 days by female; altricial young fledge at 14–16 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Varied Thrush	*Ixoreus maevius*	Cup nests on horizontal branches of trees in moist coniferous forests.	5–20 feet	April through August; double brood.	Clutch incubated for approximately 14 days by female; altricial young fledge at 13–15 days.	75	30–75	15–30
Horned Lark	*Eremophila alpestris*	Scrapes in a small hollow usually sheltered by plant tufts in grasslands and other open habitats.	Ground	February through August; two or three broods.	Clutch incubated for 10–14 days by female; altricial young fledge at 9–12 days.	75	30–75	15–30
Purple Martin	*Progne subis*	Cavities in trees in mountain forests, particularly burned areas with snags.	10–34 feet	April through August; single brood	Clutch incubated for 15–18 days by the female; altricial young fledge at 24–31 days.	75	30–75	15–30
Tree Swallow	*Tachycineta bicolor*	Cavities in open habitats, such as grasslands or wetlands with dead standing trees; usually near water.	10–16 feet	April through August; double brood.	Clutch is incubated for 13–16 days; altricial young fledge at 16–20 days.	50	30–50	15–30
Violet-green Swallow	*Tachycineta thalassina*	Cavities or occasionally on cliffs or banks in deciduous, coniferous, and mixed woodlands.	9–17 feet	April through August; single brood.	Clutch is incubated for 13–15 days; altricial young fledge at 16–24 days.	50	30–50	15–30
Northern Rough-winged Swallow	*Stelgidopteryx serripennis*	Cavities on a steep slope or use crevices and holes in bridges and buildings.	Ground/cliff	April through June; single brood.	Clutch incubated for 15–16 days by female; altricial young fledge at 18–21 days.	75	30–75	15–30
Bank Swallow	*Riparia riparia*	Cavities in sandy banks or cliffs along rivers.	Ground/cliff	May through July; single brood.	Clutch incubated for 12–16 days by both sexes; altricial young fledge at 18–24 days.	100	CR	CR

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Barn Swallow	*Hirundo rustica*	Cup nests often on buildings and bridges in open habitats near water.	6–40 feet	April through July; double brood.	Clutch incubated for 14–16 days by both sexes; altricial young fledge at 17–24 days.	50	30–50	15–30
Cliff Swallow	*Petrochelidon pyrrhonota*	Closed mud nests often on cliff faces, buildings, or bridges in open habitats near water.	5 feet and higher	April through June; double brood.	Clutch incubated for 12–14 days by both sexes; altricial young fledge at approximately 23 days.	50	30–50	15–30
Mountain Chickadee	*Poecile gambeli*	Cavities in trees in coniferous mountain forests.	16–50 feet	April through August; single or double brood.	Clutch is incubated for 14 days; altricial young fledge at 20 days.	50	15–50	10–15
Chestnut-backed Chickadee	*Poecile rufescens*	Cavities trees in coniferous forests and deciduous woodlands.	0–80 feet	March through July; single or (rarely) double brood.	Clutch is incubated for 12–14 days by female; altricial young fledge at 18–21 days.	50	15–50	10–15
Oak Titmouse	*Baeolophus inornatus*	Cavities in trees in oak woodlands.	2–40 feet	March through June; single brood.	Clutch incubated for 14–16 days by female; altricial young fledge at 17 days.	50	15–50	10–15
Bushtit	*Psaltriparus minimus*	Pendulous nests in trees and shrubs in a variety of habitats.	3–98 feet	February through June; double brood.	Clutch incubated for 12–13 days by both sexes; altricial young fledge at 14–15 days.	50	30–50	15–30
Red-breasted Nuthatch	*Sitta canadensis*	Cavities in trees in coniferous forests and mixed woodlands.	5–40 feet	April through July; single or (rarely) double brood.	Clutch incubated for approximately 12 days by female while male provisions her; altricial young fledge at 18–21 days.	75	30–75	15–30
White-breasted Nuthatch	*Sitta carolinensis*	Cavities in trees in deciduous woodlands and mixed coniferous forests.	1–50 feet	March through June; single brood.	Clutch incubated for 12–14 days by female while male provisions her; altricial young fledge at 14–16 days.	50	15–50	10–15

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Pygmy Nuthatch	*Sitta pygmaea*	Cavities in dead trees or dead portions of trees in long-needled pine forests.	20–70 feet	May through July; single or double brood.	Clutch incubated for 15–16 days by female while male provisions her; altricial young fledge at 20–21 days.	75	30–75	15–30
Brown Creeper	*Certhia americana*	Cup nests concealed behind loose bark, in crevices on a trees in coniferous forests and mixed coniferous forests..	5–15 feet	May through July; single brood.	Clutch incubated for 15–18 days by female while male provisions her; altricial young fledge at 21 days.	75	30–75	15–30
Rock Wren	*Salpinctes obsoletus*	Cavities on rocky slopes	Ground/cliff	March through June; double or triple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 14–16 days.	75	30–75	15–30
Canyon Wren	*Catherpes mexicanus*	Cup nests in rock crevices or ledges in rocy habitats.	Ground/cliff	March through July; double brood.	Clutch incubated for 12–18 days by female; altricial young fledge at approximately 15 days.	75	30–75	15–30
Bewick's Wren	*Thryomanes bewickii*	Cavities in trees, brush, or between rocks in open woodlands and shrubby areas.	0–20 feet	March through July; double or triple brood.	Clutch incubated for approximately 14 days by female while male provisions her; altricial young fledge at approximately 14 days.	75	30–75	15–30
House Wren	*Troglodytes aedon*	Cavities in shrubby cover and thickets in open woodlands and hedgerows.	0–20 feet	April through July; double brood.	Clutch incubated for 13–15 days by female; altricial young fledge at 12–18 days.	50	30–50	15–30
Pacific Wren	*Troglodytes pacificus*	Cavities or crevices in logs, stumps, root balls, or trees in variety of forests.	0–10 feet	March through August; single or double brood.	Clutch is incubated for 14–17 days by female; altricial young fledge at approximately 19 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Marsh Wren	*Cistothorus palustris*	Domed nests over the water in tall rushes and marsh grasses in wetland habitats.	1–5 feet	March through July; double or triple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 13–15 days.	75	30–75	15–30
American Dipper	*Cinclus mexicanus*	Domed nests in crevices in rocks, logs, bridges, or other protected areas immediately adjacent to water.	0–30 feet	March through August; single or double brood.	Clutch is incubated for approximately 16 days by female; altricial young fledge at 18–25 days.	75	30–75	15–30
Golden-crowned Kinglet	*Regulus satrapa*	Hanging nests woven onto conifer twigs in coniferous forests and mixed woodlands.	6–50 feet	May through August; single or double brood.	Clutch is incubated for 14–15 days by female; altricial young fledge at 16–19 days.	75	30–75	15–30
Ruby-crowned Kinglet	*Regulus calendula*	Cup nests in trees in coniferous woodlands.	4–100 feet	May through July; single brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 16 days.	75	30–75	15–30
Blue-gray Gnatcatcher	*Polioptila caerulea*	Cup nests in trees or shrubs in a variety of habitats from shrublands to mature forests.	3–80 feet	April through July; double brood.	Clutch incubated for approximately 15 days by both sexes; altricial young fledge at 12–13 days.	75	30–75	15–30
Coastal California Gnatcatcher	*Polioptila californica californica*	Cup nests in coastal sage scrub and chaparral.	2–3 feet	February through August; double brood.	Clutch incubated for approximately 14 days by both sexes; altricial young fledge at 15–16 days.	500	CR	CR
Wrentit	*Chamaea fasciata*	Cup nests in coastal sage scrub and chaparral.	1–4 feet	March through July; double brood.	Clutch incubated for 15–16 days by both sexes; altricial young fledge at 15–16 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Northern Mockingbird	*Mimus polyglottos*	Cup nests in shrubs and trees in variety of habitats, including woodlands and in developed areas.	3–10 feet	March through July; double or triple brood.	Clutch incubated for 11–14 days by female; altricial young fledge at 12–14 days.	75	30–75	15–30
Sage Thrasher	*Oreoscoptes montanus*	Cup nests in low shrubs in sagebrush habitat.	2–3 feet	April through August; single or double brood.	Clutch is incubated for 13–17 days; altricial young fledge at approximately 11 days.	75	30–75	15–30
Le Conte's Thrasher	*Toxostoma lecontei*	Cup nests in cholla or a low tree, in desert areas with shrubby growth.	2–8 feet	February through June; double or triple brood.	Clutch incubated for 14–20 days by both sexes; altricial young fledge at 14–17 days.	75	30–75	15–30
California Thrasher	*Toxostoma redivivum*	Cup nests in low trees or shrubs in sage scrub and chaparral.	2–4 feet	February through July; double brood.	Clutch incubated for approximately 14 days by both sexes; altricial young fledge at 12–14 days.	75	30–75	15–30
Bendire's Thrasher	*Toxostoma bendirei*	Cup nests in shrubs, cacti, or trees.	2–5 feet	Late February through April; single, double, or triple brood.	Clutch incubated 12–14 days by both parents; altricial young fledge at 12–13 days.	75	30–75	15–30
Cedar Waxwing	*Bombycilla cedrorum*	Cup nests in forks of trees in riparian or redwood forests.	5–50 feet	June through August; single or double brood.	Clutch is incubated for 12–14 days; altricial young fledge at 16–18 days	75	30–75	15–30
Phainopepla	*Phainopepla nitens*	Cup nests in trees in desert scrub and coastal chaparral.	6–11 feet	Late February—desert; April through June—coastal; double brood.	Clutch incubated for 14–15 days by both sexes; altricial young fledge at 18–19 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Orange-crowned Warbler	*Oreothlypis celata*	Cup nests on the ground or in crevices near ground in a variety of habitats, often where woodland and chaparral habitats meet.	Ground	April through July; single or double brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 12–13 days.	75	30–75	15–30
Nashville Warbler	*Oreothlypis ruficapilla*	Cup nests on ground concealed in bushes or small trees in woodland edges or shrubby areas.	Ground	May through July; single brood.	Clutch incubated for 11–12 days by female; altricial young fledge at 11 days.	75	30–75	15–30
Yellow Warbler	*Setophaga petechia*	Cup nests in trees or shrubs in shrubby growth in riparian areas.	2–12 feet	April through July; single brood.	Clutch incubated for 11–12 days by female; altricial young fledge at days.	75	30–75	15–30
Yellow-rumped Warbler	*Setophaga coronata*	Cup nests in trees in coniferous woodlands.	4–50 feet	April through July; single or (rarely) double brood.	Clutch incubated for 12–13 days by female; altricial young fledge at 12–14 days.	75	30–75	15–30
Black-throated Gray Warbler	*Setophaga nigrescens*	Cup nests in trees or shrubs in open woodlands in mountainous areas.	8–35 feet	May through July; single or double brood.	Clutch incubated by female; young are altricial. Length of incubation period and age at fledging undocumented.	75	30–75	15–30
Hermit Warbler	*Setophaga occidentalis*	Cup nests high in trees in coniferous forests	20–40 feet	May through July; single brood.	Clutch incubated for approximately 12 days by both sexes; altricial young fledge at 8–10 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
MacGillivray's Warbler	*Geothlypis tolmiei*	Cup nests in low thick shrub in riparian woodlands and coniferous or mixed forests.	1–5 feet	May through July; single brood.	Clutch incubated for 11–13 days by female; altricial young fledge at 8–10 days.	75	30–75	15–30
Common Yellowthroat	*Geothlypis trichas*	Cup nests in reeds and other wetland vegetation over water or near water.	1–3 feet	April through July; single brood.	Clutch incubated for approximately 12 days by female; altricial young fledge at 9–10 days.	75	30–75	15–30
Wilson's Warbler	*Cardellina pusilla*	Cup nests on ground, hidden by vegetation in shrub habitats in forests and chaparral.	Ground	April through June; single or (rarely) double brood.	Clutch incubated for 11–13 days by female; altricial young fledge at 10–11 days.	75	30–75	15–30
Yellow-breasted Chat	*Icteria virens*	Cup nests in a dense shrub or tangle in thick riparian vegetation.	1–8 feet	April through July; single or (rarely) brood.	Clutch incubated for 11–12 days by female; altricial young fledge at 8–11 days.	75	30–75	15–30
Western Tanager	*Piranga ludoviciana*	Cup nests high in trees on outer branches in coniferous and mixed hardwood forests.	8–75 feet	May through July; single brood.	Clutch incubated for approximately 13 days by female; altricial young fledge at 10–11 days.	75	30–75	15–30
Green-tailed Towhee	*Pipilo chlorulus*	Cup nests in or at base of low shrubs in chaparral and disturbed (low growth) forest habitats.	0–2 feet	April through August; single or double brood.	Clutch incubated for 11–13 days by female; altricial young fledge at 11–14 days.	75	30–75	15–30
Spotted Towhee	*Pipilo maculatus*	Cup nests usually on the ground or very low in bushes shrubby habitats.	2–12 feet	April through July; single or double brood.	Clutch incubated for 12–13 days by female; altricial young fledge at approximately 9 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
California Towhee	*Melozone crissalis*	Cup nests in shrubs or small trees in brushy habitats.	4–12 feet	March through July; double or triple brood.	Clutch incubated for approximately 14 days by female; altricial young fledge at approximately 10 days.	75	30–75	15–30
Rufous-crowned Sparrow	*Aimophila ruficeps*	Cup nests at the base of a grass clumps, in dry rocky areas with sparse undergrowth.	0–2 feet	April through June; single or double brood.	Clutch incubated for 11–13 days by female; altricial young fledge at 9 days.	75	30–75	15–30
Chipping Sparrow	*Spizella passerina*	Cup nests in trees or shrubs in open woodlands.	3–20 feet	April through July; double brood.	Clutch incubated for 11–14 days by female; altricial young fledge at 9–12 days.	75	30–75	15–30
Black-chinned Sparrow	*Spizella atrogularis*	Cup nests in shrubs in chaparral habitat.	1–3 feet	April through August; single brood.	Clutch incubated for 12–13 days by female; altricial young fledge at approximately 10 days.	75	30–75	15–30
Lark Sparrow	*Chondestes grammacus*	Cup nests usually in scrapes on ground in open grasslands, or cup nests in herbaceous or woody shrubs.	0–9 feet	April through July; double brood.	Clutch incubated for 11–13 days by female; altricial young fledge at 9–10 days.	75	30–75	15–30
Black-throated Sparrow	*Amphispiza bilineata*	Cup nests in thorny shrubs or cactus in chaparral or desert habitats.	1 foot	April through June; single or double brood.	Clutch incubated for 12–13 days by female; altricial young fledge at approximately 9.5 days.	75	30–75	15–30
Sage Sparrow	*Artemisiospiza belli*	Cup nests in thick bushes in chaparral and desert habitats.	1 foot	March through June; double brood.	Clutch incubated for 10–16 days by female; altricial young fledge at 9–10 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Bryant's Savannah Sparrow	*Passerculus sandwichensis alaudinus*	Cup nests on ground in dense, moist grasslands, ruderal vegetation, or saltmarsh vegetation.	Ground	April through July; single or double brood.	Clutch incubated for 10–13 days; altricial young fledge at 7–14 days.	75	30–75	15–30
Belding's Savannah Sparrow	*Passerculus sandwichensis beldingi*	Cup nests on ground in dense, moist grasslands, ruderal vegetation, or saltmarsh vegetation.	Ground	April through July; single or double brood.	Clutch incubated for 10–13 days; altricial young fledge at 7–14 days.	75	CR	CR
Grasshopper Sparrow	*Ammodramus savannarum*	Ground nest at the base of bunchgrass or other vegetation in grasslands.	Ground	April through July; double or triple brood.	Clutch incubated for 11–12 days by female; altricial young fledge after 9 days.	75	30–75	15–30
Song Sparrow	*Melospiza melodia*	Cup nests in low grass and shrubs or thickets in a variety of forest, shrub, grassland, marsh, and riparian habitats.	1–3 feet	March through July; double, triple, or quadruple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 10 days.	75	30–75	15–30
Suisun Song Sparrow	*Melospiza melodia maxillaris*	Cup nests in low grass and shrubs or thickets in a variety of forest, shrub, grassland, marsh, and riparian habitats.	1–3 feet	March through July; double, triple, or quadruple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 10 days.	75	30–75	15–30
Alameda Song Sparrow	*Melospiza melodia pusillula*	Cup nests in low grass and shrubs or thickets in a variety of forest, shrub, grassland, marsh, and riparian habitats.	1–3 feet	March through July; double, triple, or quadruple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 10 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
San Pablo Song Sparrow	*Melospiza melodia samuelis*	Cup nests in low grass and shrubs or thickets in a variety of forest, shrub, grassland, marsh, and riparian habitats.	1–3 feet	March through July; double, triple, or quadruple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 10 days.	75	30–75	15–30
Lincoln's Sparrow	*Melospiza lincolnii*	Cup nests in depressions on the ground in shrubby growth at forest edges, clearings; often near wet areas	Ground	May through July; double brood.	Clutch incubated for 13–14 days by female; altricial young fledge at 10–12 days.	75	30–75	15–30
White-crowned Sparrow	*Zonotrichia leucophrys*	Cup nests on ground or in shrubs or small trees in coastal or mountain chaparral and mountain forests.	0–5 feet	May through September; double or triple brood.	Clutch incubated for 9–15 days; altricial young fledge at 9–11 days	50	30–50	15–30
Dark-eyed Junco	*Junco hyemalis*	Cup nests in depressions on the ground among tree roots or brush in variety of woodland habitats; also on building ledges or in trees.	Ground, but up to 8 feet on ledges or trees	April through July; double or triple brood.	Clutch incubated for 12–13 days by female; altricial young fledge at 10–13 days.	50	30–50	15–30
Black-headed Grosbeak	*Pheucticus melanocephalus*	Cup nests in trees or shrubs in thickets, under trees along streams in riparian woodlands or coniferous or mixed forests near edges.	6–12 feet	April through July; single brood.	Clutch incubated for 12–13 days by both sexes; altricial young fledge at 12 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Blue Grosbeak	*Guiraca caerulea*	Cup nests small trees, shrubs, or other low vegetation, usually near open areas in desert, chaparral, savannah, and forest edge habitats.	<1–16 feet	April through August; single or double brood.	Clutch incubated for 11–12 days by female; altricial young fledge at 9–13 days.	75	30–75	15–30
Lazuli Bunting	*Passerina amoena*	Cup nests in low thick shrubby riparian or chaparral habitat.	1–10 feet	May through July; double brood.	Clutch incubated for approximately 12 days by female; altricial young fledge at 10–15 days.	75	30–75	15–30
Red-winged Blackbird	*Agelaius phoeniceus*	Cup nests in cattails, bulrushes, and other marsh vegetation or in shrubs in grasslands and shrubby habitats.	1–13 feet	March through June; double brood.	Clutch incubated for 10–12 days by female; altricial young fledge at 10–11 days.	75 350 (Kern Red-winged Blackbird)	30–75 200–350 (Kern Red-winged Blackbird)	15–30 100–200 (Kern Red-winged Blackbird)
Tricolored Blackbird	*Agelaius tricolor*	Cup nests in cattails and bulrushes in marshes and shrubby areas in uplands and agricultural areas. Colonial nester.	1–5 feet	April through June; double brood.	Clutch incubated for approximately 11 days by female; altricial young fledge at 13 days.	350	CR	CR
Yellow-headed Blackbird	*Xanthocephalus xanthocephalus*	Cup nests cattails or other emergent vegetation over water in marshes with thick vegetative growth. Colonial nester.	2–3 feet	May through June; single brood.	Clutch incubated for 10–13 days by female; altricial young fledge at 9–12 days old	350	200–350	100–200
Brewer's Blackbird	*Euphagus cyanocephalus*	Cup nests high in trees or shrubs near water in agricultural or suburban/urban areas.	8–43 feet	March through July; single or double brood.	Clutch incubated for 12–13 days by female; altricial young fledge at approximately 13 days.	50	30–50	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Western Meadowlark	*Sturnella neglecta*	Domed nests on ground in open grasslands.	Ground	March through June; double brood.	Clutch incubated for 13–15 days by female; altricial young fledge at 10–12 days.	75	30–75	15–30
Hooded Oriole	*Icterus cucullatus*	Closed cup nests high in trees (often palm treets) or shrubs, often in riparian habitat and in suburban areas.	10–45 feet	April through August; double or triple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at approximately 14 days.	75	30–75	15–30
Bullock's Oriole	*Icterus bullockii*	Pensile cup nests in twig fork of trees in riparian and oak woodlands.	6–15 feet	April through July; single brood.	Clutch incubated for approximately 14 days by female; altricial young fledge at approximately 14 days.	75	30–75	15–30
Pine Grosbeak	*Pinicola enucleator*	Cup nests near the end of horizontal tree branches in coniferous forests.	16–35 feet	May through August; single brood.	Clutch incubated for 13–14 days by female; altricial young fledge at approximately 14 days.	75	30–75	15–30
Purple Finch	*Haemorhous purpureus*	Cup nests high in trees well hidden by foliage, in coniferous forests and woodlands.	5–60 feet	April through June; double brood.	Clutch incubated for approximately 13 days by female; altricial young fledge at approximately 14 days.	75	30–75	15–30
House Finch	*Haemorhous mexicanus*	Cup nests in trees, building ledges, and other locations in urban/suburban, agriculture, woodlands, desert, and chaparral habitats.	5–7 feet	March through July; double or triple brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 14–16 days.	50	15–30	10–15
Red Crossbill	*Loxia curvirostra*	Loose cup constructed near the end of horizontal branch in coniferous forests.	6–60 feet	February through June; single brood.	Clutch incubated for 12–16 days by female; altricial young fledge at 17–22 days.	75	30–75	15–30

Common Name	Scientific Name	Nest Location, Substrate, and Habitat	Vertical Height	Peak Breeding Season/Number of Broods per Season	Incubation Duration/Chick-rearing Duration	Standard Buffer* (feet)	Medium to High Disturbance Category Buffer (feet)	Low to Medium Disturbance Category Buffer (feet)
Pine Siskin	*Spinus pinus*	Cup nest constructed on conifer or hardwood in coniferous or mixed hardwood forests.	3–50 feet	April through July; single or double brood.	Clutch incubated for approximately 13 days; altricial young fledge at 14–15 days.	75	30–75	15–30
Lesser Goldfinch	*Spinus psaltria*	Cup nests in trees and shrubs in a variety of open habitats including oak woodlands, mixed coniferous forests, riparian woodlands, chaparral, agricultural and suburban habitats.	3–36 feet	April through July; single or double brood.	Clutch incubated for approximately 12 days by female; altricial young fledge at 11 days.	75	30–75	15–30
Lawrence's Goldfinch	*Spinus lawrencei*	Cup nests in scattered trees in oak woodlands and savannahs.	3–40 feet	April through July; single or (rarely) double brood	Clutch incubated for 12–13 days by female; altricial young fledge at approximately 11 days.	75	30–75	15–30
American Goldfinch	*Spinus tristis*	Cup nests in a variety of shrubs in variety of open habitats including ruderal fields and grasslands with shrub component nearby.	3–10 feet	April through August; single or double brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 11–17 days.	75	30–75	15–30
Evening Grosbeak	*Coccothraustes vespertinus*	Cup nests in fir or other conifers in coniferous forests.	30–60 feet	June through August; single or (rarely) double brood.	Clutch incubated for 12–14 days by female; altricial young fledge at 13–14 days.	75	30–75	15–30

[a] Consultation recommended to perform work within the standard buffer. Confer internally on avoidance and minimization approach.

[b] The 1,320-foot (0.25-mile) buffer applies to the highest noise level category (90 dB or greater measured at 50 feet). Smaller buffers may be appropriate based on the noise levels of the project. Biologists should follow the methodology found in *Estimating the Effects of Auditory and Visual Disturbance to Northern Spotted Owls and Marbled Murrelets in Northwestern California* (U.S. Fish and Wildlife Service 2006) to determine the noise level and appropriate buffer for their specific project.

Distribution Need Analysis

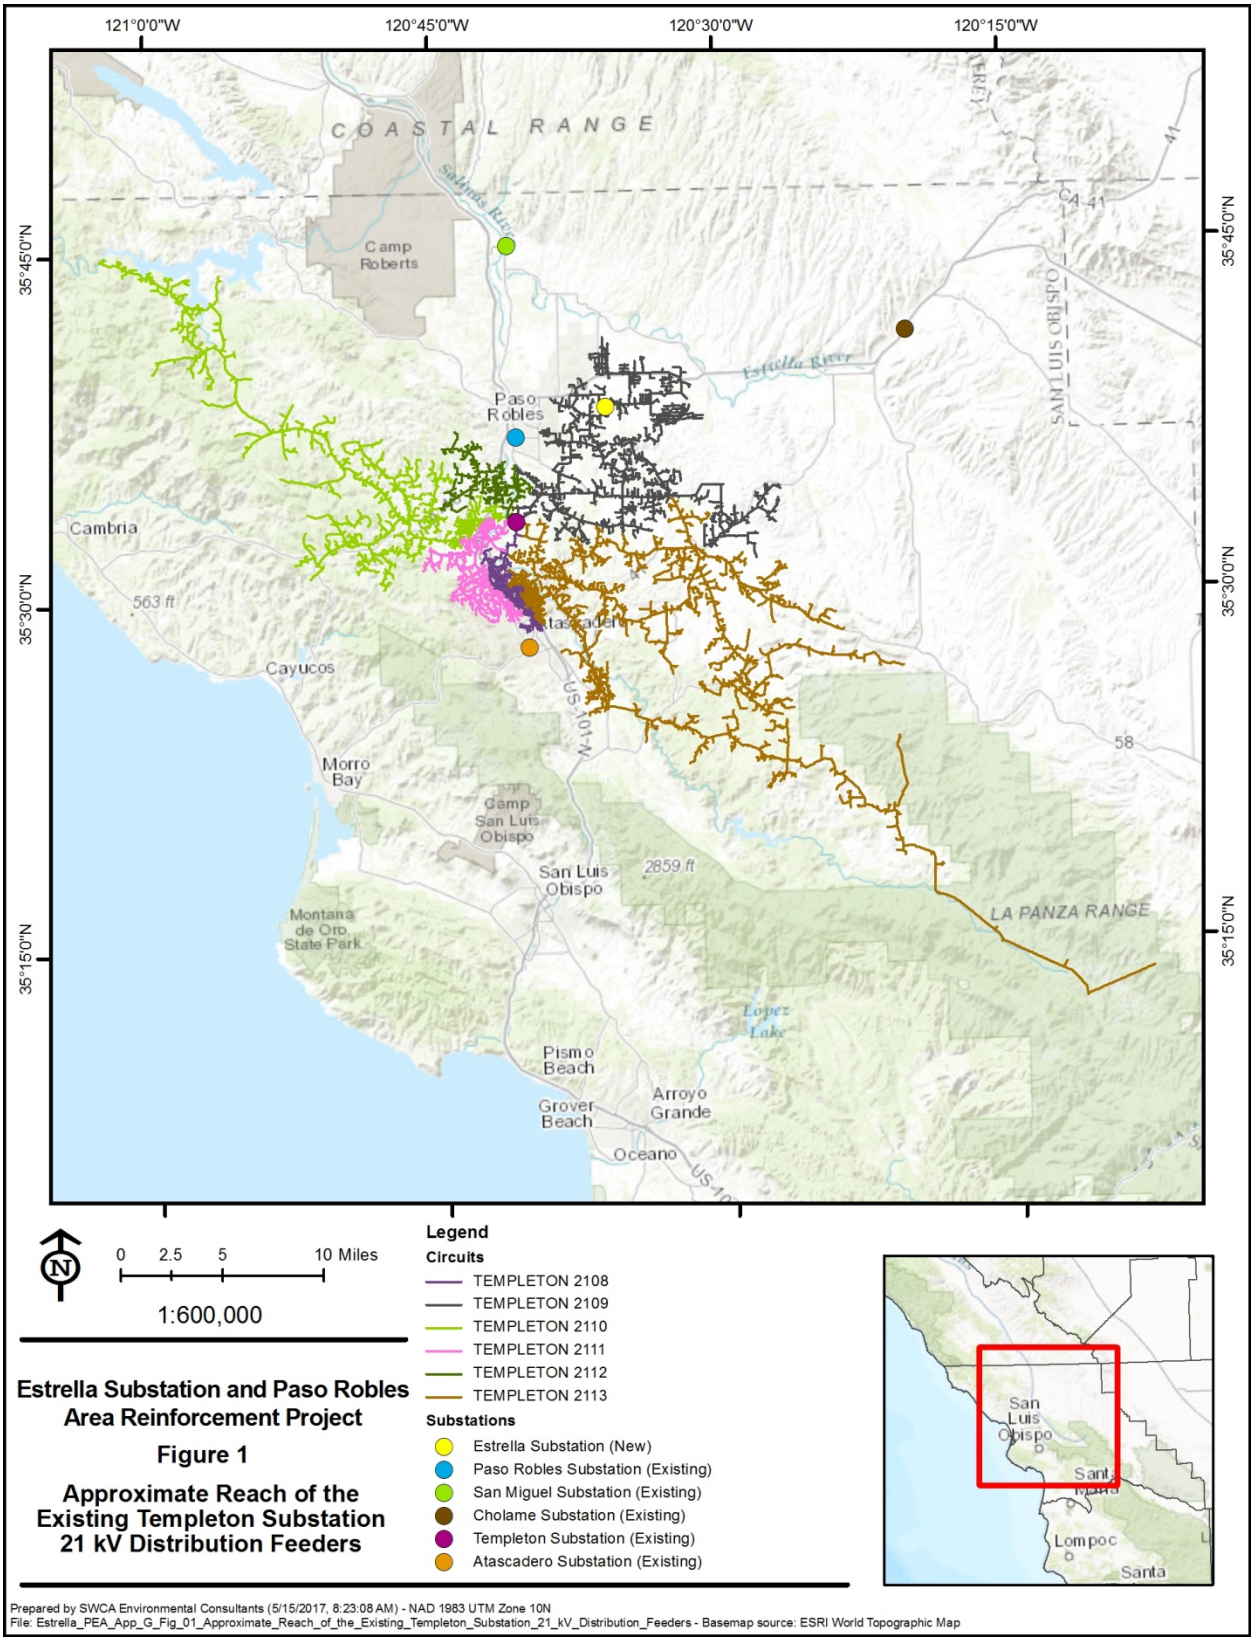
This page intentionally left blank.

DISTRIBUTION SUBSTATION NEED ANALYSIS – PASO ROBLES DPA

I. LIMITATIONS IN THE EXISTING DISTRIBUTION SYSTEM

A. Reliability

The Paso Robles Distribution Planning Area (DPA) encompasses the communities of San Miguel, Paso Robles, Templeton, Creston, Atascadero, and Santa Margarita. Pacific Gas and Electric Company (PG&E) serves approximately 47,000 households and businesses (also referred to as customer connections[1]) within this DPA at 12 kilovolt (kV) and 21 kV primary voltage through four substations: San Miguel (70/12 kV), Paso Robles (70/12 kV), Templeton (230/21 kV), and Atascadero (70/12 kV). Bordering the Paso Robles DPA to the east is the Cholame DPA, which includes the communities of Shandon and Parkfield, and serves approximately 1,500 customer connections at 12 kV and 21 kV through one substation: Cholame Substation (70/12 and 70/21 kV). The two DPAs are connected by one long 12 kV circuit tie between a San Miguel Substation feeder and a Cholame Substation feeder.



Reliable distribution systems consist of substations located at regular intervals and sized correctly in terms of capacity and number of feeders to cover the area between substations without overextending some substations and underutilizing others. The Paso Robles DPA is not currently in line with these system goals.

Templeton Substation has lengthy 21 kV distribution lines (feeders) that can carry roughly 73% more load and experience one-third less voltage drop than the 12 kV feeders from the other area substations. Even though Templeton Substation is south of the city of Paso Robles and Paso Robles Substation, its 21 kV feeders extend several miles east and north of Paso Robles Substation, serving much of east Paso Robles as well as areas south and west of Paso Robles. (*See* Figure 1, Approximate Reach of the Existing Templeton Substation 21 kV Distribution Feeders.)

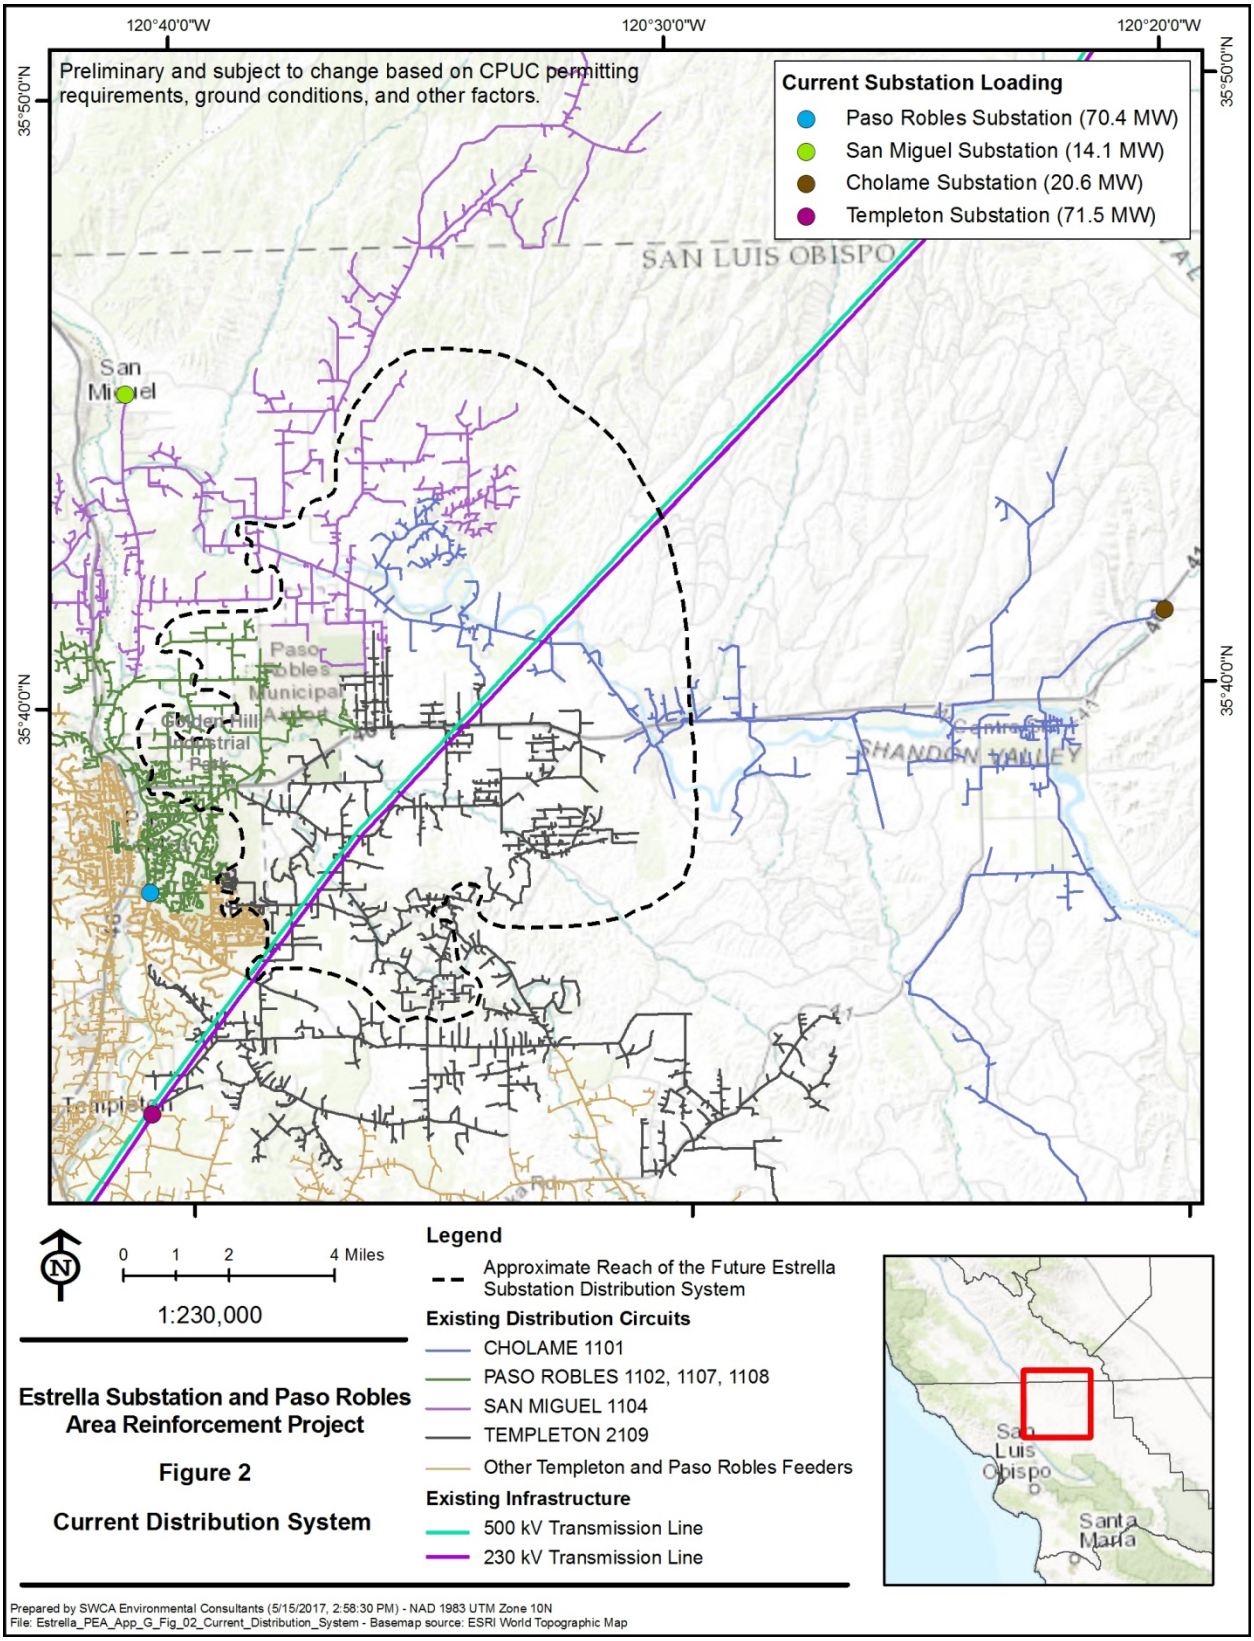
Because 21 kV feeders are no more reliable than 12 kV feeders in terms of distance and area served, service reliability on a line is sacrificed by extending the reach of a 21 kV feeder to take advantage of its superior voltage performance, or adding more customers or load to take advantage of its superior capacity. Tripling the length of a feeder increases exposure to outages by 300%. Adding 73% more customers increases the number of customers experiencing an outage by 73%.

[1] Each customer connection connects to a home or business, representing many more customers than indicated by the number of connections.

Figure 1. Approximate Reach of the Existing Templeton Substation 21 kV Distribution Feeders

For these reasons, the long feeders from Templeton have resulted in poor service reliability. For example, the Templeton 2109 main line serving much of east Paso Robles, both north and south of California State Route (SR-) 46, has experienced five sustained outages and nine momentary outages over the past 5 years. These outages affected an average of just under 3,000 customer connections per event, with over 4,300 households and businesses affected in the largest event. Table 1, Five-Year Outage History (Feb. 2012 to Feb. 2017) of Templeton 21 kV Feeders, presents a 5-year outage history of main-line outages to the Templeton 21 kV feeders in Paso Robles, Atascadero, and Santa Margarita. All of the outages were a significant distance from Templeton Substation. The number of outages is relatively high for typical distribution main lines, but not unexpected in these areas due to the long express nature of the 21 kV feeders. Table 1 captures most of the sustained outages experienced by all customers in these areas; however, many customers experienced significantly more sustained outages due to more-localized outages on smaller lines extending from the main lines.

Table 1. Five-Year Outage History (Feb. 2012 to Feb. 2017) of Templeton 21 kV Feeders



Feeder Name	Area Served Where Outages Occurred	No. of Sustained Outages	No. of Momentary Outages	Average No. of Customer Connections Affected Per Event	Highest No. of Customer Connections Affected by an Event
Templeton 2108	Northern Atascadero	7	10	2,955	3,189
Templeton 2109	Northeast Paso Robles	5	9	2,957	4,325
Templeton 2110	Rural West Paso Robles	4	20	1,802	2,926
Templeton 2111	Western Atascadero	6	10	1,847	2,433
Templeton 2112	Southern Paso Robles	3	10	475	1,068
Templeton 2113	Santa Margarita	7	25	1,911	5,446

B. Capacity

Ideally, the distribution feeder ties between distribution substations within a DPA can be used to transfer load between substations as well as restore service from one feeder to another in the event of outages on the distribution system. Because of this arrangement, forecasted overloads at one substation can be eliminated by transferring load to an adjacent substation. This process can continue until all possible load transfers are performed to allocate load to each transformer bank according to its capacity, and all substations within the DPA reach their maximum buildout (i.e., contain the maximum number and size of transformer banks and/or feeders). There is a practical limit in the ability to divide DPA load among all of the banks in exact proportion to their capabilities. Operating experience indicates that overloads become unavoidable when DPA load reaches approximately 95% of the total aggregate capacity of all of the substation banks. For this reason, PG&E normally defines available DPA capacity at 95% utilization, or 95% of its aggregate bank capacity.

In 2010, Paso Robles Substation reached its ultimate build out of three 70/12 kV, 30 megavolt-ampere (MVA) transformers. Templeton Substation currently consists of two 230/21 kV, 45 MVA transformers with lengthy distribution feeders that serve north and east beyond Paso Robles Substation. Atascadero and San Miguel substations are single-transformer facilities (30 and 16 MVA, respectively) with limited space for expansion or 70 kV transmission constraints. (*See* Figure 2, Current Distribution System.) The available capacity within the Paso Robles DPA is 212.55 megawatts (MW) based upon 95% utilization.

Figure 2. Current Distribution System

II. SITING OF NEW DISTRIBUTION SUBSTATION

A. Siting Principles

PG&E's distribution planning practices emphasize that the siting of a new substation or the addition of capacity at an existing substation should be done in a way that improves service reliability for the area, with the aim of locating substations at regular intervals and sizing them correctly to cover the area between substations without overextending some substations and underutilizing others. Thus, from an engineering perspective, the most important factors in distribution substation siting include:

(1) Proximity of existing and forecasted electric load

(2) Existing and future substation radius in miles from the substation for distribution facilities sphere of influence:

- 21 kV – Rural = 11 miles; Urban = 4 miles

12 kV – Rural = 7 miles; Urban = 3.5 miles

(3) Proximity to existing transmission and distribution systems

(4) Length and location of new transmission and distribution lines

B. Location of Expected Load Growth

City of Paso Robles planners are expecting strong industrial growth in the Paso Robles city limits north of SR-46 within the next 10 years and a resurgence of residential growth south of SR-46. City planners are estimating a 50% increase in the population of Paso Robles by 2045.

According to the City of Paso Robles (City) Public Works Director, most of the industrial growth is expected to occur within the Golden Hill Industrial Park and directly south of Paso Robles Airport along Dry Creek Road, including the Aerotech Industrial Park now occupied by Advance Adapters, a maker of specialty parts for four-wheel drive vehicles. At this time, industrial growth is anticipated to be led by wine production. For example, within Golden Hill Industrial Park, San Antonio Winery, a large 1 MW facility, is now nearing completion. Justin Vineyards, owned by Wonderful Company (Pom Wonderful), operates a large new facility and is planning to expand as soon as the industrial park itself expands eastward toward Airport Road.

To the south of SR-46, approximately 2 miles east of Paso Robles Substation and 2.7 miles west of the Estrella Substation site, development of the 827-acre Chandler Ranch property is expected to begin soon. The City has approved development of the first 154 acres of the ranch, and construction on the first 350 residences could start within 2 years.

Throughout Paso Robles, several new hotels or hotel expansions have received approval, with several now under construction. These include the new Oxford Suites Hotel, Pine Street Promenade Hotel, Hilton Garden Inn, Marriot Residence Inn, and La Entrada Discovery Gardens and Resort, and expansions of the existing Oaks Hotel and Oak Tree Inn.

C. Why Locate the New Substation within 2.2 Miles of the SR-46 230 kV Line Intersection?

The California Independent System Operator Corporation (CAISO) conducts a Transmission Planning Process each year, which builds upon the previous year's plan and studies the reliability of the electric system over a 10-year window. CAISO approved the development of a new 230/70 kV substation—

Estrella Substation—and a new 70 kV power line to interconnect to the substation to improve reliability in San Luis Obispo County in its *2013–2014 Transmission Plan, Estrella Substation Project Description and Functional Specifications for Competitive Solicitation* (CAISO 2014). The project also included a distribution component. Through a competitive solicitation process, CAISO awarded the transmission-level substation project to NextEra Energy Transmission West LLC (NEET West) in its *Estrella Substation Project, Project Sponsor Selection Report* (CAISO 2015).

During this process, CAISO identified the location for the new substation as being within a 2.2-mile radius from the intersection of SR-46 and the Morro Bay-Gates/Templeton-Gates 230 kV transmission corridor, about 5 miles east of Paso Robles Substation. (*See* Figure 3, 2.2-mile Substation Location Area.) This location was a result of a recommendation from PG&E's distribution planning engineers, based upon the siting principles described in Section II.A and the following considerations:

1. The anticipated growth areas are north and east of Paso Robles Substation, so the new distribution substation should be north and east of Paso Robles Substation in order to place the new distribution substation near the growth.

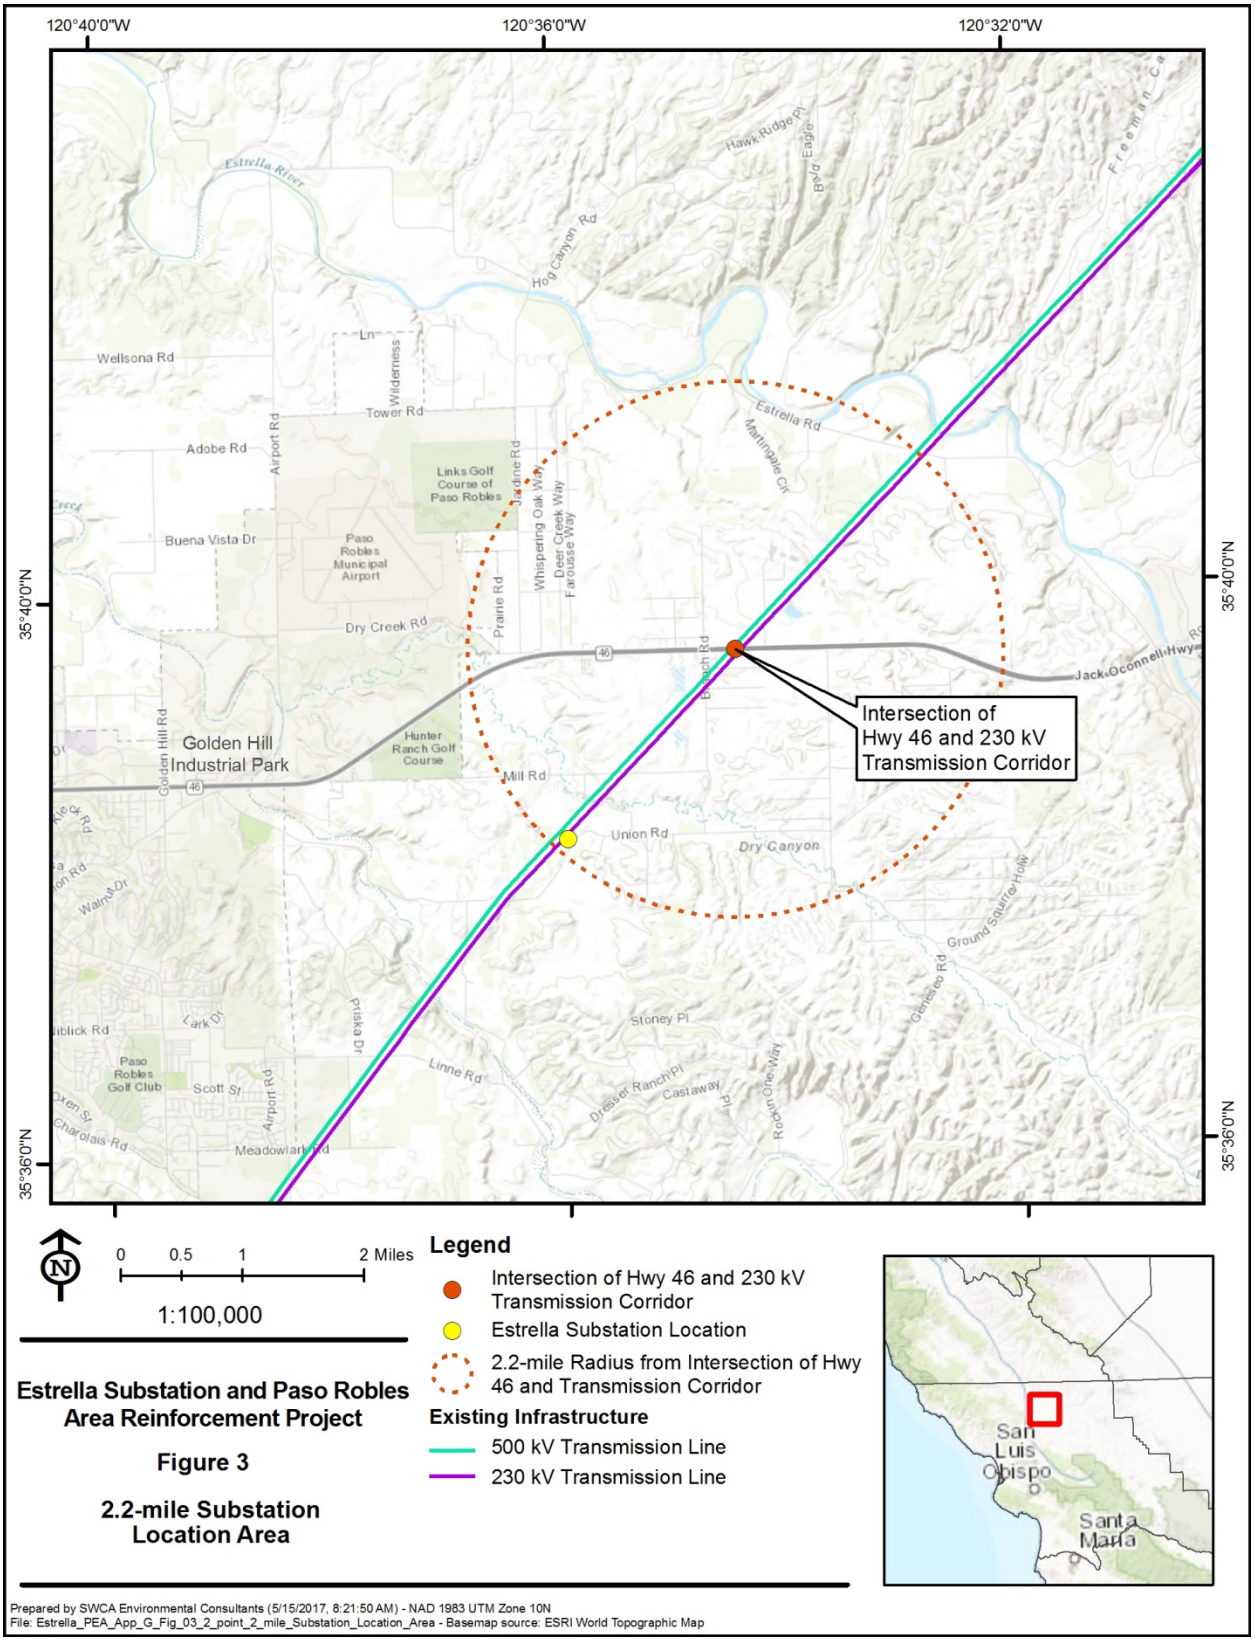
2. Since the new distribution substation would be fed from the 230 kV transmission source, the new substation should be located along the Morro-Bay Gates 230 kV Transmission Lines to minimize costs and potential project impacts.

3. The locality known as "Estrella" offered the operational advantage of being located where long distribution lines from four existing substations ended. These substations are San Miguel, Paso Robles, Cholame, and Templeton. (*See* Figure 2, Current Distribution System.) Placing the substation in Estrella would make it possible to back feed and split in half long existing distribution lines from these four sources. (*See* Figure 4, Future Estrella Substation Distribution System.) Of the potential sites in Estrella, sites north of Estrella Road would place the new substation off in a northeast corner of the DPA, too far from the growth areas near Paso Robles Airport and Golden Hill Industrial Park, just south of the airport. For this reason, the northern-most site considered was a site where the 230 kV lines cross Estrella Road, approximately 2.2 miles northeast of SR-46 along the 230 kV right-of-way.

4. The southern-most site that distribution planning engineers felt was acceptable (not too close to Templeton or Paso Robles substations and not too far from the growth areas) was a site where Union Road comes close to the Morro Bay-Gates 230 kV Transmission Lines. This southern-most site, which NEET West ultimately selected, is within 2.2 miles south of the SR-46 and 230 kV line intersection.

In summary, from a distribution perspective, the Estrella Substation site location is near the Dry Creek Road area south of Paso Robles Airport and Golden Hill Industrial Park in northern Paso Robles, where large-demand businesses are expected to be constructed. It is also at a location very well-suited for connecting to existing feeders. Adding distribution capacity at or near the Estrella Substation site will improve service reliability by allowing feeders from Templeton, Paso Robles, San Miguel, and Cholame substations to be significantly reduced in their reach and therefore significantly reduced in their exposure to outages. The new, high-growth areas can be served directly from the new distribution substation. The Estrella Substation site is far closer to the anticipated growth areas than Paso Robles Substation, and has largely-established feeder routes already in place. (*See* Figure 4, Future Estrella Substation Distribution System.) Templeton Substation is several miles farther south from Paso Robles Substation and far from the expected load growth. Neither Paso Robles nor Templeton substations would provide favorable locations for additional distribution capacity.

Figure 3. 2.2-Mile Substation Location Area



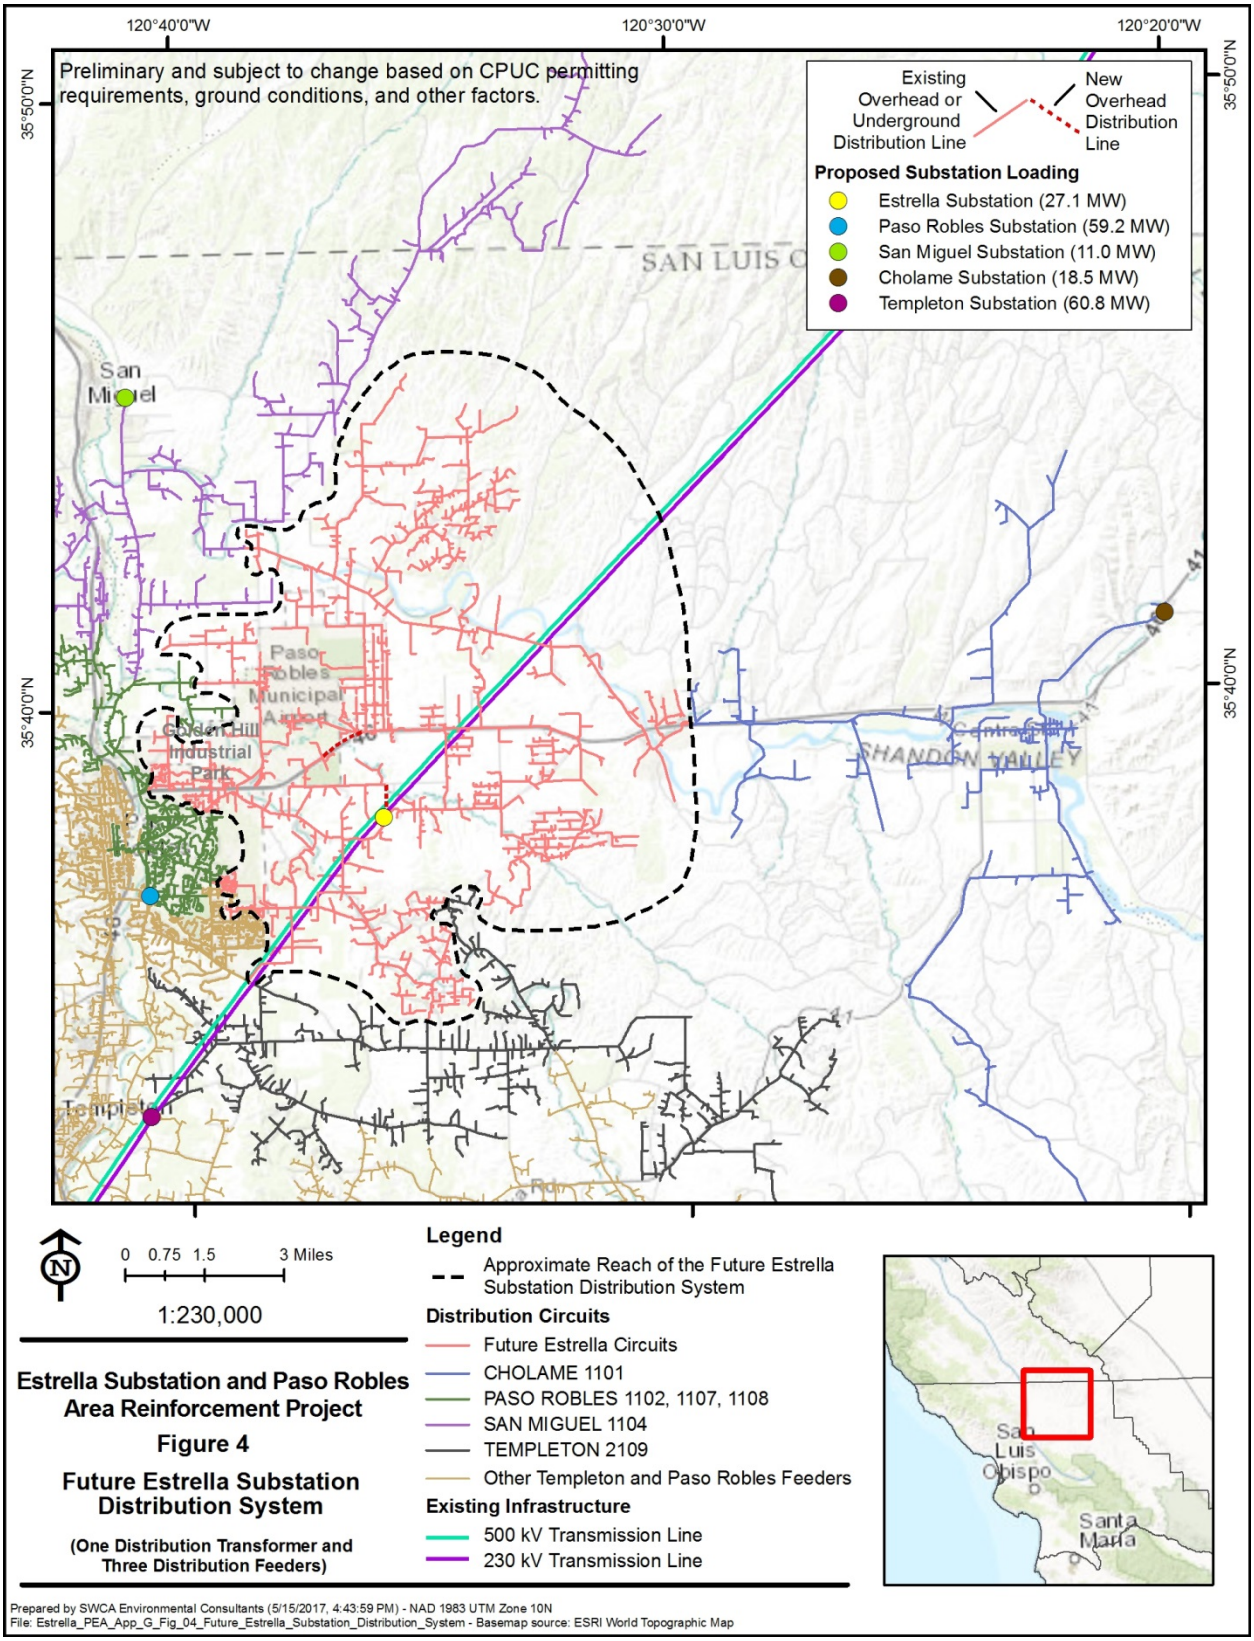


Figure 4. Future Estrella Substation Distribution System

III. TIMING OF NEW DISTRIBUTION SUBSTATION

A. Predictive Factors for Electrical Load Growth

Two primary factors will drive the timing for construction of the new distribution substation: 1) normal growth in area electrical demand and 2) large block loads. Modeling is used to predict normal electrical demand growth within a DPA, based upon many factors, including historic growth patterns, pending business service applications, and—for the first time in 2017—distributed energy resources (DER) estimates. Large block loads, which are generally associated with new business interconnections of 1 MW or more, are difficult to predict accurately due to short lead times and must also be considered because they can significantly accelerate the need for new distribution capacity.

PG&E uses the LoadSEER tool to predict growth in area electrical demand within a DPA for a 10-year period into the future. The 1-in-10 forecast assumes a 90th percentile hot summer with higher-than-average temperatures and intense heat waves. PG&E's goal is to maintain a distribution system that is capable of serving its customers during hot summers without overloads and outages. The Paso Robles DPA is an interior area, sensitive to summer heat with very significant residential and commercial air-conditioning load as well as industrial refrigeration load for the wine industry. Consequently, the 1-in-10 forecast for the DPA must be used to adequately predict DPA capacity needs.

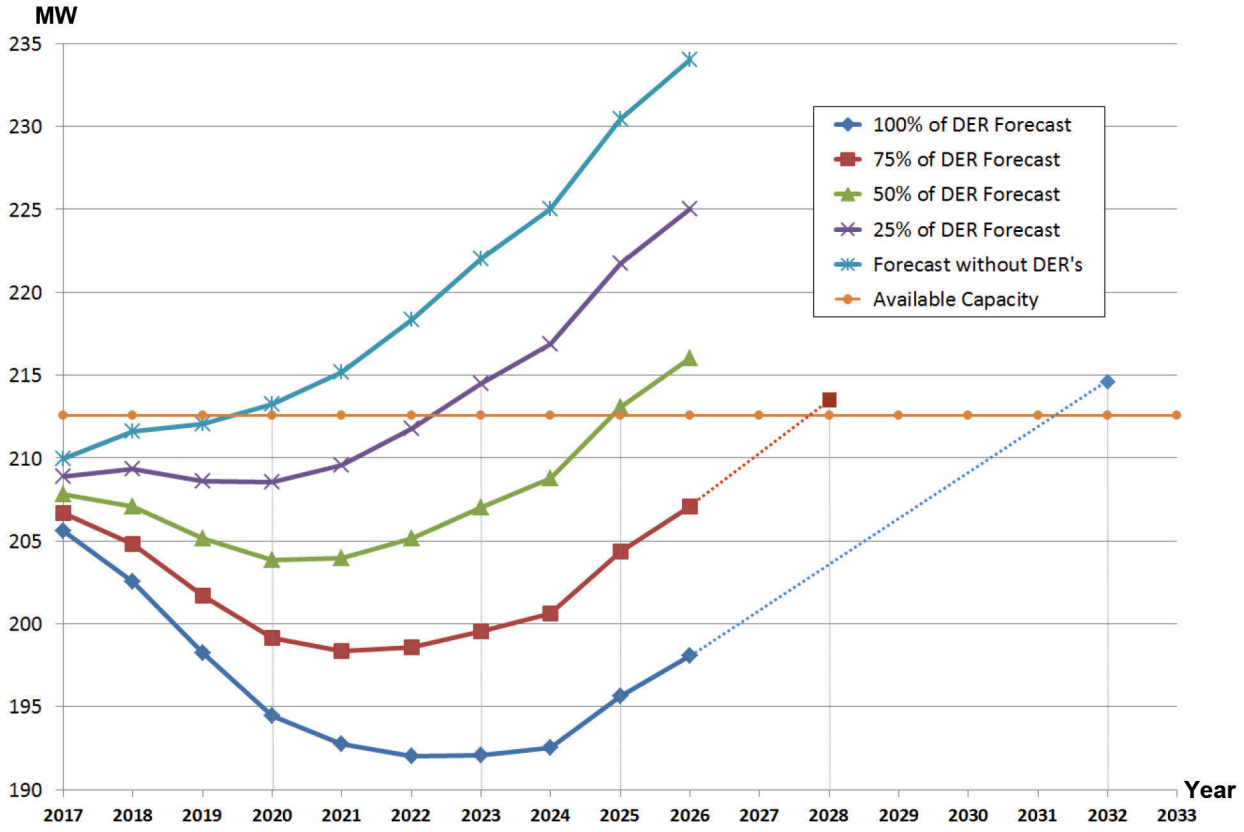
The LoadSEER forecast does not account for all large block loads; unfortunately, large block loads associated with new business interconnections often have short lead times that cannot be anticipated in the LoadSEER modeling. Thus, distribution planners not only review electric demand modeling, but also watch and plan for the possibility of large-demand business applications that will exceed predicted electrical demand.

B. LoadSEER Forecasts

At the request of the California Public Utilities Commission (CPUC), PG&E has updated the previous LoadSEER forecast for the Paso Robles DPA, for the first time incorporating 100% of the DER forecast in the model as proposed by the CPUC and California Energy Commission. The DER forecast is based upon the estimates in PG&E's 2015 Distribution Resource Plan (DRP) for the expected growth rate of DERs, submitted to the CPUC in compliance with Public Utilities Code Section 769. Section 769 defines distributed resources as "distributed renewable generation resources, energy efficiency, energy storage, electric vehicles, and demand response technologies."

After application of 100% of the DER forecast, the LoadSEER tool indicates that load within the Paso Robles DPA will stay within the available capacity of 212.55 MW beyond the 10-year forecast period. An extrapolation of the forecast suggests that load will reach the available DPA capacity in the 2031–2032 timeframe, 14–15 years from now. However, excluding the effects of the DER forecast, load within the Paso Robles DPA would reach available DPA capacity in 2020, only 3 years from now—a very substantial difference in timing. The accuracy of the LoadSEER forecast is thus highly dependent on the accuracy of the DER estimate. Using 25% of the DRP estimate for DER growth, the DPA would reach available capacity in 5–6 years (in 2022–2023); using 50% of the DER forecast, the DPA would reach available capacity in 8 years (in 2025); and using 75% of the DER forecast, the DPA would reach available capacity in 11 years (in 2028). Therefore, if DER peak demand reduction is less than 100% of the DER forecast, the need for an increase in DPA capacity will be much sooner than 2031–2032.

PG&E distribution planning engineers agree that DERs will lower electrical demand to some degree, although they believe that when and how much is uncertain. Based on the assumption that at least 25% of the DER forecast will be realized, these engineers estimate that the need for Estrella distribution facilities will be within the next 5 to 15 years. (*See* Table 2, 1-in-10 LoadSEER Forecast Incorporating Varying



Percentages of the DER Forecast, and Figure 5, 1-in-10 LoadSEER Forecast Incorporating Varying Percentages of the DER Forecast, below for the 1-in-10 LoadSEER forecast for the Paso Robles DPA with varying amounts of demand reduction from DERs.)

The LoadSEER forecast provides only part of the picture because it cannot include unanticipated large block load additions. (*See* Section III.C.)

Table 2. 1-in-10 LoadSEER Forecast Incorporating Varying Percentages of the DER Forecast

Description of Forecast	Available Capacity	Forecasted Load (MW)									
		2017	2018	2019	2020	2021	2022	2023	2024	2025	2026
100% DER Forecast	212.55	205.59	202.53	198.24	194.45	192.78	192.00	192.06	192.51	195.65	198.08
75% DER Forecast	212.55	206.69	204.80	201.70	199.16	198.38	198.59	199.55	200.64	204.36	207.06
50% DER Forecast	212.55	207.79	207.07	205.16	203.87	203.98	205.18	207.03	208.77	213.07	216.05
25% DER Forecast	212.55	208.89	209.33	208.61	208.57	209.58	211.76	214.52	216.89	221.77	225.03
Non-DER Forecast	212.55	209.99	211.60	212.07	213.28	215.18	218.35	222.00	225.02	230.48	234.01

Figure 5. 1-in-10 LoadSEER Forecast Incorporating Varying Percentages of the DER Forecast

As indicated in Section I.B, the Paso Robles DPA has an available capacity limit of 212.55 MW. The most recent DPA peak was 190.15 MW on June 27, 2016, within 23 MW of matching available capacity. This peak was reached during a summer with relatively mild temperatures—not a 1-in-10 summer. All of the substations within the Paso Robles DPA, with the possible exception of San Miguel, are very temperature sensitive, with load rising substantially on hot summer days. A warmer summer would result in a higher peak, much closer to the available capacity limit. As indicated in Table 2, the 1-in-10

LoadSEER forecast incorporating 100% of the DER forecast predicts a DPA peak of almost 206 MW for this summer, 2017; the same forecast incorporating none of the DER forecast predicts a DPA peak of 210 MW for this summer. Using 25% of the DER forecast results in a 209 MW DPA peak, leaving 4 MW of available capacity. Thus, the 1-in-10 forecast predicts only 3 to 7 MW of available capacity in the DPA for 2017. With this small margin, the addition of one or two large-load applications could quickly deplete the remaining capacity, creating an immediate need for more.

It is true that the LoadSEER forecast using the 100% DER forecast indicates a steady reduction in net load during the 5-year period between 2017 and 2022; the forecasted peak demand is 13.59 MW lower in 2022 as compared to 2017. PG&E distribution planning engineers caution against placing too much weight on this forecast because it incorporates 100% of a DER estimate that is being used for the first time and results in a substantial negative electrical growth rate, which is not consistent with past history or recent operating experience. While it is likely that some demand reduction due to DERs will occur within the Paso Robles DPA, the timing and amount is highly uncertain.

Relying on LoadSEER data with 100% DER estimates is particularly risky because underestimating the amount of available power could threaten sensitive industrial customers with major business losses. These manufacturing- or process-oriented businesses are very sensitive to interruptions in electric power that can interrupt assembly processes and cause damage to assembly equipment, costly delays for clean-up and restart, and losses of entire batches of product. Wineries, a growing industry in the area, are particularly sensitive to power outages.

C. Large Block Loads

Large block loads present another risk to electric system capacity; they are difficult to predict accurately and can significantly accelerate the need for new distribution capacity. As members of the local communities it serves, PG&E employees meet with government and business leaders to keep abreast of general plan amendments, building permit trends, and economic indicators. These activities assist in predicting large increases in business electrical demand.

City planners have indicated that a substantial amount of industrial growth is expected to occur south of the Paso Robles Airport within Golden Hill Industrial Park and along Dry Creek Road, including in Aerotech Industrial Park. Wine production is leading industrial growth, with San Antonio Winery's 1 MW facility in Golden Hill Industrial Park nearing completion, and Justin Vineyards' plans to expand when Golden Hill Industrial Park expands. Golden Hill's expansion plans have already been approved by the City. Other large business loads on the horizon include several new hotels or hotel expansions, which may suggest that additional hotel development will follow. (*See* Section II.B.).

The challenge with these types of fast-paced developments is the short lead-time in planning for the increased electrical demand. The effects of large block loads are very difficult to accurately include in the LoadSEER forecast for this reason. In most cases, PG&E learns of these large-load interconnections only 18 to 24 months in advance of operation, from receiving an application to providing service. Of the factors that affect DPA capacity, large new business growth is the most likely to make an impact on distribution capacity and the most difficult to predict.

The City Public Works Director has confirmed that the area south of Paso Robles Airport, including Golden Hill Industrial Park and along Dry Creek Road, is anticipated to be the area of highest growth within the Paso Robles area. If PG&E receives a new business application for a large load in this area, it may exhaust all of the remaining area capacity, or initiate other commercial-industrial load growth that together could quickly outpace capacity. If this were to happen without the Estrella Project in place,

PG&E may be unable to construct additional distribution capacity in time to prevent significant overloads throughout the DPA—at Paso Robles and San Miguel substations in particular.

IV. ESTRELLA PROJECT DISTRIBUTION BENEFITS

A. DPA Capacity Increase

Since the Paso Robles DPA is reaching the limits of its distribution substation capacity, the distribution system is vulnerable. Two unknowns will drive the timing of the need for additional distribution capacity: the amount of DER demand reduction and the addition of large-load interconnections. If DER demand reduction is slow to materialize or if new, large business load is added in Paso Robles, the DPA capacity limits could quickly be reached or exceeded. PG&E's new 70 kV substation at Estrella Substation provides a location for future 21 kV distribution facilities where they are most likely to be needed, and can most easily be constructed and integrated with the existing system. Without the Estrella Substation location, there may be insufficient time to put new distribution capacity in place to prevent significant overloads throughout the DPA, especially at Paso Robles and San Miguel substations.

Adding a new 70/21 kV transformer with three new distribution feeders connected to existing feeders near Estrella Substation can be accomplished in only 4 months and provide approximately 28 MW of additional capacity. The new distribution facilities at Estrella Substation will alleviate overloads within the DPA by creating additional distribution capacity, thus enabling distribution planning engineers to appropriately load substation transformer banks and transfer distribution load throughout the DPA to address needs as they arise.

While large block loads and DER estimates both inject uncertainty into the planning process, one thing is certain: distribution substation facilities will be needed sometime within 5 to 15 years, and could be needed very quickly in response to one or more large-load interconnections that could materialize at any time. The Estrella Project supports this critical future need.

B. Distribution System Reliability Improvements

The addition of a future 70/21 kV source in the Paso Robles DPA at Estrella Substation will not only increase the available capacity of the DPA, but will also allow a feeder configuration from the new substation that will reduce feeder length and provide back-ties to existing distribution feeders from San Miguel, Paso Robles, and Templeton substations. (*See* Figure 4, Future Estrella Substation Distribution System.) Estrella Substation is located near the growth areas south of Paso Robles Airport, enabling the future distribution substation to serve the expected load growth directly through much shorter distribution feeders than could be extended from existing substations. Moreover, with three feeders from the new distribution bank connected into the existing distribution system, Estrella Substation will have direct feeder ties to all substations within the Paso Robles DPA except Atascadero Substation, providing valuable system redundancy. The Paso Robles DPA benefits from the central location of Templeton Substation, with six 21 kV feeders extending north and south to provide strong ties to both Paso Robles and Atascadero substations. The future 21 kV substation at Estrella will also provide a strong tie to Templeton Substation, which will allow cascading transfers north to south or south to north through Templeton to take advantage of available capacity wherever it exists within the DPA.

The future distribution substation at Estrella will also provide a new distribution source closer to Cholame Substation, which serves 1,500 customer connections within the Cholame DPA. The ability to establish strong circuit ties and load relief to multiple substations from a single new source will provide uniform load relief as well as optimize operating flexibility and emergency restoration throughout the Paso Robles and Cholame DPAs.

V. ADDITIONAL DISTRIBUTION Q&A

A. Why Not Expand Distribution at Paso Robles Substation?

Placing additional distribution facilities at Paso Robles Substation is not a viable option. Although the growth in demand is in Paso Robles, load in many northern areas of Paso Robles is currently being served with lengthy feeders from Templeton Substation; Paso Robles Substation has limited capacity and its existing 12 kV feeders cannot accommodate future growth in northern Paso Robles.

Adding a fourth distribution bank at Paso Robles Substation is not possible due to space constraints. For the same reason, replacing the 30 MVA banks with 45 MVA banks is not feasible because there is insufficient space to install additional feeders. PG&E has no existing mobile transformer support for 70/12 kV 45 MVA banks in any event.

Even if Paso Robles Substation had additional capacity and could install feeders within the substation, there is no easy route for new feeders to extend beyond the substation to reach the northern growth areas in Paso Robles. This is a congested urban area with existing 12 kV distribution lines. New feeders would likely be of an express nature, with most of the load being sensitive industrial customers at the ends of the feeders. Because of the congestion, new feeders would need to be combined with existing overhead feeders on double-circuit overhead routes, increasing the likelihood and extent of outages for new and existing customers served by those lines, or placed in lengthy, expensive underground routes. Either choice would be challenging.

B. Why Not Expand Distribution at Templeton Substation?

PG&E's distribution planning practices caution against adding distribution capacity at a location that will degrade service reliability. Since reliable distribution systems consist of substations located at regular intervals and sized correctly, adding more capacity and more 21 kV feeders at Templeton would be a large step backwards. While the existing 21 kV Templeton 2109 Feeder serves areas well north of Paso Robles Substation, it does not serve the growth areas near Paso Robles Airport. This feeder is forecasted to be loaded at over 80% of its capacity in 2017, limiting its ability to be extended to serve the additional load near the airport. This means that additional long or longer new feeders from Templeton Substation would be required to serve the anticipated growth areas north of SR-46. (*See* Figure 1, Approximate Reach of the Existing Templeton Substation 21 kV Distribution Feeders.).

Long feeders are problematic for several reasons. First, as explained previously, long feeders are less reliable simply because of their length and potential for outages that affect many customers. Adding new long feeders from Templeton to northern Paso Robles would further degrade system reliability. Second, in this case, the new feeders would likely be mainly express feeders with much of their load at the end of the line, which would result in most or all customers on the line experiencing an outage if there is trouble anywhere along the lengthy feeder. Third, accessible and maintainable distribution routes north out of Templeton Substation to Paso Robles are limited, and would require lengthy double- or possibly even triple-circuit overhead lines in order to reach areas in Paso Robles. While it is sometimes necessary to place distribution lines on double-circuits, it is not ideal because distribution poles are wood and typically close to roadways. When cars hit wood poles, they generally knock out service; when cars hit poles carrying double- or triple-circuits, customers on multiple circuits may lose power. In rural areas, such as some areas north of Templeton, cars travel at high speeds and wood poles close to roadways are especially vulnerable. With poles carrying multiple lines, a single car-pole accident could take out two or three 21 kV feeders, knocking out a significant number of customers.

In theory, new electric demand south of Paso Robles Airport could be served from Paso Robles Substation, with new distribution feeders out of Templeton Substation taking over additional load in Paso

Robles to free up capacity for the new growth. Cascading load within a well-connected DPA can be a useful tool in many circumstances, so long as service reliability is maintained; however, service reliability is substantially reduced whenever one substation's feeders are overextended and another substation's feeders are either underutilized or doubled-up because they are confined to only one direction of travel. In this case, although cascading load from Paso Robles Substation to Templeton Substation and then adding load at Paso Robles Substation is a possible option, it would once again require long feeders from Templeton Substation to pick up load well north of Paso Robles Substation and then require existing Paso Robles feeders to be rerouted to the new growth areas near the airport. As explained previously, rerouting feeders northeast from Paso Robles Substation to the growth areas near the airport would be especially challenging.

In either case, installing additional, lengthy distribution feeders from Templeton Substation would further compromise reliability in a distribution system that is already out of balance.

BASELINE KEY OBSERVATION POINTS MAP

KEY OBSERVATION POINTS

The following Key Observation Points (KOP) are included in the Proponent's Environmental Assessment analysis and are not included in this document.

- Key Observation Point 1
- Key Observation Point 2
- Key Observation Point 3
- Key Observation Point 4
- Key Observation Point 5
- Key Observation Point 6
- Key Observation Point 7
- Key Observation Point 8

Key Observation Point 9

KOP 9 is looking northwest towards the proposed substation site and existing transmission lines from Union Road. Photograph taken April 26, 2016.

Key Observation Point 10

KOP 10 is looking east toward the proposed substation site and existing transmission lines and from Pear Valley Winery tasting room. Photograph taken April 26, 2016.

Key Observation Point 11

KOP 11 is looking southwest toward existing transmission lines from Mill Road. Photograph taken April 26, 2016.

Key Observation Point 12

KOP 12 is looking northeast towards the proposed substation site and existing transmission lines from Union Road. Photograph taken April 26, 2016.

Key Observation Point 13

KOP 13 is looking west towards the proposed substation site and existing distribution and transmission lines from Union Road. Photograph taken April 26, 2016.

Key Observation Point 14

KOP 14 is looking southeast towards the proposed substation site and existing transmission lines from Mill Road. Photograph taken April 26, 216.

Key Observation Point 15

KOP 15 is looking southwest towards the proposed substation site from Broken Earth Winery located just south of SR-46. Photograph taken April 26, 2016.

Key Observation Point 16

KOP 16 is looking southwest towards the proposed substation site and existing transmission lines from Branch Road. Photograph taken April 26, 2016.

Key Observation Point 17

KOP 17 is looking west (in the direction of the proposed substation site) from the eastern intersection of Union Road and SR-46. Photograph taken April 26, 2016.

Key Observation Point 18

KOP 18 is looking east towards the new 70 kV power line segment and existing distribution poles from Union Road. Photograph taken April 26, 2016.

Key Observation Point 19

KOP 19 is looking east towards the new 70 kV power line segment from Sherwood Park near Paso Robles Golf Course. Photograph taken April 26, 2016.

Key Observation Point 20

KOP 20 is looking north towards the existing transmission lines from Creston Road at Franklin Hot Springs. Photograph taken April 26, 2016.

Key Observation Point 21

KOP 21 is looking northwest towards the proposed substation site from Geneseo Road. Photograph taken April 26, 2016.

Key Observation Point 22

KOP 22 is looking northwest towards the proposed substation site from a private drive off Camino Vino Road. Photograph taken April 26, 2016.

Key Observation Point 23

KOP 23 is looking south towards the proposed substation site from Jardine Road at Links Golf Course. Photograph taken April 26, 2016.

Key Observation Point 24

KOP 24 is looking southeast towards the proposed substation site from Mill Road. Photograph taken April 26, 2016.

Key Observation Point 25

KOP 25 is looking southeast towards the proposed substation site from SR-46. Photograph taken April 26, 2016.

Key Observation Point 26

KOP 26 is looking south towards the proposed substation site from Jardine Road. Photograph taken April 26, 2016.

Key Observation Point 27

KOP 27 is looking north towards the new 70 kV power line segment from Union Road near Huerhuero Creek. Photograph taken April 26, 216.

Key Observation Point 28

KOP 28 is looking east towards the new 70 kV power line segment from Union Road near Huerhuero Creek. Photograph taken April 26, 2016.

Key Observation Point 29

KOP 29 is looking southwest towards the new 70 kV power line segment from Wisteria Lane. Photograph taken April 27, 2016.

Key Observation Point 30

KOP 30 is looking northeast towards the new 70 kV power line segment from Golden Hill Road. Photograph taken April 26, 2016.

Key Observation Point 31

KOP 31 is looking south towards the new 70 kV power line segment from Buena Vista Drive. Photograph taken April 26, 2016.

Key Observation Point 32

KOP 32 is looking west towards the new 70 kV power line segment from a private lane extending off Buena Vista Drive. Photograph taken April 26, 2016.

Key Observation Point 33

KOP 33 is looking north towards the new 70 kV power line segment from Golden Hill Road. Photograph taken October 12, 2016.

Key Observation Point 34

KOP 34 is looking southeast towards the new 70 kV power line segment, the California Register of Historical Resources-eligible Johnson House, and existing Barney Schwartz Park light poles from Union Road. Photograph taken May 25, 2016.

Key Observation Point 35

KOP 35 is looking southwest towards the reconductoring segment and Paso Robles Substation on Cary Street. Photograph taken October 12, 2016.

Key Observation Point 36

KOP 36 is looking south towards the power line route and existing distribution poles from a private drive located just east of River Road. Photograph taken May 24, 2016.

Key Observation Point 37

KOP 37 is looking southwest towards the new 70 kV power line segment from a private drive north of Golden Hill Road. Photograph taken May 24, 2016.

Key Observation Point 38

KOP 38 is looking north along Golden Hill Road of the new 70 kV power line segment in the industrial business district north of SR-46. Photograph taken April 27, 2016.

Key Observation Point 39

KOP 39 is looking north along South River Road along the reconductoring segment, at the Cary Street and South River Road intersection. Photograph taken May 25, 2016.

Key Observation Point 40

KOP 40 is looking north at the reconductoring segment along South River Road from beneath the SR-46 overpass. Photograph taken May 25, 2016.

Key Observation Point 41

KOP 41 is looking north at the reconductoring segment along South River Road approximately 0.35 mile north of the SR-46 overpass. Photograph taken May 25, 2016.

Key Observation Point 42

KOP 42 is looking north along South River Road at the reconductoring segment. Photograph taken May 25, 2016.

Key Observation Point 43

KOP 43 is looking south along South River Road at the reconductoring segment. Photograph taken May 25, 2016.

Key Observation Point 44

KOP 44 is looking south along South River Road at the reconductoring segment. Photograph taken May 25, 2016.

Key Observation Point 45

KOP 45 is looking south at the reconductoring segment along South River Road at the intersection of River Oaks Drive, just north of the SR-46 overpass. Photograph taken May 25, 2016.

Key Observation Point 46

KOP 46 is looking south at the reconductoring segment along South River Road at the intersection of Navajo Avenue, just northwest of the existing Paso Robles Substation. Photograph taken May 25, 2016.

Estrella Substation and Paso Robles Area Reinforcement Project

San Luis Obispo County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	7,144.00	1000sqft	164.00	7,144,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.2	**Precipitation Freq (Days)**	44
Climate Zone	4			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The total area in power line the easement widths, substation temp disturbance, areas for temporary staging and access roads outside of the easement equals approximately 164 acres or a 7,144,000 square feet area

Construction Phase - Based on project schedule and description

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Trips and VMT - Based on equipment roster and schedule provided

On-road Fugitive Dust - Per the user guide 9.3% silt content should be used for the San Luis Obispo region

Grading -

Vehicle Trips - Unmanned operation

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - Energy intensity factors scaled down to match the area occupied by the 230kV Substation Control Enclosure approximately 14 feet wide, 48 feet long, and the 70 kV Substation Control Enclosure approximately 16 feet wide and 64 feet long.

Water And Wastewater - Unmanned facility - No water use is expected

Solid Waste - No solid waste generation is expected

Construction Off-road Equipment Mitigation - Tier 3 compliant engines are assumed for the project

Operational Off-Road Equipment - Assumes monthly inspections and an annual maintenance on the substation components. Helicopter is represented by "Other General Industrial Equipment" with increased HP (400hp)

Stationary Sources - Emergency Generators and Fire Pumps -

Estrella Substation and Paso Robles Area Reinforcement Project

San Luis Obispo County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	7,144.00	1000sqft	164.00	7,144,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.2	**Precipitation Freq (Days)**	44
Climate Zone	4			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The total area in power line the easement widths, substation temp disturbance, areas for temporary staging and access roads outside of the easement equals approximately 164 acres or a 7,144,000 square feet area

Construction Phase - Based on project schedule and description

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Trips and VMT - Based on equipment roster and schedule provided

On-road Fugitive Dust - Per the user guide 9.3% silt content should be used for the San Luis Obispo region

Grading -

Vehicle Trips - Unmanned operation

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - Energy intensity factors scaled down to match the area occupied by the 230kV Substation Control Enclosure approximately 14 feet wide, 48 feet long, and the 70 kV Substation Control Enclosure approximately 16 feet wide and 64 feet long.

Water And Wastewater - Unmanned facility - No water use is expected

Solid Waste - No solid waste generation is expected

Construction Off-road Equipment Mitigation - Tier 3 compliant engines are assumed for the project

Operational Off-Road Equipment - Assumes monthly inspections and an annual maintenance on the substation components. Helicopter is represented by "Other General Industrial Equipment" with increased HP (400hp)

Stationary Sources - Emergency Generators and Fire Pumps -

11.0 Vegetation

Estrella Substation and Paso Robles Area Reinforcement Project

San Luis Obispo County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	7,144.00	1000sqft	164.00	7,144,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.2	**Precipitation Freq (Days)**	44
Climate Zone	4			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The total area in power line the easement widths, substation temp disturbance, areas for temporary staging and access roads outside of the easement equals approximately 164 acres or a 7,144,000 square feet area

Construction Phase - Based on project schedule and description

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule
Off-road Equipment - Based on construction schedule

Off-road Equipment - Based on construction schedule

Trips and VMT - Based on equipment roster and schedule provided

On-road Fugitive Dust - Per the user guide 9.3% silt content should be used for the San Luis Obispo region

Grading -

Vehicle Trips - Unmanned operation

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - Energy intensity factors scaled down to match the area occupied by the 230kV Substation Control Enclosure approximately 14 feet wide, 48 feet long, and the 70 kV Substation Control Enclosure approximately 16 feet wide and 64 feet long.

Water And Wastewater - Unmanned facility - No water use is expected

Solid Waste - No solid waste generation is expected

Construction Off-road Equipment Mitigation - Tier 3 compliant engines are assumed for the project

Operational Off-Road Equipment - Assumes monthly inspections and an annual maintenance on the substation components. Helicopter is represented by "Other General Industrial Equipment" with increased HP (400hp)

Stationary Sources - Emergency Generators and Fire Pumps -

Estrella Substation and Paso Robles Reinforcement

San Luis Obispo County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	10.22	1000sqft	0.23	10,220.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.2	**Precipitation Freq (Days)**	44
Climate Zone	4			**Operational Year**	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project Characteristics

Land Use - The total project area for the future distribution facilities is approximately 10219 square feet

Construction Phase - Based on construction schedule

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Base on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equiment roster and schedule provided

Trips and VMT - Based on worker roster construction schedule and project description

On-road Fugitive Dust - Per the user guide for the SLO region 9.3 material silt content 0.1 material moisture content and 32.4 mph mean vehicle speed

Grading - No grading is expected

Vehicle Trips - Project located within the 70kV substation

Vechicle Emission Factors -

Vechicle Emission Factors -

Vechicle Emission Factors -

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - There is no building that will use energy

Water And Wastewater - Unmmaned facility no water consumption assumed

Solid Waste - Unmmaned facility

Construction Off-road Equipment Mitigation -

Landscape Equipment - No landscaping activities are assumed for the project

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Base on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equiment roster and schedule provided

Trips and VMT - Based on worker roster construction schedule and project description

On-road Fugitive Dust - Per the user guide for the SLO region 9.3 material silt content 0.1 material moisture content and 32.4 mph mean vehicle speed

Grading - No grading is expected

Vehicle Trips - Project located within the 70kV substation

Vechicle Emission Factors -

Vechicle Emission Factors -

Vechicle Emission Factors -

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - There is no building that will use energy

Water And Wastewater - Unmmaned facility no water consumption assumed

Solid Waste - Unmmaned facility

Construction Off-road Equipment Mitigation -

Landscape Equipment - No landscaping activities are assumed for the project

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project Characteristics

Land Use - The total project area for the future distribution facilities is approximately 10219 square feet

Construction Phase - Based on construction schedule

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Base on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equipment roster and schedule provided

Off-road Equipment - Based on equiment roster and schedule provided

Trips and VMT - Based on worker roster construction schedule and project description

On-road Fugitive Dust - Per the user guide for the SLO region 9.3 material silt content 0.1 material moisture content and 32.4 mph mean vehicle speed

Grading - No grading is expected

Vehicle Trips - Project located within the 70kV substation

Vechicle Emission Factors -

Vechicle Emission Factors -

Vechicle Emission Factors -

Consumer Products - No consumer product utilization was assumed for the project

Area Coating - No architectural coating is assumed for the project

Energy Use - There is no building that will use energy

Water And Wastewater - Unmmaned facility no water consumption assumed

Solid Waste - Unmmaned facility

Construction Off-road Equipment Mitigation -

Landscape Equipment - No landscaping activities are assumed for the project

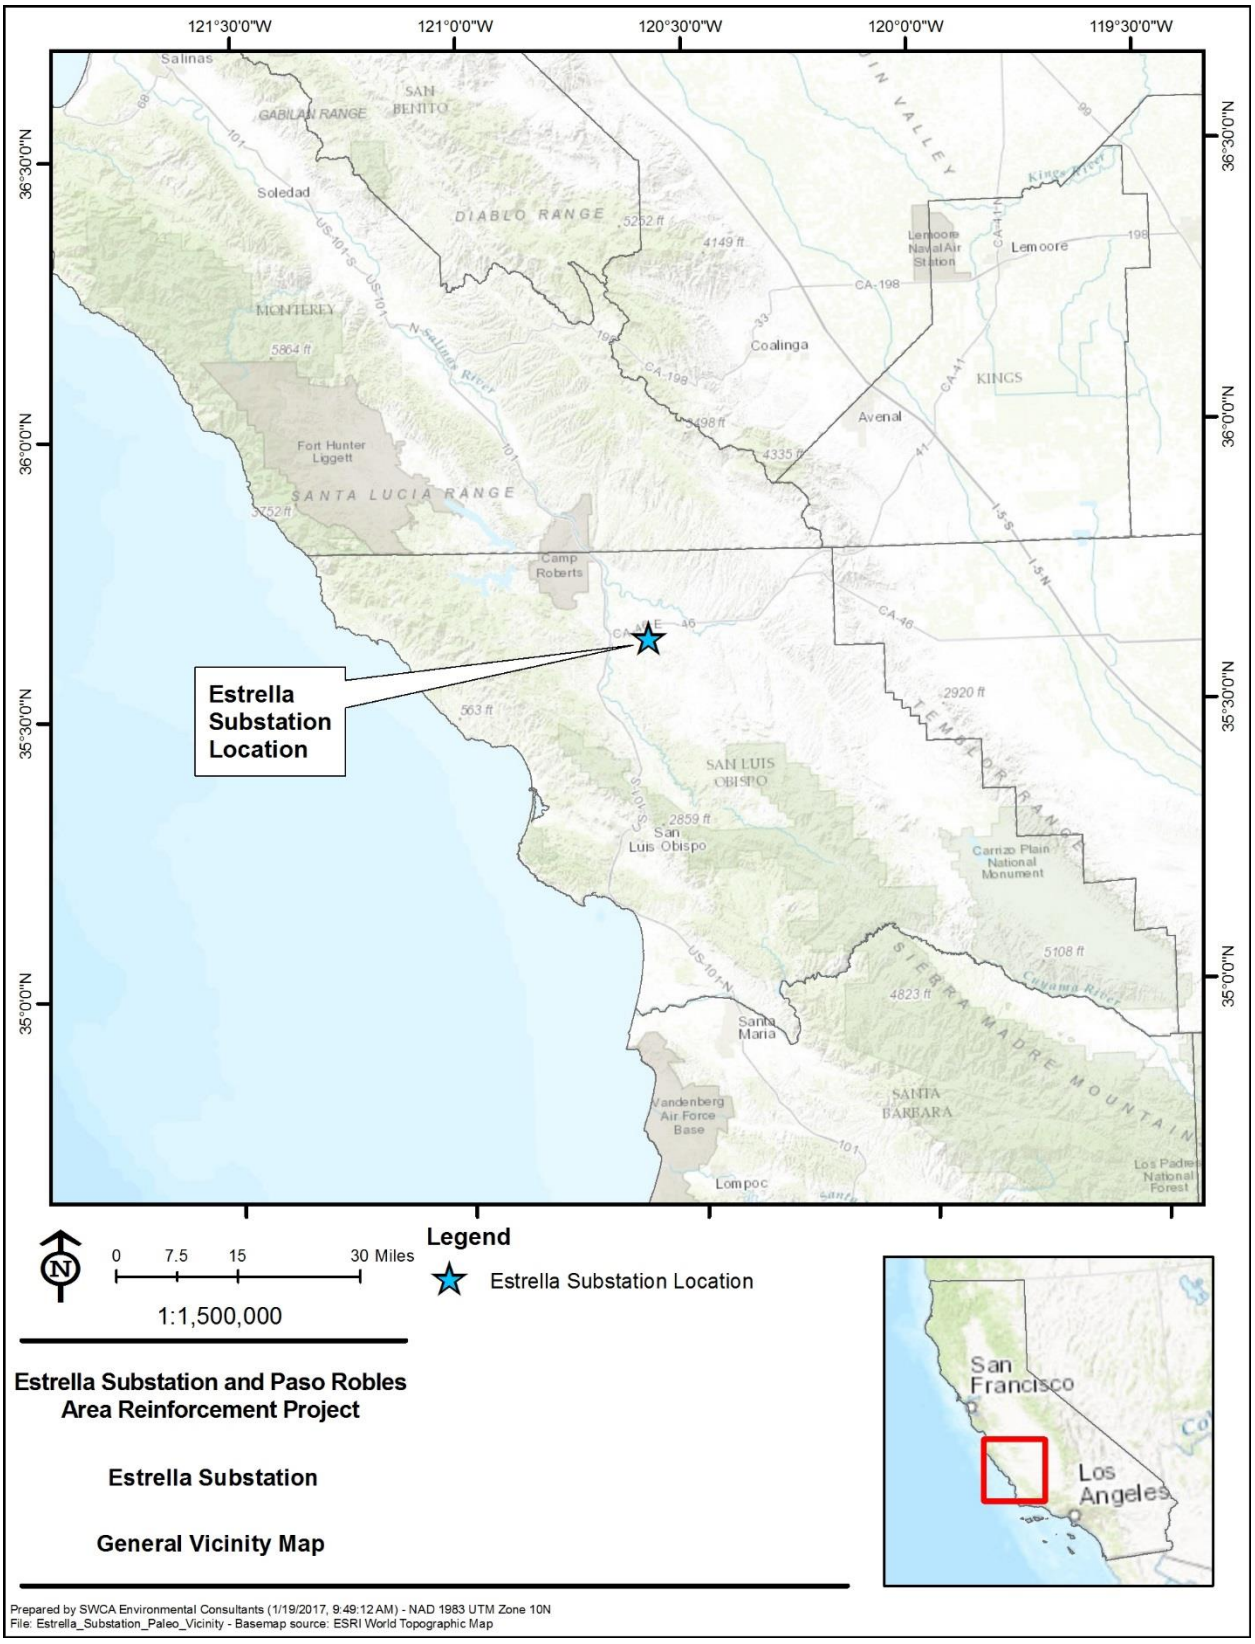
1 INTRODUCTION

NextEra Energy Transmission West, LLC (NEET West) proposes to construct and operate a 230 kilovolt (kV) substation and conduct the site preparation activities for a 70 kV substation to be constructed and operated by Pacific Gas and Electric Company (PG&E) that together comprise Estrella Substation, in northern San Luis Obispo County, California (Figure 1). NEET West is undertaking this effort as part of the larger Estrella Substation and Paso Robles Area Reinforcement Project (project) proposed jointly by NEET West and PG&E.

This Baseline Community Noise Survey was conducted from May 11 to May 14, 2016, to document the existing ambient acoustic environment in the area, and provides a summary of the noise monitoring results for the area surrounding Estrella Substation. This report briefly describes the area monitored, provides a map showing the location of the substation and location of the sound monitors, provides a description of the sound level meters used, a description of the metrics recorded, and a summary of sound level readings collected at the monitoring locations.

1.1 Project Location



The project substation site is located in north-central San Luis Obispo County, California, within an existing vineyard, approximately 30 miles east of the Pacific Coast (Figures 1 and 2). The nearest communities to the project substation site are the city of Paso Robles, which is approximately 5 miles to the west, the community of San Miguel, approximately 9.25 miles to the northwest, and the community of Templeton, approximately 8.5 miles to the southwest. Land uses in the vicinity of the project substation site are comprised of a mixture of intensive agriculture, as well as urban and rural residential developments. The project substation site is located on approximately 15 acres within an approximately 98-acre privately owned parcel (Assessor's Parcel Number [APN] 015-053-011).

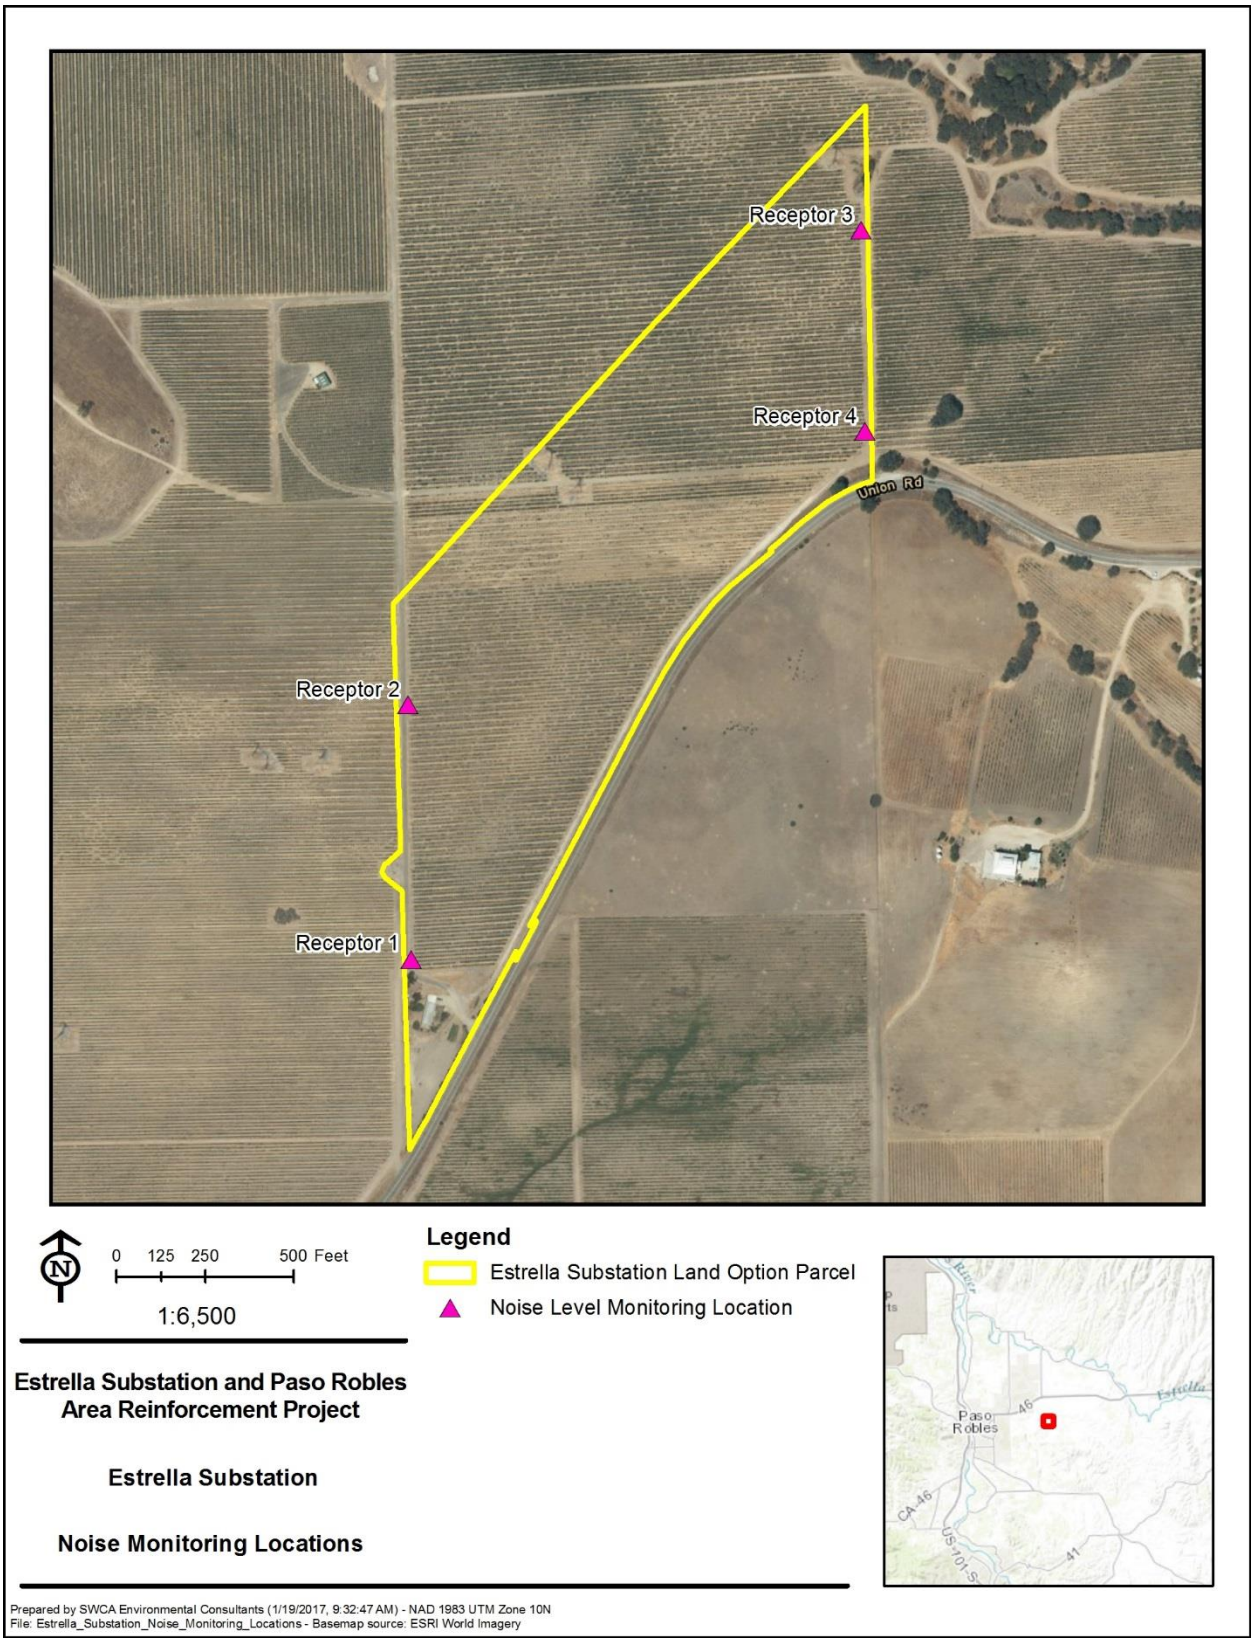
1.2 Project Description

The project substation component includes the construction and operation of the new 230/70 kV Estrella Substation that will be interconnected to an existing 230 kV transmission line and to a 70 kV power line segment extending from Estrella Substation to the existing Paso Robles Substation. NEET West will construct and operate the 230 kV substation and conduct the site preparation activities for the 70 kV substation to be constructed and operated by PG&E that together comprise Estrella Substation.

This report focuses on the components of Estrella Substation.

Figure 1. General Vicinity Map

2 MEASUREMENT LOCATIONS



Four noise monitoring locations were selected to provide the existing ambient noise levels at and near the site (Figure 2). The specific placement of the sound level meters was mainly determined by environmental and logistical constraints. Microphones were placed 5 feet above ground for all measurements. Sites were selected to be representative of the land use in the vicinity of the proposed project. Photographs from the noise monitoring sites are shown in Appendix A. Monitoring locations are mapped on Figure 1 and described below and in Table 1.

- **Location 1:** Represents the south corner of the project. Monitor was located 110 feet north from an inhabited mobile home and approximately 50 feet northwest from an 18-foot-tall tree.
- **Location 2:** At the northwest end of the proposed project location. Monitor was located 65 feet south from overhead transmission lines.
- **Location 3:** Located at the northeast corner of the property. Monitor was located 100 feet south from transmission tower and transmission lines.
- **Location 4:** Located 150 feet north of Union Road at the southeast corner of the proposed project.

Table 1. Noise Monitoring Locations

Receptor	Receptor Location		Elevation	Dominant Background Noise Source
	Latitude	Longitude		
Location 1	35.634540°	-120.601172°	939 feet	Road traffic, birds chirping
Location 2	35.636513°	-120.601145°	951 feet	Road traffic, power line hum
Location 3	35.640102°	-120.596735°	922 feet	Road traffic, power line hum
Location 4	35.638546°	-120.596744°	927 feet	Road traffic, birds chirping

Figure 2. Noise Monitoring Locations Map

3 INSTRUMENT DESCRIPTION

Noise measurements were collected using four Larson Davis Precision Integrating Sound Level Meters Model 831, meeting the requirements of the American National Standards Institute (ANSI); four PCB PRM831 preamplifiers; and four PCB 377B02 0.5-inch free-field microphones, as described in Table 2. Microphones where fitted with an environmental windscreen and bird spikes, set upon a tripod at a height of 5 feet above ground, and located as far from the influence of vertical reflective sources as possible. All cables were secured to prevent any sounds do to wiring hitting other objects. All clocks associated with the sound measurement were synchronized using the Larson Davis G4 LD Utility software.

Table 2. Instrumentation

Monitoring Location	Sound Level Meter	Preamplifier	Free-Field Microphone
Location 1	Larson Davis 831 (S/N 0002442)	PRM831 (S/N 16891)	377B02 (S/N LW135943)
Location 2	Larson Davis 831 (S/N 0003215)	PRM831 (S/N 12437)	377B02 (S/N LW135962)
Location 3	Larson Davis 831 (S/N 0003328)	PRM831 (S/N 19226)	377B02 (S/N LW132432)
Location 4	Larson Davis 831 (S/N 0003219)	PRM831 (S/N 25993)	377B02 (S/N LW150775)

3.1 Calibration Checks

The sound level meters were calibrated at the beginning and end of the measurement period using a Larson Davis Model CAL200 acoustic calibrator. The Larson Davis CAL200 emits a 1-kilohertz (kHz) tone at 114 decibels (dB) against which the response can be checked. Instrument calibration certificates for the 831 sound level meters, the microphone, and the Larson Davis CAL200 calibrator are included in Appendix B. As recommended by Larson Davis, when using a free-field microphone, the pressure level at the microphone diaphragm will be slightly different. Thus, a free field correction of -0.12 dB was applied to the 114.0 dB tone. All four LD 831s showed a response of less than the normal error of 0.5 dB. The results for the calibrations are shown in Table 3.

Table 3. Pre- and Post-Instrument Response Checks

Instrument Setup	Test	Sound Level	Response	Error
S/N 0002442	Pre-Test (5-11-2016)	114 dB (113.88 dB)	113.74 dB	-0.07 dB
	Post-Test (5-14-2016)	114 dB (113.88 dB)	113.69 dB	-0.12 dB
S/N 0003215	Pre-Test (5-11-2016)	114 dB (113.88 dB)	114.08 dB	0.2 dB
	Post-Test (5-14-2016)	114 dB (113.88 dB)	113.81 dB	-0.07 dB
S/N 0003328	Pre-Test (5-11-2016)	114 dB (113.88 dB)	114.17 dB	0.36 dB
	Post-Test (5-14-2016)	114 dB (113.88 dB)	113.43 dB	-0.38 dB
S/N 0003219	Pre-Test (5-11-2016)	114 dB (113.88 dB)	113.82 dB	0.01 dB
	Post-Test (5-14-2016)	114 dB (113.88 dB)	114.17 dB	0.25 dB

4 NOISE DESCRIPTORS

A number of different descriptors of time averaged noise levels are used to account for fluctuations of noise intensity over time. The noise descriptors calculated by the sound meters and used in this report to describe environmental noise are defined below.

- A-weighted Sound Level, describes a receiver's noise at any moment in time. A-weighting is an internationally standardized frequency weighting used to account for the relative loudness as perceived by the human ear at different frequencies.
- Maximum Sound Level (L_{max}) describes the highest noise level occurring during a single noise event.
- Minimum Sound Level (L_{min}) describes the lowest noise level occurring during a single noise event.
- The Equivalent Sound Level (L_{eq}) describes the average noise exposure from all events over a specified period of time.
- 1-hour Equivalent Sound Level (1-hour L_{eq}) corresponds to the average noise exposure from all noise events over a 1-hour period.
- The Day-Night Average Sound Level (L_{DN}) describes the cumulative noise exposure from all events over a full 24 hours, with events between 10:00 p.m. and 7:00 a.m. increased by 10 dB to account for greater nighttime sensitivity to noise.
- Community Noise Level (CNEL) is similar to L_{DN}, but with a 5 A-weighted decibel (dBA) penalty added to evening noise (7:00 p.m.–10:00 p.m.) and a 10 dBA penalty to nighttime noise (10:00 p.m. to 7:00 a.m.).
- L_{50} represents the noise level in dBA that is exceeded 50% of the time during the measurement period.
- L_{90} represents the sound level exceeded 90% of the time during the measurement period.

5 METEOROLOGICAL DATA

Noise data was validated against weather data from the Firehouse Base (BLK20) weather station located at the Firehouse Vineyards, approximately 2 miles north of the proposed site, and part of the Vino Weather Network. Weather information is presented in Appendix C. Survey weather conditions are shown in Table 4.

Table 4. Weather Conditions: May 11–May 14, 2016

Weather Station	Monitoring Start	Monitoring End	Wind Speed (mph)		Temperature (ºF)*		Humidity (% relative)	
			Range	Average	Range	Average	Range	Average
Firehouse Base Station (BLK20)	5/11/2016 8:00 a.m.	5/14/2016 10:00 a.m.	0–5.6	2.44	42.3–87.8	61.1	28–97	68.75

* ºF – degrees Fahrenheit

ASTM International E1014-12 specifies that data should not be used when steady wind speeds exceed 20 kilometers per hour (12.4 miles per hour). No hourly sound level data points were removed from the data set, as no inclement weather or high steady winds were recorded.

6 READINGS

Noise measurements were conducted from May 11 to May 14, 2016. Data was collected for a total of 72 continuous hours, sound levels were recorded over each 15 minute and 1 hour intervals. Start and stop times for the four sound level meters are presented in Table 5 of the Section 7, Results.

The sound level meters were programmed to sample and store A-weighted sound level data including Leq, percentile levels, and community sound parameters. The following gives brief description of the methodology used for the sound data collection.

- A-weighted sound level was selected.
- Sound meter was set on "slow" response.
- Sound events over 50 dB were counted and logged.
- During noise measurements, any dominant background noise source was noted.
- Weather conditions were observed and documented.

After the initial deployment, each sound meter was visited three times per day. Field data sheets were completed during each visit, and are provided in Appendix D.

7 RESULTS

Data collection began on May 11, 2016, and continued through May 14, 2016. Summary data for this period of time is presented in Table 5. Table 5 presents the measured A-weighted L_{eq}, L_{DN}, CNEL, L_{min}, L_{max}, L_{50} and L_{90} for each of the monitoring locations. Hourly and 15-minute data is presented in Appendix C.

Table 5. Summary of Ambient Sound Measurements

Monitoring Location	Monitoring Start	Monitoring End	Elapsed Time	Measured Noise Levels						
				L_{eq}	L_{DN}	CNEL	L_{min}	L_{max}	L_{50}	L_{90}
Location 1	5/11/2016 9:44 a.m.	5/14/2016 9:44 a.m.	72 hours	48.4	52.8	53.3	23.9	88.9	42.1	33.7
Location 2	5/11/2016 9:12 a.m.	5/14/2016 9:12 a.m.	72 hours	47.6	50.0	50.9	24.7	80.5	39.1	32.4
Location 3	5/11/2016 8:30 a.m.	5/14/2016 8:30 a.m.	72 hours	45.7	50.4	50.9	27.9	77.6	39.8	34.3
Location 4	5/11/2016 8:45 a.m.	5/14/2016 8:45 a.m.	72 hours	50.5	53.2	53.7	22.9	80.9	41.5	32.2

Observed noise sources that contributed to the existing sound level at the project location included wind in trees and vines, traffic on Union Road, birds, transmission lines, all-terrain vehicles, and on-site traffic. Day and times of the occurrences of these generating sound activities are presented in the field logs in Appendix D. No data was excluded from the results due to interference as all the major noise contributing sources were found representative of the ambient sound that is to be documented.

Larson Davis	LDSigGen/2239	0760/0109	4/14/2016

This Certificate attests that this instrument has been calibrated under the stated conditions with Measurement and Test Equipment (M&TE) Standards traceable to the National Institute of Standards and Technology (NIST). All of the Measurement Standards have been calibrated to their manufacturers' specified accuracy / uncertainty. Evidence of traceability and accuracy is on file at The Modal Shop and/or Larson Davis Corporate Headquarters. An acceptable accuracy ratio between the Standard(s) and the item calibrated has been maintained. This instrument meets or exceeds the manufacturer's published specification unless noted.

This calibration complies with ISO 17025 and ANSI Z540. The collective uncertainty of the Measurement Standard used does not exceed 25% of the applicable tolerance for each characteristic calibrated unless otherwise noted.

The results documented in this certificate relate only to the item(s) calibrated or tested. Calibration interval assignment and adjustment are the responsibility of the end user. This certificate may not be reproduced, except in full, without the written approval of The Modal Shop.

Upon receipt for testing, this instrument was found to be:

Within the Stated tolerance of the manufacturer's specification

Calibration Date: 29-Mar-16 Calibration Due:

Calibration Standards Used:

Manufacturer	Model	Serial Number	Cal Due
Larson Davis	LDSigGen/2239	0760/0109	4/14/2016

This Certificate attests that this instrument has been calibrated under the stated conditions with Measurement and Test Equipment (M&TE) Standards traceable to the National Institute of Standards and Technology (NIST). All of the Measurement Standards have been calibrated to their manufacturers' specified accuracy / uncertainty. Evidence of traceability and accuracy is on file at The Modal Shop and/or Larson Davis Corporate Headquarters. An acceptable accuracy ratio between the Standard(s) and the item calibrated has been maintained. This instrument meets or exceeds the manufacturer's published specification unless noted.

This calibration complies with ISO 17025 and ANSI Z540. The collective uncertainty of the Measurement Standard used does not exceed 25% of the applicable tolerance for each characteristic calibrated unless otherwise noted.

The results documented in this certificate relate only to the item(s) calibrated or tested. Calibration interval assignment and adjustment are the responsibility of the end user. This certificate may not be reproduced, except in full, without the written approval of The Modal Shop.

Calibration Certificate

Certificate Number 2015007807

Customer:
The Modal Shop
3149 East Kemper Road
Cincinnati, OH 45241, United States

Model Number	CAL200	***Procedure Number***	D0001.8386		
Serial Number	12370	***Technician***	Scott Montgomery		
Test Results	**Pass**	***Calibration Date***	17 Aug 2015		
Initial Condition	As Manufactured	***Calibration Due***			
		Temperature	24	°C	± 0.3 °C
Description	Larson Davis CAL200 Acoustic Calibrator	***Humidity***	34	%RH	± 3 %RH
		Static Pressure	101.2	kPa	± 1 kPa

Evaluation Method The data is aquired by the insert voltage calibration method using the reference microphone's open circuit sensitivity. Data reported in dB re 20 µPa.

Compliance Standards Compliant to Manufacturer Specifications per D0001.8190 and the following standards:
IEC 60942:2003 ANSI S1.40-2006

Issuing lab certifies that the instrument described above meets or exceeds all specifications as stated in the referenced procedure (unless otherwise noted). It has been calibrated using measurement standards traceable to the SI through the National Institute of Standards and Technology (NIST), or other national measurement institutes, and meets the requirements of ISO/IEC 17025:2005.
Test points marked with a ‡ in the uncertainties column do not fall within this laboratory's scope of accreditation.

The quality system is registered to ISO 9001:2008.

This calibration is a direct comparison of the unit under test to the listed reference standards and did not involve any sampling plans to complete. No allowance has been made for the instability of the test device due to use, time, etc. Such allowances would be made by the customer as needed.

The uncertainties were computed in accordance with the ISO Guide to the Expression of Uncertainty in Measurement (GUM). A coverage factor of approximately 2 sigma (k=2) has been applied to the standard uncertainty to express the expanded uncertainty at approximately 95% confidence level.

This report may not be reproduced, except in full, unless permission for the publication of an approved abstract is obtained in writing from the organization issuing this report.

Re: Geotechnical Report
Estrella Substation
San Luis Obispo County, California
RRC Project No. GE1603002

Dear Mr. Bulich:

RRC Power & Energy, LLC (RRC) has completed the authorized subsurface exploration and geotechnical engineering evaluation for the proposed Estrella substation. The purpose of the geotechnical engineering study was to explore and evaluate the subsurface conditions at various locations within the project footprint, and develop geotechnical design and construction recommendations for the project. The attached report contains:

- A description of our findings from the field exploration and laboratory-testing program;
- Our engineering interpretation of the results with respect to the project characteristics; and,
- Our geotechnical site development and foundation design recommendations for the planned project.

We appreciate the opportunity to be of service to NextEra Energy Transmission West LLC and are prepared to provide construction materials testing services during the construction phase of the project. Please call us if you have any questions concerning this report or any of our services.

Respectfully submitted,
RRC Power and Energy, LLC (RRC)

Randolph G. Carri, E.I. (CO)
Geotechnical Engineer

EXECUTIVE SUMMARY

The Estrella Substation project site lies within the Salinas River Valley and is nestled in a valley between coastal mountain ranges of California. To the north-northeast lies the Diablo Mountain Range, to the west of the project site the Santa Lucia Mountain Range, and to the south-southwest the San Luis Obispo Mountain Range. The project site sits atop the valley's sediments of the Paso Robles Formation, comprised of weakly indurated alluvial deposits eroded from local mountain ranges.

According to the USGS' database on faults active within the last 1.6 million years, there are two unnamed faults located approximately 2 miles southwest of the project site. In addition, the Rinconada fault zone is located west-southwest of the project site, along the western edge of the city of Paso Robles. Studies on the recurrence interval of earthquakes estimates an interval of 1,883 years, assumed a slip rate of 2.4 mm per year and the potential to produce a magnitude 7.6 earthquake. The proposed Estrella substation project site may experience strong ground shaking caused by moderate to strong earthquake during the anticipated life expectancy of the planned project development. The potential for damage due to ground shaking can be mitigated through proper design of the facilities and structures, as recommended in applicable building codes using seismic coefficients and design parameters recommended in this report.

The California Department of Conservation maintains a database of the potential for ground ruptures along active faults. The Estrella substation project site is not located within an established AP Earthquake Fault Zone.

A total of 11 geotechnical borings were drilled to depths in the range of about 35.5 to 45.5 feet below existing site grade within the footprint of the substation. Native soils were encountered beneath approximately 8 to 12 inches of topsoil. The native soils extended the full depth of exploration. Bedrock materials were not encountered to the full depth of the exploration.

Groundwater was not encountered at the time of drilling and immediately after completion of the drilling operations. Based upon review of published well logs near the project site, static groundwater levels were reported to be between 54 and 227 feet below the ground surface.

Based on the proposed site grading plan, cut and fill depths are up to 12.5 feet and 14 feet respectively. For grading purposes the on-site clay and sand soils are considered suitable for reuse for support of foundations, concrete slabs and roadways.

Soft clay soils and very loose sand soils were encountered in Borings B02 and B05 at approximate depths of 3 to 4 feet below existing grade (estimated construction elevation). In order to improve foundation bearing capacity and to limit excessive settlement of foundation soils, we recommend the soft clay soils and loose sand soils be partially removed to a minimum depth of 4 feet or to a competent layer, and then proof rolled prior to placing fill material.

The proposed substation site appears suitable for construction. The use of shallow foundation systems for support of lightly-loaded elements of the substation is considered acceptable. The use of drilled pier foundations for elements of the substation with heavy axial and overturning moments will be required.

The aggregate base course section thickness design is based upon the methodology outlined by the American Association of State Highways and Transportation Officials (AASHTO) for design of aggregate-surfaced roadways.

Slope stability analysis was performed using SlopeW prgram and Spencer's Method to evaluate the stability of critical cut and fill sections under static load case. Our slope stability analyses shows that factory of safety of 1.6 for cut section and factor of safety of 1.9 for typical fill sections slopes meet or exceed the Federal Highway Administration (FHWA) and US Army Corps of Engineer (USCOE) criteria.

GEOTECHNICAL REPORT

ESTRELLA SUBSTATION
SAN LUIS OBISPO COUNTY, CALIFORNIA

1.0 INTRODUCTION

RRC Power & Energy, LLC (RRC) is pleased to submit this geotechnical report to provide geotechnical engineering and construction recommendations for the proposed Estrella substation. The substation site is located approximately 3.3 miles east of the City of Paso Robles within San Luis Obispo County, California. The approximate location of the proposed substation is shown on Figure 1, Site Location Map, within Appendix A.

Detailed field exploration, foundation design and construction recommendations are discussed in detail below.

2.0 FIELD EXPLORATION

Field exploration consisted of drilling a total of 11 borings within the boundary of the substation's footprint during the period of April 12 to April 14, 2016. The exploratory borings were drilled to depths in the range of about 35.5 to 45.5 feet below existing site grade.

Prior to the drilling operations, the boring locations were surveyed in the field by Pacific Coast Survey & Design Group, Inc. Each boring location was initially marked in the field based on the coordinates provided on the *Boring Location Plan* prepared by *ECI Consultants Inc. (ECI)* dated November 19, 2015. To minimize damage to the existing vineyard, each boring location was offset and staked within a maximum distance of 4.6 feet from the provided coordinates under the direction of RRC's field engineer. The GPS coordinates of the revised location where each substation boring was staked and drilled are presented in Table 2.0.1.

The boring locations were surveyed using the RTK method with a reported accuracy of approximately one-tenth of a foot in the horizontal and vertical directions. It should be noted, Boring B07 was moved approximately 60 feet west from the original staked location at the time of drilling due to the steep terrain of the site. The GPS coordinates for the relocated Boring B07 were obtained in the field using a hand held GPS unit with an accuracy of approximately 15 to 30 feet. The accuracy of the boring locations should only be assumed to the level implied by the methods used. Figure 2, Substation Boring Locations on a Topographic Map, within Appendix A shows the drilled boring locations.

Table 2.0.1 Summary of Borings as Drilled Geographic Coordinates

Boring No.	Northing	Easting	Latitude	Longitude	Boring Depth (ft.)
B01	2,428,103.35	5,789,080.02	35.636837	-120.600063	45.5
B02	2,428,293.31	5,789,266.01	35.637372	-120.599454	45.5
B03	2,428,427.62	5,789,411.81	35.637751	-120.598975	45.5
B04	2,428,016.32	5,789,147.33	35.636603	-120.599829	35.5
B05	2,428,195.86	5,789,360.96	35.637111	-120.599126	35.5
B06	2,428,330.47	5,789,506.97	35.637491	-120.598646	35.5
B07*	2,427,918.20	5,789,223.95	35.636347	-120.599769	40.5
B08	2,428,451.29	5,789,513.05	35.637823	-120.598636	45.5
B09	2,427,749.92	5,788,998.50	35.635861	-120.600306	45.5
B10	2,427,880.51	5,788,922.30	35.636214	-120.600574	45.5
B11	2,427,571.53	5,788,869.63	35.635362	-120.600724	35.5

Note: * GPS coordinates for B07 were obtained with a hand held GPS unit.

The borings were advanced to the full depth of exploration with a CME 75 truck mounted drill rig utilizing hollow stem auger drilling techniques. Relatively disturbed samples were obtained using Standard Penetration Test (SPT) samplers. Penetration resistance values were recorded using methods based on the standard penetration test (SPT), in accordance with ASTM D1586: Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils. This test consists of driving the sampler into the ground with a 140-pound hammer free-falling a distance of 30 inches. The number of blows required to advance the sampler 18 inches is counted and recorded, with the sum of the blows to drive the last 12 inches referred to as the standard penetration resistance value (N-value) for SPT samplers. Results of the field tests are shown on the logs of boring under the “Field Data” column and are preceded by the letter “N”. Subsurface materials were collected from the SPT samplers in the field, visually classified, placed in plastic bags, and labeled as to location and depth. All SPT samples were transported to the laboratory for further analysis.

The depths of the borings and sampling frequency of the subsurface soils were adjusted for cut and fill depths based on the proposed *Site Grading Plan* prepared by ECI dated December 23, 2015. Table 2.0.2 shows the approximate boring surface and proposed construction grade elevation, and estimated cut and fills depth at each boring location.

Table 2.0.2 Summary of Cut and Fill Depths

Boring No.	Approximate Boring Surface Elevation (ft.)	Approximate Proposed Construction Grade Elevation (ft.)	Approximate Cut (-) or Fill (+) (ft.)
B01	954.2	948.4	-5.8
B02	937.9	947.2	+9.3
B03	948.7	946.2	-2.5

Boring No.	Approximate Boring Surface Elevation (ft.)	Approximate Proposed Construction Grade Elevation (ft.)	Approximate Cut (-) or Fill (+) (ft.)
B04	954.0	946.6	-7.4
B05	938.0	944.8	+6.8
B06	934.5	943.8	+9.3
B07	N.A.	945.5	-5.5
B08	948.6	N.A.	N.A.
B09	948.4	943.2	-5.2
B10	957.8	946.1	-11.7
B11	946.1	940.2	-5.9

* N.A. = Not available

A representative bulk sample of the subgrade materials was also obtained from Boring No. 11 for maximum dry density-optimum moisture content relationships.

Soils were classified in general accordance with the Unified Soil Classification System (USCS); ASTM D2488: Standard Practice for Description and Identification of Soils (Visual-Manual Procedure). The soil classification symbols appeared on the logs of boring are briefly described in Appendix A. Local and regional geologic characteristics were used to estimate seismic design criteria.

Field logs were prepared for each boring at the time of drilling by RRC's field engineer. The project engineer and geologist reviewed the field logs of boring, soil samples, and made appropriate modifications to the logs of boring as necessary.

The field logs of boring contain visual classification of the soils encountered during drilling as well as interpolation of the subsurface conditions between samples. Final logs of boring, included in Appendix A, represent our interpretation of the field logs of boring and may include modifications based on laboratory testing performed on select samples. The final logs of boring describe the materials encountered, their approximate thickness, and the various depths at which the samples were obtained.

The field tests were conducted in general accordance with the basic requirements of the following:

- ASTM D1586: Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils; and
- Locally accepted practices in this area.

During the drilling operations, the borings were observed for groundwater levels which are noted at the top of the logs of boring. Following the completion of the drilling operations, the borings were backfilled in accordance with state regulations.

3.0 SUBSURFACE GEOLOGY, STRATIGRAPHY AND GROUNDWATER CONDITIONS

3.1 Geology

The geologic interpretations contained herein are based on available geological maps and literature (References 1 and 2), and review of the logs of boring drilled as part of this study. The substation boring locations drilled as part of this study are superimposed on a geological map as shown on Figure 3, Substation Boring Locations on a Geologic Map, within Appendix A.

The Estrella Substation project site is found nestled in a valley between coastal mountain ranges of California. The northwest-trending mountains, and associated valleys, run subparallel to the San Andrea Fault. Mesozoic- to Cenozoic-aged sequences of sedimentary strata constitute many of the mountain ranges of California's Coastal Ranges, though the Salinian Block a predominantly granitic geologic terrane is also a significant part of the bedrock in the region. The valleys of the coastal ranges contain the eroded materials of local mountains.

To the north-northeast lies the Diablo Mountain Range, to the west of the project site the Santa Lucia Mountain Range, and to the south-southwest the San Luis Obispo Mountain Range. The project site lies within the Salinas River Valley. Local drainage systems cut across the valley drain into the Salinas River, which drains to the north into the Pacific Ocean. The project site sits atop the valleys sediments of the Paso Robles Formation, comprised of weakly indurated alluvial deposits eroded from local mountain ranges. The alluvial deposits mapped at the project site are of the quaternary period and consist of the following units:

- **Surficial Sediments** (Qa/g)**:** Alluvial sand and gravel, deposited by local river systems.
- **Paso Robles Formation** (QTp)**:** Valley sediments, weakly indurated, made up of pebbles, gravel, sand, silt and clay, gray to brown in color. Pebbles are predominantly comprised of sicliceous shale from the Monterey Shale.

3.2 Seismic Hazard

According to the USGS' database on faults active within the last 1.6 million years, there are two unnamed faults located approximately 2 miles southwest of the project site. Furthermore, the Rinconada section of the Rinconada fault zone is located west-southwest of the project site, along the western edge of the city of Paso Robles. The Rinconada fault zone, a significant part of the San Andreas fault system, is a right-lateral strike-slip fault, with an estimated slip rate between 2.4 mm per year to 12 mm per year. The most recent prehistoric seismic activity along this fault zone is reported to be between 50,000 and 100,000 years ago. Studies on the recurrence interval of earthquakes estimates an interval of 1,883 years, assumed a slip rate of 2.4 mm per year and the potential to produce a magnitude 7.6 earthquake.

Based on the above, the proposed Estrella substation project site may experience strong ground shaking caused by moderate to strong earthquake during the anticipated life expectancy of the planned project development. The potential for damage due to ground shaking can be

mitigated through proper design of the facilities and structures, as recommended in applicable building codes using seismic coefficients and design parameters recommended in this report.

3.3 Surface Fault Rupture

Ground surface rupture can occur along faults within the state of California. The California Department of Conservation maintains a database of the potential for ground ruptures along active faults, put into effect by the Alquist-Priolo (AP) Earthquake Fault Zoning Act of 1972. The Estrella substation project site is not located within an established AP Earthquake Fault Zone. Further evaluation of the ground surface rupture potential for the project site is therefore not required.

3.4 Soil Liquefaction

Sediment within the presence of groundwater can be a cause for caution in seismically active areas. Seismic waves can lead to an increase in water pressures within sediment and cause the sand grains to lose contact with one another, which in turn leads the sediment to behave like a liquid. This change in behavior can produce a significant loss of strength of the soil. Due to the lack of groundwater across the project site, the potential for liquefaction appears to be negligible.

3.5 Subsurface Stratigraphy

As shown on the Logs of Boring, native soils were encountered beneath approximately 8 to 12 inches of topsoil. The native soils extended the full depth of exploration of about 35 to 45 feet below existing site grade. Bedrock materials were not encountered to the full depth of the exploration. The native soils generally consisted of the following:

- Soft to hard lean clays with varying amounts of sand and gravel; and
- Very loose to very dense sand soils with varying amounts of clay, silt and gravel.

The above descriptions are general and depth ranges are approximate because boundaries between different strata are seldom clear and may be abrupt in the field. In addition, the lines separating major strata types on the Logs of Boring do not necessarily represent distinct lines of demarcation for the various strata. Detailed Logs of Borings included within Appendix A present the strata descriptions, types of sampling used, laboratory test data, and additional field data. The Boring Log Key, briefly defining the terms and descriptive symbols used on each log of boring, is also presented within Appendix A.

3.6 Groundwater Conditions

Groundwater was not encountered at the time of drilling and immediately after completion of the drilling operations. Upon completion of the drilling operations, the borings were backfilled in accordance with applicable state and local regulations; therefore, subsequent groundwater measurements are not available.

Based upon review of published well logs in San Luis Obispo County, California, available from the California Department of Water Resources (CDWR, Reference 3), near the project site, static groundwater levels were reported to be between 54 and 227 feet below the ground surface at well locations summarized in Table A1 within Appendix A. The shallowest groundwater level was recorded at about 54 feet below the ground surface at Well No. 355878N1206914W001 approximately 3.02 miles north of Boring B03. The well locations shown on Table A1 are plotted on Figure 4, Well Locations from the California Department of Water Resources, within Appendix A. It should be noted that the CDWR water wells were commonly installed to deep aquifers well below typical foundation depth and indicate piezometric or static groundwater level within those deep aquifers only. The static water levels from the deep CDWR wells often do not provide reliable groundwater information for shallow aquifers or perched water tables near foundation depths that should be considered in foundation design.

It is imperative to note that short-term field observations performed as part of this study generally do not permit for an accurate evaluation of groundwater levels at this and other sites, and should not be interpreted as a comprehensive groundwater study. The observations made during this investigation may not also represent conditions at the time of construction and it should be understood that the presence of groundwater might have effects on certain construction activities and long-term performance of foundations and/or pavements. Groundwater levels are highly dependent on climatic and hydrologic conditions before and after construction, and site development including irrigation demands, drainage and other factors. If a detailed groundwater study is desired, a groundwater hydrologist should be retained to perform these services.

4.0 LABORATORY TEST RESULTS

A modified Proctor test was performed to obtain the maximum dry unit weight and optimum moisture content in accordance with ASTM D1557 on a representative bulk clay soil sample from a cut location within the substation. Additional proctor tests will need to be completed during site grading when the onsite clay and sand soils are blended. A summary of test results is presented in Table 4.0.1.

Table 4.0.1 Summary of Modified Proctor Test Results

Sample Location	Depth (feet)	Material Type	Liquid Limit (%)	Plasticity Index (%)	Maximum Dry Unit Weight (pcf)	Optimum Moisture Content (%)
B11	1-4	CL	49	31	120.6	12.3

Notes: pcf = pounds per cubic foot; % = percent; CL = Lean Clay.

Results of direct shear tests under consolidated-drained conditions (DS) performed, in accordance with ASTM D3080, on remolded soil samples are summarized in Table 4.0.2.

Remolded sand soil samples were prepared by compacting disturbed SPT samples to match estimated in-situ total unit weight based on SPT N-values. The samples were remolded to their in-situ moisture content.

Table 4.0.2 Summary of Direct Shear Test Results

Sample Location	Depth (feet)	Material Type	Average Dry Unit Weight (pcf)	Average Moisture Content (%)	Effective Cohesion, c'_d (psf)	ϕ'_d (degree)
B01	7	SP-SM	115.9	5.8	187.2	40.2
B09	9	SC	113.6	11.9	144	42.9

Notes: pcf = pounds per cubic foot; % = percent; psi= pounds per square inch; SP = Poorly Graded Sand with Silt; SC = Clayey Sand.

Results of water-soluble sulfate and chloride testing are summarized in Table 4.0.3.

Table 4.0.3 Summary of Sulfate and Chloride Contents

Sample Location	Depth (feet)	Material Type	Sulfate Contents (percent by weight)	Chloride Contents (percent by weight)
B04	9	SM	0.013	0.002
B11	1 to 5	CL	0.002	0.001
B11	9	CL	0.004	0.002

Notes: SM = Silty Sand; CL = Lean Clay.

Results of Minimum Resistivity and pH testing are summarized in Table 4.0.4.

Table 4.0.4 Summary of Minimum Resistivity and pH Test Results

Sample Location	Depth (feet)	Material Type	Minimum Resistivity (ohm-cm)	pH
B09	7	SC	850	7.9
B11	4	CL	440	7.6

Notes: SC = Clayey Sand; CL = Lean Clay.

Graphical test results along with a summary of laboratory test results completed as part of this study are provided within Appendix B.

5.0 ELECTRICAL RESISTIVITY TEST RESULTS

Electrical resistivity surveys were performed at the substation location as shown on Figure 5, Electrical Resistivity Survey Locations Map, included within Appendix A. The survey was conducted utilizing a SuperSting R1/IP Ground Resistivity Tester using the Wenner 4-pin array method. The tests were performed using 2 perpendicular array arrangements at ‘a’ spacing ranging from 0.5 to 300 feet and 0.5 to 1,400 feet. The longer ‘a’ spacing of 0.5 to 1,400 feet was completed outside of the substation footprint due to site constraints. A second electrical resistivity test with an ‘a’ spacing of 0.5 to 300 feet was completed within the footprint of the substation. Electrical resistivity survey results are presented in Appendix C.

Interpretation of the field resistivity test results is beyond the scope of this study and should be performed by the design team.

6.0 FOUNDATION DESIGN AND GEOTECHNICAL RECOMMENDATIONS

The proposed substation site appears suitable for construction. The use of shallow foundation systems for support of lightly-loaded elements of the substation is considered acceptable. The use of drilled pier foundations for elements of the substation with heavy axial and overturning moments will be required.

Detailed foundation design and construction recommendations are presented below.

6.1 Shallow Foundation System

Based on the site grading plan for the proposed Estrella Substation prepared by ECI, we have anticipated approximate cut and fill depths up to 12.5 and 14 feet, respectively. We have further anticipated that suitable on-site clays and sand soils or borrow materials will be used in the fill sections within the substation area for site grading purposes.

Top soils and incompetent soil layers should be removed before placement of fill. Fill for site grading should be placed in lifts having a maximum loose lift thickness of 12 inches and should be compacted to a minimum of 90% of the maximum dry density as determined by ASTM D1557 or a minimum of 95% of ASTM D698, and within 2% of optimum moisture content. In areas where structural elements such as foundations and transformer pads are located within the fill zone, the fill below the foundations and pads should be compacted to a minimum of 95% of the maximum dry density of ASTM D1557 or a minimum 97% of ASTM D698, and moisture conditioned within 2% of optimum moisture content. Other requirements on the use of on-site and borrow materials, stockpile and placement are discussed in subsequent sections of this report.

Based upon review of the Logs of Boring and site grading plans, native lean clay and sand soils are anticipated to be encountered at shallow bearing elevations of the substation. The clay soils encountered at anticipated foundation bearing elevation are soft to hard in consistency and the sand soils are very loose to dense in relative density.

Soft clay soils and very loose sand soils were encountered in Borings B02 and B05 at approximate depths of 3 to 4 feet below existing grade. In order to improve foundation bearing capacity and to limit excessive settlement of foundation soils, we recommend soft clay soils and loose sand soils be partially removed to a minimum depth of 4 feet or to a competent layer, and then proof rolled prior to placing fill material above the existing grade. The removed materials may be re-compacted or replaced with on-site suitable materials or structural fill meeting the requirements outlined in a subsequent section of this report. The over-excavation could be terminated prior to reaching the recommended over-excavation depth provided suitable bearing conditions are uniformly exposed throughout the excavation.

Small lightly loaded structures may utilize spread footings or mat foundations when constructed directly on the native soils and compacted fill. Net allowable bearing pressures utilizing a factor of safety of 3 for continuous and square footing bearing on the native soils or compacted fill materials are outlined in Tables 6.1.1 and 6.1.2. Foundation footings should have a minimum embedment of 12 inches below existing site grade for confinement and frost protection (the anticipated frost penetration depth for the project site is about 12 inches based on information provided by San Luis Obispo County Building Department). Anticipated settlement of the foundations under service loads will be on the order of 1 inch or less when resting on native soils. Additional movement due to settlement of fill materials on the order of 1 percent of the fill height should also be taken into design consideration where foundation is built on compacted fill section.

For reinforced concrete slabs bearing at finished grade, we recommend over-excavation of foundation subgrade soils to a minimum depth of 1.0 foot below finished grade. The native soils should be replaced with non-frost susceptible fill material or flowable fill (Controlled Low Strength Material) with a compressive strength of at least 150 pounds per square inch (psi). The non-frost susceptible fill material should be compacted to a minimum of 95% of the maximum dry density as determined by ASTM D1557 or 97% of ASTM D698, and moisture conditioned within 2% of the optimum moisture content. A modulus of subgrade reaction of 100 pci can be used for designing reinforced concrete slabs bearing at finished grade provided the above design guidelines are followed.

For structural design of the footings and mat foundations, the parameters outlined in Tables 6.1.1 and 6.1.2 can be used.

Table 6.1.1 Soil Parameters for Structural Design of Footings and Pad Foundations Bearing on Native Clay Soils

Parameter	Design Value
Average Unit Weight (pcf)	115
Modulus of Subgrade Reaction (pci)	100*
Cohesion (psf) under undrained loading condition	1,500
Angle of Internal Friction (degree) under drained loading condition	20
Friction Coefficient at Foundation Base	0.35
**Allowable bearing pressure for Strip or Continuous Footings (psf)	3,000
**Allowable bearing pressure for Square or Pad Footings (psf)	3,000

* For a 1 ft. x 1 ft. Plate. ** Allowable bearing pressure utilizes a factor of safety of 3.

Table 6.1.2 Soil Parameters for Structural Design of Footings and Pad Foundations Bearing on Native Sand Soils and Compacted Fill

Parameter	Design Value		
	Foundation Width, B > 1 ft.	**Foundation Width, B > 2 ft.**	**Foundation Width, B > 3 ft.**
Average Unit Weight (pcf)	115	115	115
Modulus of Subgrade Reaction (pci)	100*	100*	100*
Cohesion (psf) under undrained loading condition	0	0	0
Angle of Internal Friction (degree) under drained loading condition	33	33	33
Friction Coefficient at Foundation Base	0.40	0.40	0.40
**Allowable bearing pressure for Strip or Continuous Footings (psf)	1,800	2,400	3,000
**Allowable bearing pressure for Square or Pad Footings (psf)	2,300	2,600	3,000

* For a 1 ft. x 1 ft. Plate. ** Allowable bearing pressure utilizes a factor of safety of 3.

Proper drainage must be maintained during construction and throughout the life of the structures to provide for improved shallow foundation performance. Other design and construction recommendations as outlined in the ACI design Manual should be followed.

6.2 Deep Foundation System

Substation elements with heavy axial loads and/or large overturning moments may utilize drilled pier foundations. Pier lengths will likely be dictated by overturning resistance and should be determined by the structural engineer.

Summary of ultimate end bearing, skin friction, and pullout skin friction values for each boring drilled within the substation are included in Tables D1.2, D2.2, D3.2, D4.2, D5.2, D6.2, D7.2, D8.2, D9.2, D10.2 and D11.2 within Appendix D. Allowable end bearing pressures and skin frictions utilize a factor of safety of 3 and 2, respectively. We recommend the drilled shaft end bearing capacity be neglected unless adequate measures are taken during construction to remove any disturbed soils from the shaft base and only undisturbed soils are exposed.

For pull-out or uplift resistance, the skin friction values outlined above should be reduced by 25%. Total uplift resistance can be calculated by combining the dead load and pier skin friction below a depth of 3 feet. The actual length of the drilled pier should be determined by the structural engineer to satisfy both axial and lateral loading conditions. Deep foundation system within fill sections shall be designed for drag load and down-drag settlement.

Settlement associated with drilled piers is anticipated to be on the order of about ½ to 1 inch. Piers should have a minimum diameter of 18 inches. It is imperative that the final design provide for proper drainage around structures during construction and throughout the life of the structure.

Lateral load analysis may be performed using the LPILE computer program. LPILE uses a p-y curve finite difference technique for predicting the soil-structure interaction and response. Based on our interpretation of the subsurface strata and the results of the field and laboratory tests, the parameters outlined in Tables D1.1, D2.1, D3.1, D4.1, D5.1, D6.1, D7.1, D8.1, D9.1, D10.1 and D11.1 included in Appendix D may be used to evaluate drilled piers under lateral loads.

Vertical steel reinforcement to resist tensile loads caused by uplift forces should extend the full length of the pier shaft. Additional reinforcement required by structural demands for axial compressive loads, lateral loads, or minimum reinforcement required by design codes should be satisfied. To maintain the integrity of the piers and reduce excessive stress overlap from adjacent foundations, the minimum center-to-center spacing between adjacent piers should be at least 3 times the diameter of the larger piers, and the minimum allowable edge-to-edge spacing between adjacent piers should not be less than 3 feet.

6.3 Lateral Earth Pressures

Lateral earth pressures will apply in strata where soils are the main constituent. The structure will be designed to resist all lateral movements; therefore, the "at rest" lateral earth pressure will develop.

Where the design includes restrained elements, the following "at rest" equivalent fluid pressures are recommended as shown in Table 6.3.1:

Table 6.3.1 Recommended Equivalent Fluid Pressures for "At Rest" Lateral Earth Pressures

Material Type	"At Rest" Coefficient of Lateral Earth Pressure	Equivalent Fluid Pressure for "At Rest" Lateral Earth Pressure (psf/ft.)
Clay Soils above Groundwater	0.60	70
Sand Soils above Groundwater	0.45	55
Structure Fill above Groundwater	0.45	60

Passive and active earth pressure resistance will only mobilize after significant movement of the foundation. The passive case occurs where a structural element tends to move into the soil mass. The active case occurs when the element tends to move away from the soil mass. Both cases are applicable for unrestrained foundation elements.

For soils above any free water surface, recommended equivalent fluid pressures for unrestrained foundation elements when using on-site soils as backfill are shown on Table 6.3.2 and Table 6.3.3 for active and passive lateral earth pressures, respectively:

Table 6.3.2 Recommended Equivalent Fluid Pressures for Active Lateral Earth Pressures

Material Type	Active Coefficient of Lateral Earth Pressure	Equivalent Fluid Pressure for Active Lateral Earth Pressure(psf/ft.)
Clay Soils above Groundwater	0.45	50
Sand Soils above Groundwater	0.30	35
Structure Fill above Groundwater	0.25	35

Table 6.3.3 Recommended Equivalent Fluid Pressures for Passive Lateral Earth Pressures

Material Type	Passive Coefficient of Lateral Earth Pressure	Equivalent Fluid Pressure for Passive Lateral Earth Pressure (psf/ft.)
Clay Soils above Groundwater	2.30	265
Sand Soils above Groundwater	3.25	375
Structure Fill above Groundwater	3.70	500

The equivalent pressures listed above are based on an average total unit weight of 115 pcf for on-site clays and sands and 135 pcf for structural fill materials. For soils below the free water surface, hydrostatic pressure should be added to the lateral earth pressure, and the equivalent fluid pressures should be calculated using the effective unit weights (the above total unit weight minus 62.4 pcf) multiplied by the appropriate earth pressure coefficient (Ko, Ka, & Kp). The above earth pressure values do not include safety factors. We recommend a minimum safety factor of 2.0 be applied when using passive earth pressure for lateral load resistance. Surcharge loads should also be considered where appropriate. The values apply only to cases where the ground surface is level. We should be contacted to provide suitable values for cases where the ground surface is sloped.

6.4 Slope Stability Analysis

Based on review of the site grade plan prepared by ECI dated December 23, 2015 cut and fill sections up to 12.5 feet to 14 feet, respectively are anticipated. Typical cut and fill sections have slopes of 1V:3H (vertical:horizontal). The slope/W program was used to evaluate the stability of cut and fill slopes using Spencer's method under static load conditions. The analyses does not include seismic (pseudostatic) case.

We have assumed that suitable on-site clay and sand soils or borrow materials will be used in the fill sections within the substation area for site grading purposes and will be placed in general accordance with recommendations outlined in subsequent sections of the report. Table 6.4.1 outlines the parameters used in the slope stability analyses.

Table 6.4.1 Parameters

Material Type	Effective Friction Angle, ϕ' (degree)	Effective Cohesion, c' (psf)	Total Unit Weight (pcf)
Compacted Sand Fill (90% of D1557)	33°	0	120
Sandy Lean Clay	22°	300	115

Material Type	Effective Friction Angle, ϕ' (degree)	Effective Cohesion, c' (psf)	Total Unit Weight (pcf)
Lean Clay	18°	300	115
Clayey Sand, Silty Sand	28°	0	115

The minimum accepted safety factor for slope stability varies depending on location. For cut slopes, we chose a minimum static safety factor 1.3, consistent with FHWA and USCOE criteria. The minimum value of 1.3 considers that the foundations are set back well away from the cut slope face and the consequence of a slope failure upon the foundations is not severe.

For natural and fill section downslope of the substation, we chose a higher static safety factor of 1.5 as the minimum accepted value for slope stability. This higher value was chosen since the consequence of a slope failure below the foundations is more severe.

The slope stability analyses result for typical cut and fill sections shows that typical cut sections have a factor of safety of 1.6 and typical fill sections have a factor of safety of 1.9 or higher.

The slope stability analyses did not consider groundwater, since it was not encountered in our field exploration. However, proper drainage is essential to the long-term stability of the foundations and natural/proposed slopes, and it is imperative that proper drainage be provided away from the substation foundation elements during all phases of construction and post-construction grading. Ponding of water within the foundation pads or along the natural/proposed slopes should not be permitted.

6.5 Seismic Considerations

For structural designs based upon the 2013 California Building Code (CBC) which in turn refers to the 2012 International Building Code (IBC) (Reference 4), a Site Class D can be used for the project site. The Mapped Spectral Response Acceleration for the 1 second (S_1) and short periods (S_S) were computed using the U.S. Seismic Design Maps web-based application program developed by the United States Geological Survey (USGS) (Reference 5). Table 6.5.1 summarizes recommended seismic parameters to be used in the design:

Table 6.5.1 Recommended Seismic Parameters

Parameter	Recommended Calculated Value
S_S – Mapped Spectral Response Acceleration at Short Period (0.2-Second)	1.421 g
S_1 – Mapped Spectral Response Acceleration at 1-Second Period	0.519 g
F_a (Site Coefficient) – Site Class D	1.0
F_v (Site Coefficient) – Site Class D	1.5

7.0 FOUNDATION CONSTRUCTION CRITERIA

7.1 Site Preparation

Prior to construction, we recommend proper and positive drainage be provided to maintain a relatively dry condition in the area of proposed construction. This will be very important if any work is attempted during periods of prolonged rainfall. Ponding of water in the areas of construction should be avoided. Winter conditions can also impact the construction process. Newly placed fill should not be placed on frozen subgrade and frozen material should not be used for fill.

Site preparation should begin by removing surface vegetation, soil, and major root systems within the foundation areas. Deleterious materials should be placed in non-structural areas or removed from the site. During excavation of the foundations, every effort should be made to avoid disturbing the subgrade materials at the planned foundation bearing elevation. When the subgrade is disturbed, the resulting surface should be re-compacted to achieve a minimum 95% compaction of the maximum dry density of ASTM D1557 and within 2% of the optimum moisture content. In areas where densification of the subgrade materials is required, proper slopes meeting to OSHA, federal, and state requirements should be maintained. The base of each foundation excavation should be observed by a professional geotechnical engineer or his/her representative prior to foundation installation.

7.2 On-Site Excavated Materials as Foundation Backfill and Fill for Site Grading

The use of on-site native clay and sand soils free of organics is considered acceptable as backfill against foundations and within trenches, as well as fill material for site grading, provided the materials are properly processed and placed. Excavated material may be stockpiled for later use as foundation backfill, fill for site grading or structural backfill. These materials should be free of organics, roots, and deleterious materials before the stockpile is allowed for reuse. The fill materials should be placed in thin, loose lifts not exceeding 12 inches prior to compacting. Each material lift should be compacted and moisture conditioned properly.

Foundation backfill and fill for site grading should be compacted to a minimum of 90% of the maximum dry density as determined by ASTM D1557 and within 2% of the optimum moisture content. If structural elements are supported on compacted fill, the fill below the structural elements should be compacted to a minimum of 95% of the maximum dry density per ASTM D1557 and moisture conditioned within 2% of optimum moisture content. Placement of fill material for site grading should follow the recommendations presented in Section 6.1 of this report.

For site grading and earthwork quantity estimate purposes, as guidance, the following shrink or swell factors may be assumed for compacted fill, provided the soils are properly processed and compacted following the recommendations in this report.

Soil Type	Estimated Shrink (-) Swell (+)
On-site Clay	-15 to +5%
On-site Sand	-10 to +5%

7.3 Structural Fill Specifications

On-site clay and sands may be used beneath foundations where over-excavation and replacement of unsuitable materials is performed.

Structural fill material should consist of a non-expansive, well-graded material with sufficient binder for compaction purposes. Locally available crushed rock meeting the specifications of California Department of Transportation (CalTrans) Aggregate Base Class 2 or better may be used. If other materials are to be considered, they should conform to the following general specification:

Sieve Size	Percent Passing
1½"	100
1"	80-00
¾"	70-90
½"	55-80
No. 4 Sieve	35-60
No. 30 Sieve	12-30
No. 200 Sieve	5-10

- Liquid Limit ..... 40 (max)
- Plastic Index ..... 12 (max)

Structural fill should be placed in lifts having a maximum loose lift thickness of 8 inches and should be compacted to a minimum of 95% of ASTM D1557. The structural fill should be moisture conditioned within 2% of optimum moisture content.

7.4 Shallow Foundation Construction

The following construction criteria and general guidance should be observed during shallow foundation construction:

1. All foundation excavations should be observed by a professional geotechnical engineer or his/her representative to assess proper bearing materials are observed at foundation bearing elevation in accordance with the recommendations given herein, and to assess the need for densification of the subgrade materials.
2. Special care should be taken to protect the exposed soils from being disturbed, freezing or drying out prior to placement of the structural fill pad.
3. Excavation should be accomplished with conventional excavation equipment to the foundation bearing elevation. The foundation excavation should be sloped sufficiently to create internal sumps for runoff collection and removal. If surface runoff water or

groundwater seepage accumulates at the bottom of the foundation excavation, it should be collected and removed and not allowed to adversely affect the quality of the bearing surface.

4. The foundation excavation should be checked for size and cleaned of loose material and debris prior to the placement of reinforcing steel. Precautions should be taken during the placement of reinforcement and concrete to prevent loose excavated material from falling into the excavation.
5. Prior to the placement of concrete, water or frozen ground if present must be removed from the foundation excavation.

7.5 Drilled Pier Construction

The following items are important for the successful completion of drilled pier foundations:

1. A professional geotechnical engineer or his/her representative should observe all pier excavations. Pier construction observations are recommended to observe proper depth, bearing stratum and to record other observations regarding pier construction.
2. Pier excavations should be checked for size, and to determine all loose material and free water has been removed prior to the placement of concrete. Precautions should be taken during the placement of the pier reinforcement and concrete to prevent loose excavated material from falling into the excavation.
3. Prompt placement of concrete in the excavation as it is completed, cleaned, and inspected is strongly recommended. Under no circumstances should a pier shaft be drilled that cannot be filled with concrete before the end of the workday.
4. The reinforcement steel cage placed in the shaft should be designed to be stable and centered during the placement of concrete.
5. The use of temporary steel casing may be required in areas where drilled shafts extend into cohesionless sand soil. The drilling contractor should be prepared to provide means and methods to properly construct drilled pier shafts.
6. Pier concrete placement while using temporary steel casing shall be placed with a pumper and tremie pipe. Concrete shall be placed with the tremie pipe starting from the bottom of the pier. The tremie pipe and steel casing shall be withdrawn in a slow manner to maintain a sufficient amount of concrete within the pier to displace water and soil intrusion from allowing proper pier construction.
7. Means and methods for drilled pier construction of drilled pier shall be the responsibility of the design build contractor.

7.6 Open Excavations

Temporary construction slopes and/or permanent embankment slopes should be protected from surface runoff water. Site grading should be designed to allow drainage at planned areas where erosion protection is provided, instead of allowing surface water to flow down unprotected slopes. Surcharge loads, either static or dynamic, should not be applied to an excavation slope. Construction equipment should be prevented from traveling along or near the top of the excavation slope. Monitoring of temporary slopes, trenches, and dewatering during construction

should be undertaken by the contractor to detect early warnings of movement within slopes, structures, pavements, etc.

In all cases of excavations, sloped excavations and trench shields are recommended for excavations greater than 4 feet in depth. OSHA and applicable state and local standards should be observed and followed. Site safety is the responsibility of the contractor.

7.7 Corrosivity

Water-soluble sulfate and chloride testing results, shown in Section 4.0 of this report, indicated the surficial soils exhibit "Negligible" sulfate contents. The use of Type I cement should be considered for all at grade and below grade concrete. However, if there is minimal cost differential, the use of Type II cement could be considered for higher sulfate resistance. Foundation concrete should be designed in accordance with Chapter 4 of Section 318 of the ACI Design Manual.

Minimum resistivity and pH testing results, shown in Section 4.0 of this report, indicated the surficial soils exhibit "Very Corrosive" to "Corrosive" characteristics. Cathodic protection for buried metal pipe should be designed by a qualified corrosion engineer, if required.

Table 7.7.1 Effect of Resistivity on Corrosion (Reference 6)

Aggressiveness	Resistivity in ohm-cm
Very Corrosive	< 700
Corrosive	700 – 2,000
Moderately Corrosive	2,000 – 5,000
Mildly Corrosive	5,000 – 10,000
Non-Corrosive	> 10,000

7.8 Drainage

Proper drainage should be provided away from the foundation elements during all phases of construction and post-construction grading. Proper drainage is essential to the long-term stability of the structure. Ponding of water near the foundation elements from improper drainage should not be permitted.

8.0 ACCESS ROADWAYS AND CONSTRUCTION RECOMMENDATIONS

It is our understanding private access roadways surfaced with aggregate base course materials will be built for construction and maintenance purposes. Traffic volumes during construction are anticipated to be frequent with heavy equipment utilizing the roadways. Following the construction period, the traffic volumes will be light and vehicles using the roadways will generally consist of pickup trucks and occasional single and multi- unit trucks. The aggregate base course section thickness design is based upon the methodology outlined by the American

Association of State Highways and Transportation Officials (AASHTO) for design of aggregate-surfaced roadways (Reference 7).

The surficial materials encountered within the borings consisted of lean clay and sand soils with some organic content. These materials are generally considered to be poor to fair in terms of supporting vehicular and construction traffic when used for support of pavement structures as defined by AASHTO. For design purposes, a CBR value of 3 percent will be used for the onsite clay soils.

The following sections provide a summary of design recommendations for aggregate base course surfaced roadways utilizing the 1993 AASHTO Design Manual.

8.1 Aggregate Base Course Thickness Recommendations

The AASHTO design chart for aggregate-surfaced roads considering allowable rutting (Figure 4.3 in the 1993 Design Manual) was utilized in calculating the aggregate base course thickness. Assumed traffic utilizing 18-kip Equivalent Single-Axle Loads (ESAL) were estimated based upon our experience with similar developments. A summary of the design parameters used is presented in Table 8.1.1.

Table 8.1.1 Summary of Design Parameters

Parameter	Design Value
ESAL for Access Roadways	3,500
Modulus of Aggregate Base Layer (E_{BS}) in psi	30,000
CBR Design Value of Subgrade Materials (%)	3.0
Calculated Modulus of Roadbed Materials (M_R) in psi	4,500
Allowable Rutting Design Value in inches	1.5

Resulting recommended aggregate base course thickness design based upon the parameters included in Table 8.1.1 are summarized in Table 8.1.2.

Table 8.1.2 Summary of Aggregate Base Course Materials-AASHTO Charts

Roadway Segment	Allowable Rutting (inches)	Aggregate Base Course Thickness (inches)
Access Roadways	1.5	5.5

Note: [(1)]Although the AASHTO pavement design procedure indicates an aggregate base course thickness less than 6 inches for the anticipated ESAL traffic load, consideration should be given to using a minimum 6 inches of aggregate base course during construction to account for potential aggregate degradation/loss.

To reduce the potential of the aggregate base penetrating into the subgrade clays and intrusion of subgrade soils into the aggregate base course, consideration can be given to placing a layer

of geotextile fabric underneath the base course, as a separation between the aggregate base and the clay subgrade. The geotextile should be Class 1 or Class 2 in accordance with AASHTO Material Specification M288.

Prior to the placement of the aggregate base materials along roadway alignments, stripping and removal of existing vegetation and other deleterious materials from proposed roadway alignments should be performed. Topsoil and organics could be up to about 12 inches or more in thickness in some areas and should not be allowed for use in structural areas or along roadway alignments. The subgrade along access roadways should be scarified to a minimum depth of 12 inches; moisture conditioned within 2 percent of the optimum moisture content and re-compacted to a minimum of 95% of the maximum dry density as determined in accordance with ASTM D1557. The exposed subgrade should then be proof-rolled prior to the placement of the aggregate base course materials to assess the presence of soft areas and the need for remedial measures, if any. In areas where excessive "pumping" of the subgrade is observed, consideration should be given to placing geogrid (Tensar Biaxial Type 2 or equivalent) on top of geotextile (Mirafi HP 570 or equivalent) above the exposed subgrade soils, otherwise removal of unsuitable soils in these areas and re-compaction and/or replacement with granular soils will be required. Aggregate base materials should be compacted to a minimum of 95% of ASTM D1557 or a minimum of 97% of ASTM D698 and within 2% of the optimum moisture content.

9.0 LIMITATIONS

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is likely soil conditions will vary between or beyond the points explored. If soil conditions are encountered during construction that differ from those described herein, we should be notified immediately in order to provide supplemental recommendations (if needed). If the scope of the proposed construction, including structural locations, changes from those described in this report, our data should also be reviewed.

We have prepared this report in substantial accordance with the generally accepted geotechnical engineering practice as it exists in the site area at the time of our study. No warranty is expressed or implied. The recommendations provided in this report are based on the assumption that a professional geotechnical engineer or his/her representative will conduct an adequate program of tests and observations during the construction phase in order to evaluate compliance with our recommendations.

This report may be used only by the client and only for the purposes stated, within three years from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party other than the client, or the client's design team members for this particular project, who wishes to use this report, shall notify RRC of such intended use. Based on the intended use of the report, RRC may require that additional work be performed and that an updated report be

issued. Non-compliance with any of these requirements by the client or anyone else will release RRC from any liability resulting from the use of this report by any unauthorized party.

Other standards or documents referenced in any given standard cited in this report, or otherwise relied upon by the authors of this report, are only mentioned in the given standard; they are not incorporated into it or "included by reference," as that latter term is used relative to contracts or other matters of law.

DEGREE OF WEATHERING

1) Unweathered: No evidence of any chemical or mechanical alteration.
2) Slightly weathered: Slight discoloration on surface, slight alteration along discontinuities, less than 10% of the rock volume altered.
3) Moderately weathered: Discoloring evident, surface pitted and altered with alteration penetrating well below rock surfaces, weathering "halos" evident, 10% to 50% of the rock volume altered.
4) Highly weathered: Entire mass discolored, alteration pervading nearly all of the rock with some pockets of slightly weathered rock noticeable, some minerals leached away.
5) Decomposed: rock reduced to a soil with relicit rock texture, generally molded and crumbled by hand.

SOIL STRUCTURE

Calcareous..... Containing calcium carbonate

Slickensided..... The presence of planes of weakness having a slick and glossy appearance

Interbedded..... Alternating layers of varying material

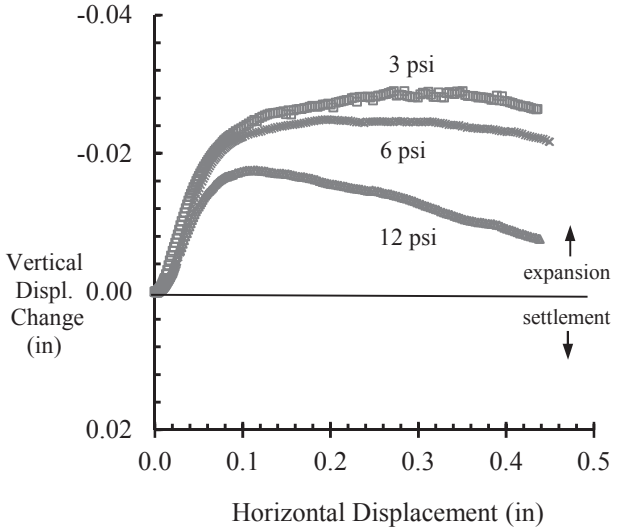
Direct Shear of Soil Under Consolidated-Drained Conditions



Client: NextEra Energy Transmission West LLC
Project: Estrella Substation Project
Specimen: B-01 at 7 ft

RRC Project No.: GE1603002
Test Method: ASTM D3080
Test Date: 05/03/16

Note: Area Correction Has Been Applied

Sample Number		1	2	3
Initial Condition	Diameter, in	2.50	2.50	2.50
	Height, in (before consol)	1.09	1.06	1.07
	Water Content, %	5.9	5.8	5.7
	Saturation, %	33.4	36.1	34.2
	Total Unit Weight, pcf	121.0	124.1	122.9
	Void Ratio	0.47	0.44	0.45
Post Consol	Height, in (prior to shear)	1.08	1.05	1.05
	Final Water Content, %	16.0	15.3	15.0
	Dry Unit Weight, pcf	114.6	118.2	117.9
	Void Ratio	0.47	0.43	0.43
Peak Normal Stress, σ' (psi)		3.1	6.1	12.3
Peak Shear Stress, τ (psi)		3.2	7.6	11.4
Displacement at Failure (in)		0.02	0.03	0.03
Displacement rate (in/min)		0.0005	0.0005	0.0005
Sample Type	Remolded	ϕ'_d, degrees		**40.2**
G_s (assumed)	2.70	c'_d, psi		**1.3**

Note: Specimens remolded to a total unit weight of 124 pcf at as-receive water content.

Olga Vasquez, 05/06/16
Analysis & Quality Review/Date
Specimens prepared by: T.D.

The results shown on this report are for the exclusive use of the client for whom they were obtained and apply only to the sample tested and / or inspected. They are not intended to be indicative of qualities of apparently identical products. The use of our name must recieve prior written approval. Reports must be reproduced in their entirety. Unauthorized use or copying of this document is strictly prohibited by anyone other than the client for the specific project.

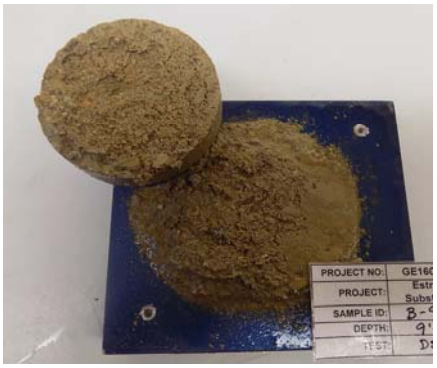
	Total Unit Weight, pcf	126.1	128.8	126.6
	Void Ratio	0.49	0.47	0.49
Post Consol	Height, in (prior to shear)	1.10	1.05	1.08
	Final Water Content, %	19.9	19.4	18.8
	Dry Unit Weight, pcf	112.0	115.8	114.1
	Void Ratio	0.51	0.46	0.48
Peak Normal Stress, σ' (psi)		4.1	10.3	16.2
Peak Shear Stress, τ (psi)		5.1	9.5	16.4
Displacement at Failure (in)		0.03	0.03	0.03
Displacement rate (in/min)		0.0003	0.0003	0.0003
Sample Type	Remolded	ϕ'_d, degrees		**42.9**
G_s (assumed)	2.70	c'_d, psi		**0.9**

Note: Specimens remolded to a total unit weight of 124 pcf at as-receive water content.

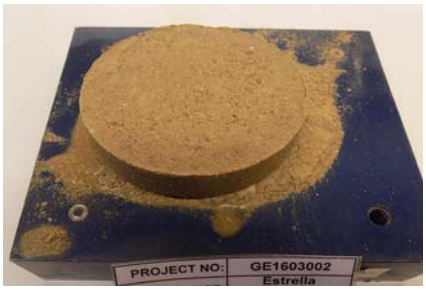
Olga Vasquez, 05/06/16
Analysis & Quality Review/Date
Specimens prepared by: T.D.

The results shown on this report are for the exclusive use of the client for whom they were obtained and apply only to the sample tested and / or inspected. They are not intended to be indicative of qualities of apparently identical products. The use of our name must recieve prior written approval. Reports must be reproduced in their entirety. Unauthorized use or copying of this document is strictly prohibited by anyone other than the client for the specific project.



3801 Doris Lane
Round Rock, TX 78664
Phone: (512) 992-2087

Direct Shear of Soil Appendix



Client: NextEra Energy Transmission West LLC
Project: Estrella Substation Project
Specimen: B-09 at 9 ft

RRC Project No.: GE1603002
Test Method: ASTM D3080
Test Date: 05/03/16

(a) Normal Load = 4 psi

(b) Normal Load = 8 psi

(c) Normal Load = 16 psi

The results shown on this report are for the exclusive use of the client for whom they were obtained and apply only to the sample tested and / or inspected. They are not intended to be indicative of qualities of apparently identical products. The use of our name must recieve prior written approval. Reports must be reproduced in their entirety. Unauthorized use or copying of this document is strictly prohibited by anyone other than the client for the specific project.

Exhibit C
SOIL RESISTIVITY DATA

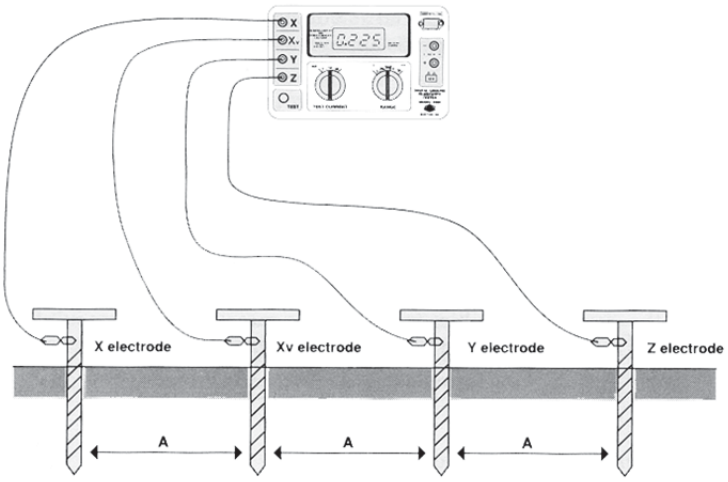
Traverse : East - West
(Wenner Array)

Site Data:

Location: Estrella Substation 300-Ft Traverse (35.6369084, -120.6000346)

Date: April 11, 2016

Weather (recent days): 58°F Cloudy



Brief Description of Terrain: Sandy Lean Clay (CL), light brown, moist.

Further Remarks: 230 kV overhead transmission line exists approximately 510 feet east of test location. 500 kV overhead transmission line exists approximately 180 feet northwest of test location.

Instrument model and SN: SuperSting R1-IP Resistivity meter. S/N: SP0803249

Date of calibration: October 15, 2015

Test Configuration:

$\rho = 1.92 \times R \times A$
A = distance between electrodes in feet
R = Ω reading obtained
ρ = resistivity in Ω * meter

X = C1
X_y = P1
Y = P2
Z = C2

Geotechnical Investigation Report
Paso Robles – Estrella Transmission Line, Union Road Route
San Luis Obispo County, California

PG&E Job Order No. 74000924
Operation Code 2450

Dear Mr. Hopkins:

Kleinfelder is pleased to present the attached geotechnical investigation report for the proposed Pacific Gas and Electric Company Paso Robles - Estrella Transmission Line Project. The purpose of our investigation was to explore and evaluate the geologic and subsurface conditions along the "Union Road" route of the proposed transmission line alignment in order to develop geotechnical engineering recommendations for project design, specification development, and construction.

Kleinfelder appreciates the opportunity to provide geotechnical engineering services to Pacific Gas and Electric Company. Kleinfelder trusts this information meets your current needs. If there are any questions concerning the information presented in this report, please contact this office at your convenience.

Sincerely,

KLEINFELDER, INC.

1. INTRODUCTION

1.1 GENERAL

This report presents the results of Kleinfelder's geotechnical investigation for the Paso Robles-Estrella Transmission Line project located in San Luis Obispo County, California. A Site Vicinity Map of the project alignment alternatives is provided on Figure 1.

The conclusions and recommendations presented in this report are based on the site reconnaissance and subsurface investigation program performed for this study. The geologic surface and subsurface conditions encountered were analyzed along with the results of laboratory testing in order to develop conclusions and recommendations for project design, specification development, and construction. The provisions and requirements outlined in the Limitations section of this report are also an integral part of the development of our conclusions and recommendations. The conclusions and recommendations presented herein should not be extrapolated to other areas or used for other projects without our participation.

1.2 PROJECT DESCRIPTION

It is understood that Pacific Gas and Electric Company (PG&E) proposes to construct a new 70-kV transmission line to connect the San Miguel-Paso Robles 70-kV transmission line to the Estrella substation. The new poles are expected to be tubular steel poles (TSP's) supported on drilled pier foundations, although some of the tangent poles may be directly embedded into the foundation soils without a concrete foundation. New angle poles and dead-ends will be TSPs founded on reinforced drilled pier foundations.

The power line consists of a new, approximately 7-mile-long 70 kV power line between Estrella Substation and an existing 70 kV power line and the reconductoring of approximately 3 miles of the existing line from the point of connection to Paso Robles Substation.

The Union Road route of the new 70 kV power line segment will travel southwesterly from Estrella Substation, spanning over vineyards, cross under and paralleling an existing 230 kV and 500 kV transmission lines for approximately 0.5 mile. North of Union Road, the new line turns westerly and joins an existing 12 kV overhead distribution line, which becomes an underbuild on the new

© 2017 Kleinfelder

structures. The new line follows existing distribution lines for about 2.5 miles, extending through vineyards and large residential properties on the north side of Union Road and then turning northwesterly and crossing Huerhuero Creek and continuing along the north side of Union Road.

Near the Paso Robles Sports Club, the Union Road route leaves the existing distribution alignment and crosses to the southwesterly side of Union Road. The new line continues in a northwesterly direction, crossing SR-46 and then generally travels westerly for approximately 0.5 mile to Golden Hill Road. At Golden Hill Road, the route will head northerly along the Golden Hill Road alignment for approximately 1 mile and adjacent to the existing light industrial uses to the east and existing residences to the west. The new line then continues generally westerly for approximately 1.5 miles and then southwesterly for 0.5 mile to River Road, adjacent to existing residences, vineyards, and other agricultural uses. At River Road, the new 70 kV power line segment will interconnect with the existing San Miguel-Paso Robles 70 kV power lineThe alignment is illustrated on Figure 2.

1.3 SCOPE OF SERVICES

The purposes of our investigation were to explore and evaluate the subsurface conditions along the project alignment, and to provide geotechnical recommendations for pole foundation design and construction. To accomplish these purposes, we developed a scope of services that included the following:

- A field exploration program consisting of drilling, sampling and logging of six exploratory borings on the Union Road alignment
- Laboratory testing to evaluate relevant geotechnical engineering parameters of the subsurface soils including corrosion potential
- Engineering analysis of the data gathered
- Preparation of this report which includes:
    - A summary of the field exploration and laboratory test data
    - Comments on the corrosion potential of foundation soil
    - California Building Code (CBC) seismic design parameters for use in structural analysis
    - Liquefaction and seismic settlement analysis and discussion

© 2017 Kleinfelder

- Geotechnical design parameters for use in lateral response analyses to be conducted by others
- Axial capacity analyses for drilled pier foundations of a unit diameter
- Recommendations related to the geotechnical aspects of temporary pier foundation excavations and shoring and temporary dewatering systems
- Logs of borings and laboratory test results

Environmental evaluations are outside the scope of this study. Although a subcontract analytical laboratory conducted analyses to assess parameters for evaluation of corrosion of buried steel and deterioration of buried concrete, Kleinfelder's scope of work did not include corrosion engineering. Therefore, assessment of the potential for corrosion of buried steel and deterioration of buried concrete should be performed by qualified professionals.

© 2017 Kleinfelder

2. FIELD EXPLORATION AND LABORATORY TESTING

2.1 FIELD EXPLORATION

2.1.1 Exploratory Borings

On August 11 through October 13, 2016, a total of six borings were drilled along the Union Road route to depths of about 31½ feet below the existing ground surface. The borings were drilled with various truck-mounted drill rigs using hollow-stem auger and mud rotary techniques. The approximate boring locations are shown on Figure 2, Boring Location Map. Note that Figure 2 indicates one boring location (U-2) that was planned but ultimately not drilled due to site access constraints at the time of our field exploration.

Prior to subsurface exploration, Underground Service Alert (USA) was contacted to provide utility clearance in the public right-of-way. In addition, the borings were cleared to a depth of approximately 5 feet using hand auger methods to confirm the absence of buried conflicts. A site-specific health and safety plan was prepared for the field exploration activities. This plan was discussed with the field crew prior to the start of field exploration work.

A Kleinfelder professional maintained logs of the borings, visually classified the soils encountered according to the Unified Soil Classification System presented on Figure A-1 in Appendix A, and obtained samples of the subsurface materials. Soil classifications made in the field from samples and auger cuttings were in accordance with American Society for Testing and Materials (ASTM) Method D2488. These classifications were re-evaluated in the laboratory after further examination and testing in accordance with ASTM D2487. The undrained shear strengths of cohesive samples were estimated in the field using a hand-held penetrometer device. Sample classifications, blow counts recorded during sampling, and other related information were recorded on the boring logs. The blow counts listed on the boring logs have not been corrected for the effects of overburden pressure, rod length, sampler size, or hammer efficiency. Correction factors were applied to the raw sampler blow counts to estimate the sample apparent density noted on the boring logs and for engineering analyses. At completion of drilling, the borings were backfilled with neat cement grout. Fluid and soil cuttings were stored in 55-gallon drums for subsequent testing and disposal by our subcontractor.

© 2017 Kleinfelder

Keys to the soil descriptions and symbols used on the boring logs are presented on Figures A-1 and A-2 in Appendix A. Logs of the borings are presented on Figures A-3 through A-8.

2.1.2 Sampling Procedures

Soil samples were collected from the borings at depth intervals of approximately 5 feet. Samples were collected from the borings at selected depths by driving either a 2.5-inch inside diameter (I.D.) California sampler, or a 1.4-inch I.D. Standard Penetration Test (SPT) sampler driven 18 inches (unless otherwise noted) into undisturbed soil. The samplers were driven using a 140-pound automatic hammer free-falling a distance of 30 inches. Blow counts were recorded at 6 inch intervals for each sample attempt and are reported on the logs.

The SPT sampler did not contain liners. The 2.5-inch I.D. California sampler contained brass liners. The California sampler was in general conformance with American Society of Testing Materials (ASTM) D3550. The Standard Penetration Test (SPT) sampler was in accordance with ASTM D1586.

Soil samples obtained from the borings were packaged and sealed in the field to reduce moisture loss and disturbance. Following drilling, the samples were returned to our laboratory for further examination and testing.

2.2 LABORATORY TESTING

Kleinfelder performed laboratory tests on selected samples recovered from the borings to evaluate their physical and engineering characteristics. The following laboratory tests were performed:

- Unit Weight (ASTM D2937)
- Moisture Content (ASTM D2216)
- Percent Passing the No. 200 Sieve (ASTM D1140)
- Grain Size Analysis (ASTM D422)
- Atterberg Limits (ASTM D4318)
- Corrosion – Soluble Sulfate Content (ASTM D4327)
- Corrosion – Soluble Chloride Content (ASTM D4327)
- pH and Minimum Resistivity (ASTM D4972 and ASTM G57, respectively)

© 2017 Kleinfelder

Test specimens for unit weight and moisture content tests consisted of 2.5-inch I.D. samples. The results of most of the laboratory tests are summarized on the boring logs in Appendix A. A summary of laboratory test data is presented on Figure B-1 in Appendix B. The test results are also included in Appendix B. The soluble sulfate and chloride, pH, and minimum resistivity test results are presented in Section 5.7, Soil Corrosion and in Appendix B.

© 2017 Kleinfelder

3. GEOLOGIC CONDITIONS

3.1 REGIONAL GEOLOGY

The alignment is located within the southern Coast Ranges geomorphic province, which is characterized by northwest-trending mountain ranges (2,000 to 4,000, occasionally 6,000 feet elevation above sea level), and valleys. The ranges and valleys trend northwest, sub-parallel to the active San Andreas Fault system. Strata of the Coast Ranges dip beneath alluvium of the Great Valley to the east. To the west is the Pacific Ocean. The coastline is uplifted, terraced and wave-cut. The Coast Ranges are composed of thick Mesozoic and Cenozoic sedimentary strata. The northern and southern ranges are separated by a depression containing the San Francisco Bay. The eastern border is characterized by strike-ridges and valleys in Upper Mesozoic strata. In several areas, Franciscan rocks are overlain by volcanic cones and flows of the Quien Sabe, Sonoma and Clear Lake volcanic fields. West of the San Andreas is the Salinian Block, a granitic core extending from the southern extremity of the Coast Ranges to north of the Farallon Islands.

3.2 SITE GEOLOGY

The site has been regionally mapped by Dibblee as being underlain by alluvial sediments (Dibblee, 2004). These sediments consist of mapped units Qa, alluvial gravel and sand of valley areas, Qg, alluvial gravel and sand of stream channels and Qoa, older alluvium. Bedrock beneath the alluvial sediments is mapped as Paso Robles formation (QTp), weakly indurated pebble conglomerate.

3.3 LOCAL AND REGIONAL FAULTING

The project site is located in a seismically active region. The site is within the influence of several fault systems, which are considered to be active or potentially active. An active fault is a fault that has experienced seismic activity during historic time (since roughly 1800) or exhibits evidence of surface displacement during Holocene time (Bryant and Hart, 2007). The definition “inactive” generally implies that a fault has not been active since the beginning of the Pleistocene Epoch (older than 1.7 million years old). Seismic activity on the faults described below, or other regional faults, may cause ground shaking at the site.

© 2017 Kleinfelder

The site is not located within an Alquist-Priolo Earthquake Fault Zone, as designated by the State of California (Hart, 2007). The Alquist-Priolo Earthquake Fault Zoning Act was passed in 1972 to mitigate the hazard of surface faulting to structures planned for human occupancy.

The site is located approximately 10 miles northeast of the Rinconada fault, as mapped by San Luis Obispo County (1999). The Rinconada fault is deemed capable of a moment magnitude earthquake of 7.5 (Cao et al, 2003). The Rinconada fault is part of a large fault system that runs from Monterey Bay in the north to south of the Cuyama River (Jennings, 1994). The most recent displacement on the Rinconada fault is estimated to be late Quaternary (less than 130,000 years before present) (Rosenberg and Bryant, 2003).

The San Andreas fault, located about 26 miles east of the site, is also a significant fault mapped by Jennings (1994). This fault is deemed capable of a moment magnitude earthquake of 7.4 (Cao, 2003). The most recent displacement on the San Andreas fault is historical (less than 200 years before present) (Bryant et al, 2002).

© 2017 Kleinfelder

4. SITE CONDITIONS

4.1 SITE DESCRIPTION

The terrain through which the proposed transmission lines will be constructed is generally flat to gently rolling. The transmission line alignments cross mainly agricultural and undeveloped lands. Surface vegetation along the alignments includes crops, annual grasses, and various shrubs and trees. A site vicinity map is shown on Figure 1.

4.2 SUBSURFACE CONDITIONS

Based on review of the information shown on the current boring logs (see Appendix A of this report), boring logs completed previously by RRC[1] (See Appendix D of this report), the near-surface materials include Quaternary and Pleistocene alluvial fan deposits, Paso Robles Formation residual soils, and stream channel deposits at creek crossings.

Along the Union Road route, soils encountered in the upper 8 to 27 feet generally consist of medium dense to dense, clayey sand and poorly-graded sand with variable quantities of fine gravel. Close to the Huerhuero Creek channel (see Boring U-3), the sands tend to be less dense (uncorrected Standard Penetration Test blow count of 12 blows per foot) than the alluvial soils that are common in other areas of the project area. However, it appears unlikely that soils below depths of about 3 to 5 feet are loose. Groundwater was not encountered in any of the borings drilled along the Union Road Route.

The above is a general description of the soil conditions encountered within the project area in the exploratory borings for this investigation. More detailed descriptions of the encountered soil and groundwater conditions are presented on the boring logs in Appendix A. It should be noted that soil conditions encountered elsewhere on the alignment can deviate from those conditions encountered at the boring locations. However, we do not expect the soils between our borings will vary significantly in strength or seismic performance characteristics beyond what is described in this report.

[1] RRC Companies, Estrella Substation, report to NextEra Energy, dated June 1, 2016.

© 2017 Kleinfelder

4.3 GROUNDWATER

According to regional well record data published by the State Water Resources Control Board (DWR), regional groundwater levels are generally greater than 30 feet below the ground surface. Groundwater was not encountered during our explorations.

It is possible that groundwater conditions at the site could change due to variations in rainfall, groundwater withdrawal or recharge, construction activities, well pumping, or other factors not apparent at the time the explorations were performed.

© 2017 Kleinfelder

5. CONCLUSIONS AND RECOMENDATIONS

5.1 GENERAL

Based upon the results of our field exploration and laboratory testing programs, it is our professional opinion that the proposed transmission line poles can be supported on reinforced concrete drilled shaft foundations.

The soil conditions encountered during the current investigation and the previous RRC investigation are similar in strength, density, and in engineering characteristics along the alignment alternative. Based on the current field investigation, review of the RRC boring logs, and results of laboratory testing, we have identified one class of similar foundation conditions in order to provide foundation recommendations throughout the project alignment. The selected soil profile and the corresponding alignment alternative is presented in Table 5.1 below.

Table 5.1
Soil Categories for Foundation Design

Soil Profile Cases	General Soil Description	Route Alternative
Case 1	Alluvial Fan Deposits	Union Road

5.2 SEISMIC DESIGN CRITERIA

Seismic design information based upon the 2016 CBC, which utilizes the ASCE 7-10, is presented in Table 5.2. The Maximum Considered Earthquake (MCE) mapped spectral accelerations for 0.2 second and 1 second periods (S_S and S_1),mapped peak ground acceleration (PGA), and mapped long-period transition period (T_L) were estimated based on Section 1613 of the CBC and Chapter 22 of the ASCE 7-10 using the United States Geological Survey (USGS) U.S. seismic design maps. The mapped acceleration values, associated soil amplification factors (F_a and F_v), and corresponding site modified (S_{MS} and S_{M1}) and design spectral accelerations (S_{DS} and S_{D1}), based on CBC, are presented in Table 5.2. The Site Class is estimated to best be defined as D. The Seismic Design Category is estimated to be D.

© 2017 Kleinfelder

Table 5.2
Ground Motion Parameters Based on 2016 CBC

Parameter	Value
S_S	1.370g
S_1	0.510g
Site Class	D
F_a	1.000
F_v	1.500
PGA	0.519
S_{MS}	1.370g
S_{M1}	0.764g
S_{DS}	0.913g
S_{D1}	0.510g
F_{PGA}	1.00
PGA_M	0.519g
Seismic Design Category	D
T_L	12 sec.

5.3 DESIGN GROUNDWATER CONDITIONS

Groundwater was not encountered during drilling of the Union Road alignment and is not anticipated to affect design. Actual groundwater levels at any given location will vary with seasonal variations in rainfall and runoff, adjacent canal or river stage irrigation practices, and other factors not apparent at the time of our field investigation. Kleinfelder did not perform a site-specific hydrogeologic evaluation for this project to evaluate specific seasonal fluctuations, as it was beyond the scope of this study.

5.4 SOIL LIQUEFACTION

5.4.1 General

Liquefaction describes a condition in which saturated soil loses shear strength and deforms as a result of increased pore water pressure induced by strong ground shaking during an earthquake. Dissipation of the excess pore water pressures will produce volume changes within the liquefied soil layer, which causes settlement. Factors known to influence liquefaction include soil type, structure, grain size, relative density, confining pressure, depth to groundwater and the intensity and duration of ground shaking. Soils most susceptible to liquefaction are saturated, loose sandy

© 2017 Kleinfelder

soils, and low plasticity clays and silts. If liquefaction occurs, structures above the liquefiable layers may undergo settlement.

Based on the relative density, soil type, and anticipated ground shaking at the site, the potential for liquefaction is considered negligible.

5.5 DRILLED SHAFT FOUNDATIONS

5.5.1 Axial Capacity

Axial loads imposed by the poles should be supported by the frictional capacity of the pier foundations. End bearing was not considered in the axial capacity due to the potential for loose materials to exist at the bottoms of the pier holes during construction that cannot be effectively cleaned out. The downward vertical movement associated with mobilizing the full end-bearing resistance of drilled shafts is frequently beyond structural tolerances and normally well beyond the movement required to engage shaft side friction.

A curve illustrating the ultimate axial compressive capacity of a unit (1-foot) diameter straight-sided drilled pier installed from the existing ground surface under static conditions for each soil profile case is shown on Figure C-1.

Capacities for drilled piers with diameters other than 1 foot may be obtained by multiplying the capacity for the 1-foot diameter pier by the actual pier diameter (in feet). The weight of the foundation is not included in the ultimate resistance shown on Figure C-1.

Axial capacity was computed using Federal Highway Administration (FHWA) procedures for design of drilled pier foundations (Brown et al., 2010). For evaluation of allowable axial capacity under static conditions, we recommend a factor of safety of 3 be applied to the ultimate capacity per the General Order 95 (GO 95) code. A one-third increase in the allowable capacity may be used for consideration of transient loads such as wind or seismic.

© 2017 Kleinfelder

5.5.2 Design Using Slurry Drilling Methods

The use of bentonite or polymer slurry to stabilize a hole during pier drilling should not cause a reduction in side friction provided the guidelines presented in the FHWA drilled shafts manual (Brown et al., 2010) are followed.

5.5.3 Estimated Settlement

Based on the methods outlined by Brown et al. (2010), total static settlement of each drilled pier should be on the order of 0.2 percent of the pier diameter for a drilled pier designed and constructed in accordance with the recommendations presented in this report. The majority of the settlement should occur during and shortly after application of the structure loads.

5.5.4 Lateral Response

Resistance to lateral loads will be provided by passive resistance of the soil against the pier foundations and by the bending stiffness of the piers. Table 5.3 contain input soil parameters for lateral analysis of drilled pier foundations using the LPILE computer program (by Ensoft, Inc., Version 2013).

Table 5.3
LPILE Geotechnical Parameters
Case 1 – Union Road Alignment

Depth (feet)	P-Y Curve Soil Model	Effective Unit Weight (pcf)	Cohesion (psf)	Effective Friction Angle (degree)	k (pci)	ε_{50}
0 to 15	Sand (Reese)	120	--	33	90	--
15 to 30	Stiff Clay w/o Free Water (Reese)	125	2000	--	500	0.007

Per PG&E design standards, the total pier top rotation under the applied loads should be within 0.5 degrees of vertical and the pier head deflection should be less than 2 percent of the pier diameter. In some cases for suspension poles not subject to line angles, the amount of allowable rotation can be increased provided it does not cause line tension or conductor minimum height issues.

5.6 CONSTRUCTION CONSIDERATIONS – DRILLED PIER FOUNDATIONS

Successful completion of drilled pier foundations requires good construction procedures. Drilled pier excavations should be constructed by a skilled operator using techniques that allow the excavations to be completed, the reinforcing steel placed, and the concrete poured in a continuous manner to reduce the time that excavations remain open. Drilled excavations should not remain open overnight. For this project, potentially caving soil conditions exist in some areas of the site. The following considerations should be implemented during construction of drilled shaft foundations.

5.6.1 Caving/Water Intrusion

Considering the proposed pole construction method, use of temporary steel casings is not anticipated to be practical, and slurry drilling methods will likely be needed in areas of severely caving sandy soils. Use of slurry drilling methods normally requires experienced construction personnel to batch and mix the slurry, test the slurry for proper mixing, hydration, viscosity and other important properties, and to monitor slurry performance during drilling. Slurry drilling methods, if used, should be in accordance with the guidelines presented in the FHWA drilled shafts manual (Brown et al., 2010). This guideline recommends bentonite slurry mixtures not be left in the hole for more than about 4 hours in order to avoid potential side friction losses that may be caused by excessive thickness of bentonite filter cake on the hole wall.

5.6.2 Temporary Casing

If temporary steel casing is used, we recommend its removal from the hole as concrete is being placed. The bottom of the casing should be maintained below the top of the concrete during casing withdrawal and concrete placement operations. Casing should not be withdrawn until sufficient quantities of concrete have been placed into the excavation to balance the groundwater head outside the casing. Continuous vibration of the casing or other methods may be required to reduce the potential for voids occurring within the concrete mass during casing withdrawal. Casing should not be left in the ground except by permission of the project geotechnical and structural engineers.

© 2017 Kleinfelder

5.6.3 Bottom Preparation

Drilled shaft excavations extending below groundwater levels should be cleaned such that less than about 1 inch of loose soil remains at the bottom of the drilled hole. Since the piers should be designed to derive their support in skin friction along the sides of the shafts, consideration could be given to over-drilling the shafts to accommodate any sloughing that may occur between drilling and concrete placement. It is recommended that a representative from Kleinfelder observe each drilled shaft excavation to verify soil and excavation conditions prior to placing steel reinforcement or concrete.

5.6.4 Steel and Concrete Placement

It is recommended that steel reinforcement and concrete be placed on the same day of completion of each drilled shaft excavation to reduce the potential for caving and reduce the quantity of suspended soil particles that may settle to the bottom of the hole during wet-method construction. Excavation depths should be checked several times before concrete placement to ensure excessive sedimentation has not occurred. Concrete used for pier construction should be discharged vertically into the drilled hole to reduce aggregate segregation. Under no circumstances should concrete be allowed to free-fall against either the steel reinforcement or the sides of the excavation during shaft construction.

If water or drilling fluids are present during concrete placement, concrete should be placed into the hole using tremie methods. Tremie concrete placement should be performed in strict accordance with ACI 304R. The tremie pipe should be rigid and remain below the surface of the in-place concrete at all times to maintain a seal between the water or slurry and fresh concrete. The upper concrete seal layer will likely become contaminated with excess water and soil as the concrete is placed and should be removed to expose uncontaminated concrete immediately following completion of concrete placement. It has been our experience that the thickness of the contaminated concrete seal layer will depend on the shaft diameter and construction method, but it can approach the shaft diameter.

It is recommended that concrete used for tremie construction have a slump of 6 to 8 inches. The concrete mix should be designed with an appropriate water/cement ratio for the design strength and use water reducing/plasticizing admixtures to achieve the recommended slump. Adding water to a conventional mix to achieve the recommended slump should not be allowed. Vibration of

© 2017 Kleinfelder

concrete under water during placement is generally not recommended as it may result in contamination of the concrete or cause aggregate settlement within the shaft. A relatively fluid and properly designed concrete mix helps to avoid segregation, rock pockets, and poor adherence of the concrete to the reinforcing steel. Careful vibration of the tops of the shafts following removal of the seal layer is recommended to consolidate the concrete around anchor bolt assemblies.

5.7 SOIL CORROSION

Kleinfelder has completed laboratory testing to provide data regarding corrosivity of onsite soils. Our scope of services does not include corrosion engineering and, therefore, a detailed analysis of the corrosion test results is not included in this report. A qualified corrosion engineer should be retained to review the test results and design protective systems that may be required. Kleinfelder may be able to provide those services.

Laboratory chloride concentration, sulfate concentration, pH, oxidation reduction potential, redox, sulfide and electrical resistivity tests were performed for a near surface soil sample. The results of the tests are attached and are summarized in Table 5.4. If fill materials will be imported to the project site, similar corrosion potential laboratory testing should be completed on the imported material.

Table 5.4
Chemistry Laboratory Test Results

Boring and Depth	Material	Resistivity, ohm-cm	pH	Water-Soluble Ion Concentration, ppm	
				Chloride	Sulfate
U-1 @ 0-5	Poorly-Graded Sand (SP)	1,800	7.05	59.4	40.3
U-5 @ 0-2.5	Poorly-Graded Sand (SP)	1,310	6.94	23.1	132.8

Ferrous metal and concrete elements in contact with soil, whether part of a foundation or part of the supported structure, are subject to degradation due to corrosion or chemical attack. Therefore, buried ferrous metal and concrete elements should be designed to resist corrosion and degradation based on accepted practices.

© 2017 Kleinfelder

Based on the "10-point" method developed by the American Water Works Association (AWWA) in standard AWWA C105/A21.5, the soils at the site are anticipated to be mildly corrosive to buried ferrous metal piping, cast iron pipes, or other objects made of these materials. We recommend that a corrosion engineer be consulted to recommend appropriate protective measures, if required.

The degradation of concrete or cement grout can be caused by chemical agents in the soil or groundwater that react with concrete to either dissolve the cement paste or precipitate larger compounds within the concrete, causing cracking and flaking. The concentration of water-soluble sulfates in the soils is a good indicator of the potential for chemical attack of concrete or cement grout. The American Concrete Institute (ACI) in their publication "Guide to Durable Concrete" (ACI 201.2R-08) provides guidelines for this assessment. The results of sulfate test indicate the potential for deterioration of concrete is mild, no special requirements should be necessary for the concrete mix.

Concrete and the reinforcing steel within it are at risk of corrosion when exposed to water-soluble chloride in the soil or groundwater. Chloride tests detected only a minimal presence of chloride in the samples. The project structural engineer should review this data to determine if remedial measures are necessary for the concrete reinforcing steel.

6. LIMITATIONS

This report presents information for planning, permitting, design, and construction of the Paso Robles-Estrella Transmission Line Project in San Luis Obispo County, California. This report should not be used to define site conditions for contractual purposes, and Kleinfelder will accept no liability for changed conditions claims based on this report.

Recommendations contained in this report are based on conditions encountered in our exploratory borings, evaluation of existing geotechnical data, geologic interpretation based on published articles and geotechnical data, and our present knowledge of the proposed construction.

It is possible that soil conditions could vary between or beyond the points explored. If the scope of the proposed construction, including the proposed alignment location, changes from that described in this report, we should be notified immediately to review the information and possibly provide supplemental recommendations.

This report has been prepared in substantial accordance with the generally accepted geotechnical engineering practice as it exists in the site area at the time of our study. No warranty is expressed or implied.

This report may be used only by the client and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party other than the client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

FROM TERZAGHI AND PECK, 1948

PLASTICITY

DESCRIPTION	LL	FIELD TEST
Non-plastic	NP	A 1/8-in. (3 mm.) thread cannot be rolled at any water content.
Low (L)	< 30	The thread can barely be rolled and the lump or thread cannot be formed when drier than the plastic limit.
Medium (M)	30 - 50	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump or thread crumbles when drier than the plastic limit.
High (H)	> 50	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump or thread can be formed without crumbling when drier than the plastic limit.

STRUCTURE

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness.
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.

ANGULARITY

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

APPENDIX C

Analysis Results

Notes:

1. Axial capacities of drilled piers with diameters other than one foot may be obtained by multiplying the unit capacity by the diameter of the pile (in feet).
2. Ultimate tensile capacity may be obtained by multiplying the ultimate compressive capacity by a factor of 0.8.
3. The curve represents ultimate axial capacity of a straight-sided drilled pier. See text discussion for factor of safety and group effects.
4. Post-liquefaction does not apply to Case 1.

BORING LOG KEY

TYPICAL SOIL AND ROCK SYMBOLS (USCS CLASSIFICATION)

- Lean Clay (CL)
- Fat Clay (CH)
- Silt (ML)
- Elastic Silt (MH)
- Silty Sand (SM)
- Clayey Sand (SC)
- Silty, Clayey Sand (SC-SM)
- Poorly-Graded Sand (SP)
- Well-Graded Sand (SW)
- Poorly-Graded Gravel (GP)
- Well-Graded Gravel (GW)
- Clayey Gravel (GC)
- Silty Gravel (GM)
- Silty Clay (CL-ML)
- Claystone
- BASALT
- Limestone
- Sandstone
- Siltstone
- Fill Material
- Shale

DEGREE OF WEATHERING

1) Unweathered: No evidence of any chemical or mechanical alteration.
2) Slightly weathered: Slight discoloration on surface, slight alteration along discontinuities, less than 10% of the rock volume altered.
3) Moderately weathered: Discoloring evident, surface pitted and altered with alteration penetrating well below rock surfaces, weathering "halos" evident, 10% to 50% of the rock volume altered.
4) Highly weathered: Entire mass discolored, alteration pervading nearly all of the rock with some pockets of slightly weathered rock noticeable, some minerals leached away.
5) Decomposed: rock reduced to a soil with relicit rock texture, generally molded and crumbled by hand.

SOIL STRUCTURE

Calcareous..... Containing calcium carbonate

Slickensided..... The presence of planes of weakness having a slick and glossy appearance

Interbedded..... Alternating layers of varying material

APPENDIX E

GBA Information Sheet

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

Executive Summary

This executive summary presents the results of a Phase I Environmental Site Assessment (Phase I ESA) for the proposed Estrella Substation Project in San Luis Obispo County, California (the "subject property"). The property consists of approximately 15.25 acres of vineyards along Union Road, east of Paso Robles. The purpose of this Phase I ESA is to meet due diligence requirements under the Comprehensive Environmental Response, Compensation, and Liability Act prior to acquisition and development of the property.

The Phase I ESA followed the standards described in the American Society for Testing and Materials (ASTM) Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Deletions or deviations from ASTM Standard E 1527-13 are documented in this report. The client provided shapefiles of the boundaries of the subject property, and this description was taken as an accurate and true representation of the site. Independent verification of the subject property boundaries was not conducted by SWCA Environmental Consultants (SWCA) as part of this Phase I ESA.

The following list presents selected findings of this Phase I ESA:

- SWCA's review of historical aerial photographs and topographic maps found that the subject property and surrounding properties were historically undeveloped vacant land prior to their current use as vineyards. The past uses of the subject property and nearby properties are not considered to be a recognized environmental condition (REC) for the subject property.

- SWCA's review of parcel information from the County Assessor's Office and County Department of Planning and Building found that the parcel is noted as an Agricultural Preserve and Kit Fox Mitigation Area. It is also subject to the Paso Robles Groundwater Basin Urgency Ordinance and County-Wide Water Conservation Program, and high hazards noted were Airport Review Area and Flood Hazard Area. While not related to RECs on the subject property, these items may be of interest to potential developers.

- SWCA's interview with a representative from the subject property verified that the subject property has never been developed and has never had a structure on it. He is not aware of any potential contamination, or of any leaks, spills, cleanups, or any potential issues related to soil and groundwater contamination. He noted that when the water well was installed the water was tested and had no issues. The interview did not identify any RECs for the subject property.

- A Phase I ESA User Questionnaire for the subject property, completed by NextEra Energy Transmission West, LLC, indicated that the property is subject to the Williamson Act. This is a California law that provides relief of property tax to owners of farmland and open-space land in exchange for a ten-year agreement that the land will not be developed or otherwise converted to another use. While this may be of interest to purchasers and developers, it is not considered to be a REC.

- SWCA's review of the Environmental Data Resources, Inc., environmental database search generated on April 27, 2016, and supplemental state records from the California State Water Resources Control Board, California Department of Toxic Substances Control, and California Department of Conservation's Division of Oil, Gas & Geothermal Resources found that the subject property and nearby properties were not identified in any of the searched databases.

- SWCA considered the potential for contaminant migration; however, SWCA did not identify any potential off-site sources of vapor intrusion or vapor encroachment to the subject property.

- SWCA's reconnaissance of the subject property verified the assumed uses of the subject property and surrounding properties. An empty plastic tank was observed near a well in the west of the subject property, but no stored chemicals, evidence of significant ground staining, unusual odors, or potential sources of contamination were noted during the site reconnaissance.

SWCA has completed a Phase I ESA of the subject property based on information obtained during the site investigation, conducted on April 26, 2016, and the information obtained through the activities of this Phase I ESA, excluding the limitations.

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the 15.25-acre proposed Estrella Substation Project site in San Luis Obispo County, California, the *property*. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this *report*. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *property*.

1 INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (Phase I ESA) for the proposed Estrella Substation Project in San Luis Obispo County, California (the "subject property"). The property is approximately 15.25 acres of vineyards along Union Road, east of Paso Robles. SWCA Environmental Consultants (SWCA) completed this Phase I ESA for the client as part of an April 23, 2015, proposed scope of work for environmental planning, permitting, resource surveys, and compliance services for the Estrella Substation Project.

1.1 Purpose

The purpose of this Phase I ESA is to meet due diligence requirements under the Comprehensive Environmental Response, Compensation, and Liability Act prior to acquisition of the property.

The Phase I ESA followed the standards described in the American Society for Testing and Materials (ASTM) Standard E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). Deletions or deviations from ASTM Standard E 1527-13 are documented in this report. The goal of the processes established by this practice is to assess the property, to the extent practical, for the potential presence of recognized environmental conditions (RECs), defined in the ASTM standard as "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*." De minimis conditions, which generally do not present risks of harm to public health or the environment and which generally would not be the subject of enforcement actions if brought to the attention of appropriate regulating agencies, are not RECs.

This Phase I ESA did not include activities such as inspections or sampling for the presence of asbestos-containing materials, radon, other radioactive substances, vapor intrusion, lead-based paint, non-hazardous wastes and materials, mold, or biological and medical wastes. No soil, air, or water samples were collected for this Phase I ESA.

1.2 Scope of Work

To achieve the objective referenced above, SWCA completed the following tasks:

- Reviewed intermittent topographic maps and/or aerial photographs.
- Surveyed relevant documents in order to assess the subject property's physiography, including a review of the local hydrogeology and geology of the surrounding area.
- Reviewed available federal and state regulatory databases.
- Visually surveyed the subject property by walking on and driving around the subject property and visually surveyed the surrounding properties from the subject property perimeter.

1.3 Limitations

SWCA warrants that qualified professionals in conformance with ethical business practices and industry standards prepared this report. Credentials of the individuals involved in preparing this report are included in Appendix A.

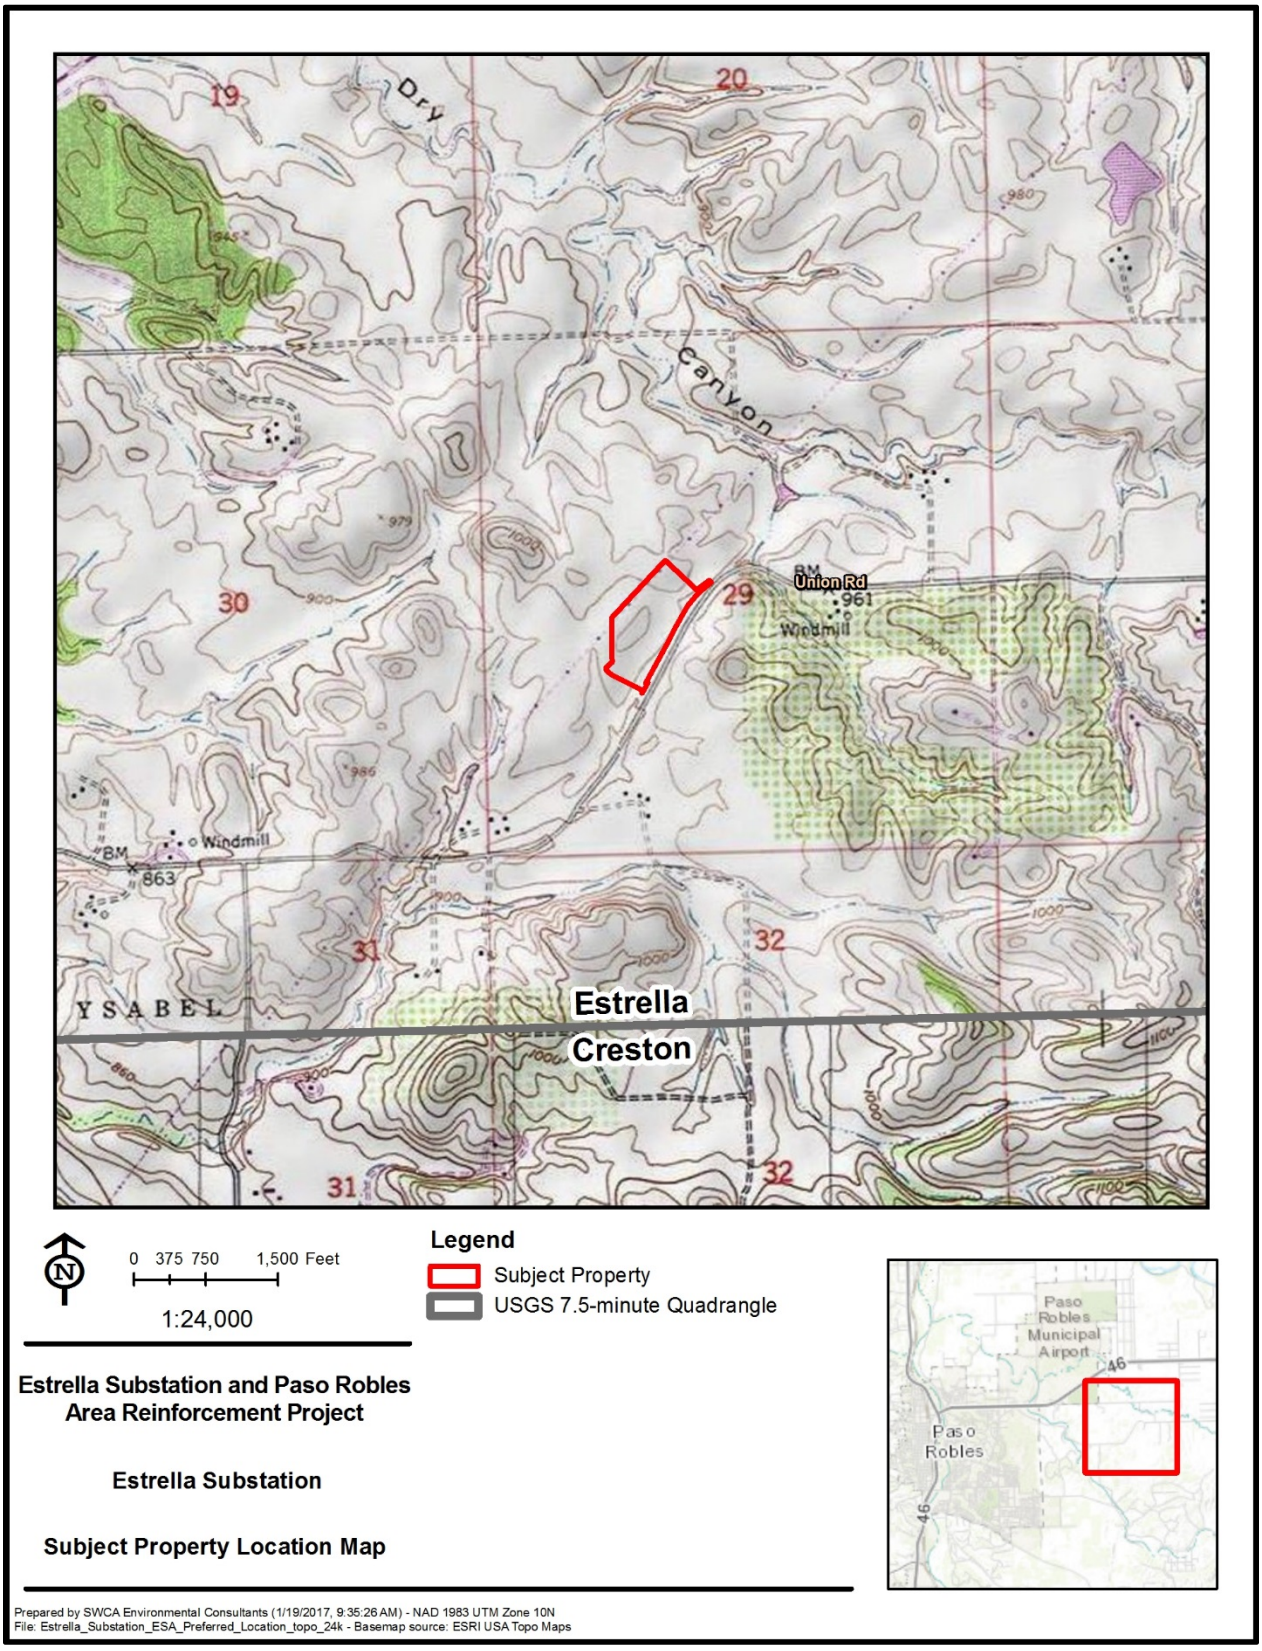
Some standard historical sources are not readily available and thus were not used to prepare this Phase I ESA. SWCA was not provided with judicial records of environmental liens and activity and use limitations (AULs). Based on our professional experience, Sanborn fire insurance maps and city directories were assumed to not be available for the subject property because of its rural nature and because it has remained undeveloped. Because of the lack of available aerial photographs and U.S. Geological Survey (USGS) topographic maps, the commonly used 5-year interval between photographs and topographic dates could not be followed for all photographs and maps reviewed. Standard historical sources dating back to 1940 were not reasonably attainable for the subject property. Because supplemental data sources provided sufficient information, this gap in the data is not thought to have affected SWCA's ability to identify RECs on the subject property. SWCA's findings and conclusions within this assessment do not take into consideration the limitations identified in this report.

The information contained in this report relates only to the subject property and should not be extrapolated or construed to apply to any other site. The description of the subject property as provided herein represents the conditions of the subject property as it existed on the date of the site reconnaissance. The contents of this report are valid as of the date shown on the report cover. The information presented in this report is intended for the exclusive use of NextEra Energy Transmission West, LLC (NEET West), and its affiliates, underwriters, and lenders. Reliance of any other parties on the information presented herein is the sole responsibility of said parties.

2 PROPERTY DESCRIPTION

The subject property is approximately 15.25 acres of vineyards along Union Road. It is located along the west side of Union Road approximately 1 mile west of the Branch Road intersection. The majority of the subject property is in the southern part of an approximately 97-acre parcel (Assessor's Parcel Number [APN] 015-053-011, the eastern parcel) at 5410 Union Road. A small area (approximately 0.12 acre) with a well in the west of the subject property is part of an approximately 82-acre parcel (APN 015-053-012, the western parcel). Both parcels are owned by Steinbeck Vineyards #2 LLC. The eastern parcel is listed as both 98.58 and 97.11 acres by the San Luis Obispo County Assessor's Office and Department of Planning and Building. The subject property is noted as an Agricultural Preserve and Kit Fox Mitigation Area, and as subject to the Paso Robles Groundwater Basin Urgency Ordinance and County-Wide Water Conservation Program. High hazards noted for the eastern parcel were Airport Review Area and Flood Hazard Area. The western parcel was listed as an Airport Review Area but not a Flood Hazard Area (San Luis Obispo County 2016a, 2016b). The subject property is depicted in Figures 1 and 2, and parcel details from the County are included in Appendix B.

Figure 1. Subject Property Location



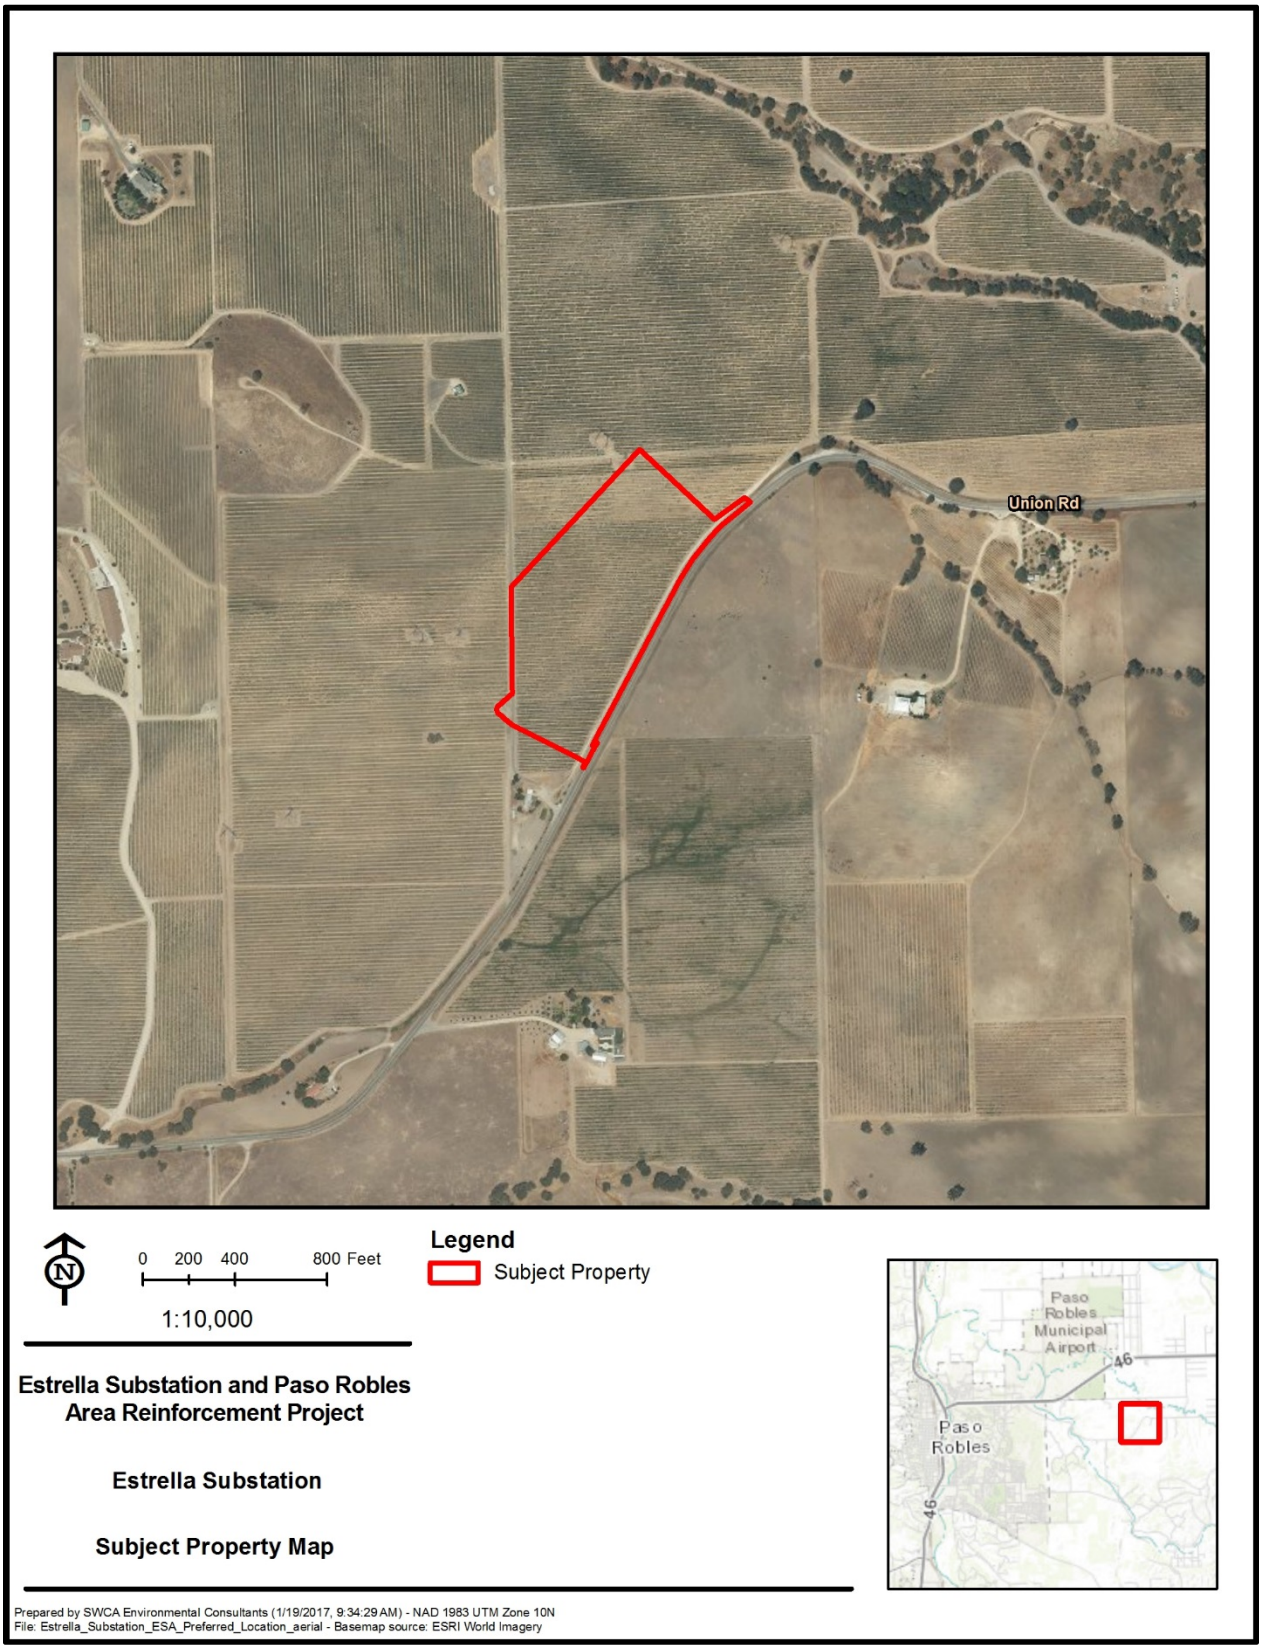


Figure 2. Subject Property and Surrounding Properties

3 PHYSICAL SETTING ANALYSIS

The following sections present physical characteristics of the subject property, as obtained from available natural history information sources.

3.1 Topography

The USGS Estrella, California 7.5-minute topographic map indicates that the subject property is located in an area of low rolling hills below the Cholame Hills to the northeast and the Santa Lucia Range to the west. The subject property includes a low hill in the southwest with a rift in the northeast. It appears that the subject property would drain away from the hill south toward Union Road and into a tributary of Huerhuero Creek. The northern part of the subject property likely flows indirectly into Dry Canyon to the northeast. The greater vicinity has an overall northwest slope that follows the parallel Huerhuero Creek and Dry Canyon corridors. Dry Canyon later meets Huerhuero Creek, which flows to the Salinas River, and ultimately to Monterey Bay. The elevation of the subject property varies but appears to average approximately 730 feet above mean sea level.

3.2 Soils

A review of soils data from the Natural Resources Conservation Service (NRCS) (2016a) indicates that the northern part of the subject property is mapped as Nacimiento-Los Osos complex soils, a corridor parallel with Union Road is mapped as Arbuckle-San Ysidro complex soils, and the remainder is mapped as Arbuckle-Positas complex soils. The Nacimiento series consists of moderately deep, well drained soils that formed in material weathered from calcareous shale and sandstone. Nacimiento soils are found on rolling uplands. Los Osos soils consist of moderately deep, well drained soils in uplands, that formed in material weathered from sandstone and shale. The Arbuckle series consists of very deep, well drained soils on low terraces, that formed in alluvial materials primarily from conglomerate and metasedimentary rocks. San Ysidro soils are deep, moderately well drained soils that formed in alluvium from sedimentary rocks. They are found on old, low terraces. Lastly, the Positas series consists of deep and very deep, moderately well drained soils on stream terraces, that formed in alluvial material from mixed rock sources (NRCS 2016b). Soils data are available as part of Appendix C.

3.3 Geology and Hydrogeology

Drainage in the vicinity of the subject property has been affected by agriculture and development to the extent that some natural watercourses no longer exist and some drainage in the area follows human-made channels or diversions. Surface runoff on the subject property drains away from the on-site hill, south toward Union Road and into a tributary of Huerhuero Creek. The northern part of the subject property likely flows indirectly into Dry Canyon to the northeast. The greater vicinity has an overall northwest slope that follows the parallel Huerhuero Creek and Dry Canyon corridors. Dry Canyon later meets Huerhuero Creek, which flows to the Salinas River, and ultimately to Monterey Bay. Mapping from the California Department of Water Resources (CDWR) Groundwater Information Center Interactive Map Application (2016a) does not depict topographic gradients in this area.

The subject property is located within the Paso Robles Area subbasin of the Central Valley groundwater basin (CDWR 2003a, 2016b). The Paso Robles Subbasin is bordered on the north by the Upper Valley Aquifer Subbasin, on the east by the Temblor Range, on the south by the La Panza Range, and on the west by the Santa Lucia Range. The subbasin is drained by the Salinas River and Estrella, San Juan, and Huerhuero Creeks.

Groundwater in the subbasin is found in Holocene age alluvium and the Pleistocene age Paso Robles Formation. Holocene-age alluvium consists of unconsolidated, fine- to coarse-grained sand with pebbles and boulders. This alluvium provides limited amounts of groundwater and reaches 130 feet thick near the Salinas River, but is generally less than 30 feet thick in the minor stream valleys. Its high permeability results in a well production capability that often exceeds 1,000 gallons per minute. Groundwater in the Holocene alluvium is mostly unconfined. The Pleistocene-age Paso Robles Formation, which is the most important source of groundwater in the subbasin, is unconsolidated, poorly sorted, and consists of sand, silt, gravel, and clay. This formation reaches a thickness of 2,000 feet and groundwater within it is generally confined. Natural recharge in the subbasin is derived from infiltration of precipitation, seepage from streams, and return flow from irrigation and other uses. Hydrographs show that groundwater levels have been steady since 1995. Groundwater flow in the subbasin is generally northwestward (CDWR 2003b).

Although a water well is located in the west of the subject property, none were mapped on the subject property by Environmental Data Resources, Inc. (EDR), and the nearest well was mapped nearly 1 mile to the northwest. No depth-to-water measurements were available, and groundwater mapping from the CDWR (2016a) does not include data for the area of the subject property.

With regard to surface geology, the subject property is mapped Plio-Pleistocene and Pliocene loosely consolidated deposits of sandstone, shale, and gravel. This mapping unit extends along the area between the Cholame Hills to the northeast and the Santa Lucia Range to the west, intersected by Quaternary alluvium and marine deposits along the major drainage corridors (USGS 2016a).

4 HISTORICAL PROPERTY USES AND RECORDS REVIEW

The history of the subject property and adjacent properties was reviewed in accordance with the applicable ASTM standards, except as noted in Section 1.3. Historical uses of the subject property were determined based on a review of readily available, reasonably ascertainable historical data, including historical topographic maps and aerial photographs. Based on our professional experience with similar rural sites, SWCA assumed that Sanborn fire insurance maps are not available for the subject property, and that city directories would not be available or would not provide information pertinent to the conclusions of this report.

4.1 Historical Map Review

SWCA reviewed USGS topographic maps of the area dated from 1919 to 2012 (USGS 2016b). A summary of SWCA's evaluation of the reviewed topographic maps is provided in Table 1.

Table 1. Summary of Historical Topographic Map Interpretation

Date of Topographic Map	Observations
1919 and 1943 Paso Robles USGS 15-minute series (1:62,500) 1948 Estrella USGS 7.5-minute series (1:24,000)	The subject property and surrounding area are depicted as primarily vacant undeveloped land with what are likely widely spaced residential structures. Union Road is present in an alignment close to its current location. By 1943 and 1948, few changes are evident, except that several structures are present southeast of the subject property, and in other areas single structures have become multiple structures.
1961 Paso Robles USGS 15-minute series (1:62,500) 1979 and 2012 Estrella USGS 7.5-minute series (1:24,000)	By 1961, a transmission line is depicted along the northwest of the subject property. Otherwise the subject property and surrounding area do not appear to have changed significantly. No significant changes are evident between 1961 and 2012.

4.2 Historical Aerial Photograph Review

SWCA reviewed available historical aerial photographs of the subject property dated from 1937 to 2013. A summary of SWCA's evaluation of the reviewed aerial photography is provided in Table 2.

Table 2. Summary of Historical Aerial Photograph Interpretation

Date of Aerial Photograph	Observations
1937, 1949, 1956, and 1969 EDR Aerial Photographs 1"=500'	In 1937, the subject property and adjacent land appears to be vacant, undeveloped, and undisturbed except for Union Road to the southeast. Land slightly farther southeast appears to be in agricultural use. By 1949, little seems to have changed, but evidence of agricultural use appears on the subject property and adjacent land, as the fields appear to have parallel crop lines. In 1956, a dirt road leads from Union Road to a transmission line along the northwest of the subject property. No significant changes are apparent by 1969.
1978 to 2013 (10 photographs) EDR and Google Earth Aerial Photographs Various scales	Little appears to have changed by 1978, except that land is disturbed to the southwest, where a home may have been constructed. No significant changes to the subject property, adjacent properties, or the vicinity are evident from 1978 to 2013.

4.3 Summary of Historical Use of Property

The subject property and surrounding properties were historically vacant and undeveloped, with some agricultural and residential use. The subject property itself remains undeveloped agricultural land, surrounded by agricultural land with a few homes.

4.4 Previously Completed Environmental Reports

SWCA is not aware of and was not provided with previous Phase I ESA reports or other relevant environmental reports for review.

4.5 Environmental Liens and Activity and Use Limitations

SWCA's review of a March 24, 2015, title report for the subject property (First American Title Company 2015) did not identify environmental liens or environmental activity and use limitations (AULs) for the subject property. SWCA was not provided with judicial records of environmental liens or AULs.

4.6 Interviews

SWCA contacted Ryan Newkirk, the manager and owner of the Steinbeck winery/vineyards. He stated that the subject property has never been developed and has never had a structure on it. The only past use he knows of is vacant land prior to becoming vineyards. He is not aware of any potential contamination, nor is he aware of any leaks, spills, cleanups, or any potential issues related to soil and groundwater contamination. He noted that the water well was installed around 2008. He said that at that time the water was tested and had no issues.

A Phase I ESA User Questionnaire for the subject property was completed by NEET West, on April 27, 2016. The person who completed the questionnaire answered that a search of recorded land-title records had not identified environmental liens against the property. However, with regard to activity and use

limitations, the property is subject to the Williamson Act. This is a California law that provides relief of property tax to owners of farmland and open-space land in exchange for a ten-year agreement that the land will not be developed or otherwise converted to another use. The person stated that the purchase price reasonably reflects the fair market value of the property, and that there were no obvious indicators of contamination on the subject property. Documentation of the interview and a copy of the Phase I ESA User Questionnaire is provided in Appendix D.

5 ENVIRONMENTAL REGULATORY REVIEW

SWCA conducted an environmental regulatory review to establish the environmental history of the subject property and surrounding area to ascertain whether hazardous waste or hazardous material management, handling, treatment, or disposal activities have occurred on or near the subject property.

5.1 Federal and State Environmental Records

An environmental database report generated by EDR on April 27, 2016, was used to access environmental records for the subject property and the surrounding properties. The proximity of listed facilities was reviewed to determine the potential effect, if any, these facilities may have on the subject property. The databases searched by EDR include those specified by ASTM Standard E 1527-13, as well as several additional federal and state databases and databases proprietary to EDR. EDR updates its records in accordance with ASTM Standard E 1527-13 guidelines. Additional listed facilities that EDR has not identified may exist within a 1-mile radius.

SWCA also reviewed records from the California State Water Resources Control Board's (SWRCB) GeoTracker website (SWRCB 2016), which contains environmental data for regulated facilities in California including cleanup sites and hazardous waste facilities; the California Department of Toxic Substances Control's (DTSC) EnviroStor website (DTSC 2016), which includes data for leaking underground storage tank and other cleanup sites, land disposal sites, and hazardous waste permitted facilities; and the California Department of Conservation's Division of Oil, Gas & Geothermal Resources Interactive Well Finder (California Department of Conservation 2016), which identifies wells and facilities related to oil and gas.

The subject property and nearby properties were not identified in any of the searched databases. No orphan sites (facilities with incomplete location information) were identified. Appendix C provides copies of the EDR reports and site-specific queries from the other agencies.

SWCA considered the potential for contaminant migration from listed facilities, including the potential for vapor migration in the subsurface, in accordance with ASTM Standard E 1527-13. However, SWCA did not identify potential sources of vapor intrusion or vapor encroachment for the subject property.

6 PROPERTY RECONNAISSANCE

Jenny Addy of SWCA completed the Phase I ESA site investigation for the subject property on April 26, 2016. The subject property is accessible from Union Road where an unpaved access road heads north along the western edge of the subject property, and the property reconnaissance consisted of walking and driving within the subject property. Photographs taken during the property reconnaissance are included in Appendix E.

6.1 Property Inspection

The subject property is used for agriculture, and is currently planted with grapes for winemaking. The property is bounded on the southeast side by Union Road, and on the west side by an unpaved road. A transmission line borders the northwestern edge of the subject property. A residence was observed adjacent to the southwestern corner of the property; a large water tank was present to the north of the residence.

Well and a water pipeline was observed in the west of the subject property, west of the access road. An unlabeled empty plastic tank was observed with piping connecting it to the water pipeline. Near the water pipeline an empty, unlabeled plastic tank, presumably for herbicide, pesticide, or fertilizer, was observed. No spills or soil staining were observed around the tanks. No evidence of ground staining, unusual odors, or potential sources of contamination was noted during anywhere on or adjacent to the subject property during the site reconnaissance. Representative photographs of the subject property are available in Appendix E.

7 PHASE I ESA FINDINGS

The following list presents selected findings of this Phase I ESA:

- SWCA's review of historical aerial photographs and topographic maps found that the subject property and surrounding properties were historically undeveloped vacant land prior to their current use as vineyards. The past uses of the subject property and nearby properties are not considered to be a REC for the subject property.

- SWCA's review of parcel information from the County Assessor's Office and County Department of Planning and Building found that the parcel is noted as an Agricultural Preserve and Kit Fox Mitigation Area. It is also subject to the Paso Robles Groundwater Basin Urgency Ordinance and County-Wide Water Conservation Program, and high hazards noted were Airport Review Area and Flood Hazard Area. While not related to RECs on the subject property, these items may be of interest to potential developers.

- SWCA contacted Ryan Newkirk, the manager and owner of the Steinbeck winery/vineyards. He stated that the subject property has never been developed and has never had a structure on it. The only past use he knows of is vacant land prior to becoming vineyards. Mr. Newkirk is not aware of any potential contamination, nor is he aware of any leaks, spills, cleanups, or any potential issues related to soil and groundwater contamination. He noted that the water well was installed around 2008. He said that at that time the water was tested and had no issues.

- A Phase I ESA User Questionnaire for the subject property was completed by NEET West, on April 27, 2016. The person who completed the questionnaire answered that a search of recorded land-title records had not identified environmental liens against the property. However, with regard to activity and use limitations, the property is subject to the Williamson Act. This is a California law that provides relief of property tax to owners of farmland and open-space land in exchange for a ten-year agreement that the land will not be developed or otherwise converted to another use. The person stated that the purchase price reasonably reflects the fair market value of the property, and that there were no obvious indicators of contamination on the subject property. Documentation of the interview and a copy of the Phase I ESA User Questionnaire is provided in Appendix E.

- SWCA's review of the EDR environmental database search generated on April 27, 2016, and supplemental state records from the SWRCB, DTSC, and California Department of Conservation's Division of Oil, Gas & Geothermal Resources found that the subject property and nearby properties were not identified in any of the searched databases.

- SWCA considered the potential for contaminant migration; however, SWCA did not identify any potential off-site sources of vapor intrusion or vapor encroachment to the subject property.

- SWCA's reconnaissance of the subject property verified the assumed uses of the subject property and surrounding properties. An empty plastic tank was observed near a well in the west of the subject property, but no stored chemicals, evidence of significant ground staining, unusual odors, or potential sources of contamination were noted during the site reconnaissance.

8 PHASE I ESA CONCLUSIONS

SWCA has completed a Phase I ESA of the subject property based on information obtained during the site investigation, conducted on April 26, 2016, and the information obtained through the activities of this Phase I ESA, excluding the limitations.

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the 15.25-acre proposed Estrella Substation Project site in San Luis Obispo County, California, the *property*. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this *report*. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *property*.

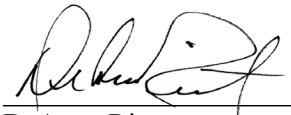
10 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS



We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312. Our qualifications are presented in Appendix A of this report.

STEVEN M. O'BRIEN
Environmental Specialist

Education / Training

- B.A., Biology / Chemistry, Gettysburg College; 1994

Expertise

- ESAs, EDDAs, EBSs
- Wetland delineation and hydric soils
- Stream channel assessment and restoration
- State/National Environmental Policy Act (S/NEPA) documentation
- Protected species
- 404/401 permitting
- Construction oversight
- Project management

Relevant Projects

- Phase I EDDAs for nine Airport Expansion Projects
- Phase I ESA and SWPPP Review for Trucking Facilities; Rayne, Louisiana
- 52-square-mile Phase I ESA for Wind Farm Construction; Colorado
- 43,000-acre Phase I ESA for Wind Farm Construction; Williams, Arizona
- Numerous Phase I ESAs for oil & gas facilities; Wyoming, North Dakota
- 4,500-acre Phase I ESA for Wind Farm Construction; New Mexico
- Phase I ESA of Former Naval Depot for Redevelopment; Guam
- 86-mile Transmission Line Phase I ESA and Wetland Delineation; Florence, South Carolina
- Several Phase I ESA for Solar Development; California, Arizona, New Mexico, and Hawaii
- 950-acre Phase I ESA and Wetland Delineation; Fort Stewart, Georgia
- EBS for Wastewater Treatment Plant Improvements; Schofield Barracks U.S. Army Post, Honolulu, Hawaii

Mr. O'Brien is an Environmental Specialist in SWCA's Phoenix, Arizona office. He has 18 years of experience in environmental consulting and technical writing, including 15 years of extensive experience performing Phase I environmental site assessments (ESAs), and is an integral part of SWCA's NEPA team.

He has performed numerous ESAs in a variety of locations, from uninhabited deserts and mountains to dense metropolitan settings in 20 states and Guam, from tiny parcels to 600–square mile assemblages, including a U.S. Environmental Protection Agency (EPA) Superfund site and Department of Defense sites. He teaches others to conduct ESAs and has prepared and taught classroom and field sessions on ESA field and writing techniques. His specialties include performing FAA-Standard Phase I Environmental Due Diligence Audits (EDDAs) for airport projects and using ASTM Standard 2247-08 for large-scale projects. He is skilled in applying the principles of ESAs to Environmental Baseline Surveys (EBSs) for Department of Defense sites and classification of environmental condition of property area types. He manages the large and difficult Phase I ESAs for SWCA.

Mr. O'Brien is also experienced in performing soil mapping, wetland delineations, habitat assessments, permitting, protected species, and stream morphology assessments. He has delineated more than 40,000 acres of wetlands and has performed assessment, design, and construction oversight for more than 250 stream stabilization sites. He has completed M.A.-level coursework in soil characterization and hydric soils. He has extensive experience performing construction oversight and has experience training contractors, staff, and local officials.

Mr. O'Brien has extensive plant, soil, and hydrology fieldwork experience, in locations from coastal marshes to deserts to high in the Rocky Mountains. He has been 40-hour Hazardous Waste and Emergency Response (HAZWOPER)–certified since 1996. He earned a Watershed Training Certificate from the EPA, a Water Supply Watershed Protection certificate, and is a current member of the Arizona Association of Environmental Professionals and the Arizona Riparian Council.

Experience Summary

Ms. Rietz is a hydrologist and project manager in SWCA's Phoenix office, with experience in compliance with the National Environmental Policy Act (NEPA), Sections 402 and 404 of the Clean Water Act (CWA), and the Arizona Groundwater Code.

Ms. Rietz has developed scientific studies and prepared resource reports in support of environmental assessments (EAs), environmental impact statements (EISs), and stormwater pollution prevention plans (SWPPP) throughout the desert southwest, and Guam. Her experience also includes GIS analysis, vegetative mapping, and the use of programs such as THWELLS and Hydrologic Engineering Center software for ground and surface water modeling and floodplain mapping. Ms. Rietz has conducted sensitivity analysis on riparian restoration projects and is experienced in performing Phase I and II environmental site assessments (ESAs) in accordance with the American Society for Testing and Materials Standards for ESAs.

Selected Project Experience

Southline Transmission EIS; Las Cruces, New Mexico, to Tucson, Arizona; Southline Transmission LLC. SWCA serves as the third-party NEPA consultant to the BLM and the Western Area Power Administration (the co-lead federal agencies) and Southline Transmission LLC (the proponent). The project proposes more than 360 miles of new and rebuilt transmission line and will provide 1,000 megawatts of capacity in southern New Mexico and Arizona. SWCA is responsible for successfully coordinating with multiple agencies, consultants, and developers to ultimately compile a comprehensive and legally defensible EIS. *Role: Resource Coordinator. Manage data acquisition and coordinate resource reporting by various authors. Research and writing in support of EIS.*

Perrin Ranch; Coconino County, Arizona; NextEra Energy Resources, LLC. SWCA completed pre-construction surveys, permitting, and construction monitoring for installation of the 99-megawatt wind facility and post-construction monitoring studies as described in the Avian and Bat Protection Plan. *Role: Hydrologist. Conducted water resources analysis in support of the environmental assessment. Analyzed best management practices proposed for erosion control. Performed a phase I environmental site assessment on the private and state trust lands associated with the project.*

Phase I ESA for 30-acres at Apra Harbor; Piti, Guam; TG Engineers. SWCA performed a phase I environmental site assessment (ESA) and follow up mitigation plan for a commercial development of a 30-acre parcel at Polaris Point in Piti, Guam. *Role: Environmental Specialist, performed environmental record and historical aerial photography review, assessed the presence of recognized environmental conditions and formulated Phase II sampling plan to characterize contaminates at the site.*

This parcel is located in an area that may result in impacts to San Joaquin Kit Fox habitat. Therefore, the County worked with the California Department of Fish and Game to develop mitigation measures that will reduce impacts to San Joaquin Kit Fox habitat. These mitigation measures are described in the information brochure titled “A Guide to San Luis Obispo County San Joaquin Kit Fox Mitigation Procedures", and is available at our website, San Joaquin Kit Fox Mitigation

Your project may not be subject to Kit Fox mitigation requirements if it does not require grading on slopes greater than 10% or does not require a discretionary approval.

CONTACT INFORMATION
For questions about the County permitting process, please contact: Division of Environmental and Resource Management at (805) 781-5010

This parcel is subject to the Paso Robles Groundwater Basin Urgency Ordinance (Ord #3246). Please contact the Department of Planning and Building at (805)781-5600 for more information

This parcel is subject to the County-Wide Water Conservation Program (Title 19, effective 2015-11-26). Water offset clearances may be required for all construction permits. Please contact the Planning and Building Department for more information.

PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of March 11, 2015 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

To be determined

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

STEINBECK VINEYARDS #2, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY

The estate or interest in the land hereinafter described or referred to covered by this Report is:

Fee

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2015-2016, a lien not yet due or payable.

2. General and special taxes and assessments for the fiscal year 2014-2015.

First Installment:	$4,030.40, PAID
Penalty:	$0.00
Second Installment:	$4,030.40, OPEN
Penalty:	$0.00
Tax Rate Area:	104-001
A. P. No.:	015-053-011

3. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

4. An easement for county roads and incidental purposes, recorded April 10, 1888 in Book 1, Page 119; April 10, 1888 in Book 1, Page 123 and January 13, 1921 in Book 142, Page 434 all of Deeds.

In Favor of:	County of San Luis Obispo
Affects:	as described therein

5. An easement for public utilities and incidental purposes, recorded January 29, 1954 as Instrument No. 1339 in Book 743, Page 425 of Official Records.

In Favor of:	Pacific Gas and Electric Company, a California corporation
Affects:	as described therein

6. An easement for electric transmission lines, consisting of one or more lines of towers, poles, and/or other structures, avigation easement and incidental purposes, recorded January 21, 1969 as Book 1504, Page 505 of Official Records.

In Favor of:	Pacific Gas & Electric Company
Affects:	as described therein

7. An easement for public utilities and incidental purposes, recorded March 08, 1985 as Instrument No. 12395 in Book 2684, Page 498 of Official Records.

In Favor of:	Pacific Gas and Electric Company, a California corporation
Affects:	as described therein

8. Terms, provisions, covenants, restrictions and conditions contained in a document executed pursuant to the California Land Conservation Act of 1965 (Williamson Act) and recorded January 18, 1995 as Instrument No. 1995-002358 of Official Records.

   Document(s) declaring modifications thereof recorded February 23, 1995 as Instrument No. 1995-007743 of Official Records.

9. A deed of trust to secure an original indebtedness of $2,460,600.00 recorded June 11, 2008 as Instrument No. 2008030313 of Official Records.

Dated:	May 27, 2008
Trustor:	Steinbeck Vineyards #1, LLC, a California Limited Liability Company; and Harold E. Steinbeck and Beverly A. Steinbeck, Trustees of the Steinbeck Family Trust No. One U/T/D April 17, 1996
Trustee:	Farm Credit West, FLCA
Beneficiary:	Farm Credit West, FLCA

   The above deed of trust states that it secures a line of credit. Before the close of escrow, we require evidence satisfactory to us that (a) all checks, credit cards or other means of drawing upon the line of credit have been surrendered to escrow, (b) the borrower has not drawn upon the line of credit since the last transaction reflected in the lender's payoff demand, and (c) the borrower has in writing instructed the beneficiary to terminate the line of credit using such forms and following such procedures as may be required by the beneficiary.

Affects:	The land and other property.

10. An easement for public utilities and incidental purposes, recorded March 27, 2009 as Instrument No. 2009014890 of Official Records.

In Favor of:	Southern California Gas Company, a California corporation, its successors and assigns
Affects:	as described therein

11. A deed of trust to secure an original indebtedness of $1,800,000.00 recorded February 11, 2010 as Instrument No. 2010006768 of Official Records.

Dated:	February 01, 2010
Trustor:	Steinbeck Vineyards #2, LLC, a California Limited Liability Company
Trustee:	Farm Credit West, PCA
Beneficiary:	Farm Credit West, PCA

The above deed of trust states that it secures a line of credit. Before the close of escrow, we require evidence satisfactory to us that (a) all checks, credit cards or other means of drawing upon the line of credit have been surrendered to escrow, (b) the borrower has not drawn upon the line of credit since the last transaction reflected in the lender's payoff demand, and (c) the borrower has in writing instructed the beneficiary to terminate the line of credit using such forms and following such procedures as may be required by the beneficiary.

Affects: The land and other property.

12. An option in favor of Blue Heron Land Associates, LLC, a Delaware limited liability company as contained in or disclosed by a document recorded September 08, 2014 as Instrument No. 2014036645 of Official Records .

13. Rights of the public in and to that portion of the land lying within any road, street and/or highway.

14. Any discrepancies, conflicts in boundary lines, shortages in area, encroachments, facts, rights, interests or claims which would be disclosed by a correct ALTA/ACSM survey, and which are not shown by public records.

15. Any lien, or right to a lien, imposed by law, as a result of services, labor, and/or materials used, or to be used, for improvement to the premises.

16. Defects, liens, encumbrances, adverse claims or other matters, if any, created, first appearing in the public records, or attaching subsequent to the effective date hereof but prior to the date the proposed Insured acquires for value of record the estate or interest or mortgage thereon covered by this Report/Commitment.

17. Any and all minerals, and mineral rights, related to the land.

18. Water rights, claims or title to water, whether or not shown by the public records.

19. Rights of parties in possession.

INFORMATIONAL NOTES

NOTE to proposed insured lender only: No Private transfer fee covenant, as defined in Federal Housing Finance Agency Final Rule 12 CFR Part 1228, that was created and first appears in the Public Records on or after February 8, 2011, encumbers the Title except as follows: None

1. According to the latest available equalized assessment roll in the office of the county tax assessor, there is located on the land a(n) Multiple Family Residence known as 5410 Union Road, Paso Robles, CA.

2. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

   None

3. The policy contemplated by this report/commitment will not insure the title to any mobile home or manufactured home that may be located on the land. The Company will consider issuing such coverage only upon the customer's specific request.

4. This preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only. It is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.

5. Should this report be used to facilitate your transaction, we must be provided with the following prior to the issuance of the policy:

   A. WITH RESPECT TO A CORPORATION:
      1. A certificate of good standing of recent date issued by the Secretary of State of the corporation's state of domicile.
      2. A certificate copy of a resolution of the Board of Directors authorizing the contemplated transaction and designating which corporate officers shall have the power to execute on behalf of the corporation.
      3. Requirements which the Company may impose following its review of the above material and other information which the Company may require.
   B. WITH RESPECT TO A CALIFORNIA LIMITED PARTNERSHIP:
      1. A certified copy of the certificate of limited partnership (form LP-1) and any amendments thereto (form LP-2) to be recorded in the public records;
      2. A full copy of the partnership agreement and any amendments;
      3. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
      4. Requirements which the Company may impose following its review of the above material and other information which the Company may require.
   C. WITH RESPECT TO A FOREIGN LIMITED PARTNERSHIP:
      1. A certified copy of the application for registration, foreign limited partnership (form LP-5) and any amendments thereto (form LP-6) to be recorded in the public records;

2. A full copy of the partnership agreement and any amendment;
3. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
4. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

D. WITH RESPECT TO A GENERAL PARTNERSHIP:

1. A certified copy of a statement of partnership authority pursuant to Section 16303 of the California Corporation Code (form GP-I), executed by at least two partners, and a certified copy of any amendments to such statement (form GP-7), to be recorded in the public records;
2. A full copy of the partnership agreement and any amendments;
3. Requirements which the Company may impose following its review of the above material required herein and other information which the Company may require.

E. WITH RESPECT TO A LIMITED LIABILITY COMPANY:

1. A copy of its operating agreement and any amendments thereto;
2. If it is a California limited liability company, a certified copy of its articles of organization (LLC-1) and any certificate of correction (LLC-11), certificate of amendment (LLC-2), or restatement of articles of organization (LLC-10) to be recorded in the public records;
3. If it is a foreign limited liability company, a certified copy of its application for registration (LLC-5) to be recorded in the public records;
4. With respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the Company or upon which the Company is asked to rely, such document or instrument must be executed in accordance with one of the following, as appropriate:
   (i) If the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such documents must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;
   (ii) If the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.
5. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

F. WITH RESPECT TO A TRUST:

1. A certification pursuant to Section 18100.5 of the California Probate Code in a form satisfactory to the Company.
2. Copies of those excerpts from the original trust documents and amendments thereto which designate the trustee and confer upon the trustee the power to act in the pending transaction.
3. Other requirements which the Company may impose following its review of the material require herein and other information which the Company may require.

G. WITH RESPECT TO INDIVIDUALS:

1. A statement of information.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

APN: 015-053-011

The First American Corporation
First American Title Company
Privacy Policy

We Are Committed to Safeguarding Customer Information
In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability
This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values, a copy of which can be found on our website at www.firstam.com.

Types of Information
Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information
We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers
Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security
We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (02-03-10)

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   (a) building; (b) zoning; (c) land use; (d) improvements on the Land; (e) land division; and (f) environmental protection.

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   (a) that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   (b) that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   (c) that result in no loss to You; or
   (d) that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   (a) to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   (b) in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows: For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

Your Deductible Amount	**Our Maximum Dollar Limit of Liability**
Covered Risk 16: 1% of Policy Amount or $2,500.00 (whichever is less)	$10,000.00
Covered Risk 18: 1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 19: 1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 21: 1% of Policy Amount or $2,500.00 (whichever is less)	$5,000.00

ALTA RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   (a) and use
   (b) improvements on the land
   (c) and division
   (d) environmental protection

   This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.
   This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.
2. The right to take the land by condemning it, unless:
   (a) a notice of exercising the right appears in the public records on the Policy Date
   (b) the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking

3. Title Risks:
   (a) that are created, allowed, or agreed to by you
   (b) that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
   (c) that result in no loss to you
   (d) that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
4. Failure to pay value for your title.
5. Lack of a right:
   (a) to any land outside the area specifically described and referred to in Item 3 of Schedule A OR
   (b) in streets, alleys, or waterways that touch your land
   This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement erected on the Land;
   iii. the subdivision of land; or
   iv. environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   b. Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement erected on the Land;
   iii. the subdivision of land; or
   iv. environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   b.Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement erected on the Land;
   iii. the subdivision of land; or
   iv. environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

   b. Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters

   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Luis Obispo County, California, Paso Robles Area
Survey Area Data: Version 8, Sep 3, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 8, 2010—May 21, 2010

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

5410 UNION ROAD
PASO ROBLES, CA 93446

COORDINATES

Latitude (North):	35.6368940 - 35° 38' 12.81''
Longitude (West):	120.5996980 - 120° 35' 58.91''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	717346.6
UTM Y (Meters):	3946130.0
Elevation:	961 ft. above sea level

Target Property Map:	5603462 ESTRELLA, CA
Version Date:	2012
South Map:	5603458 CRESTON, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

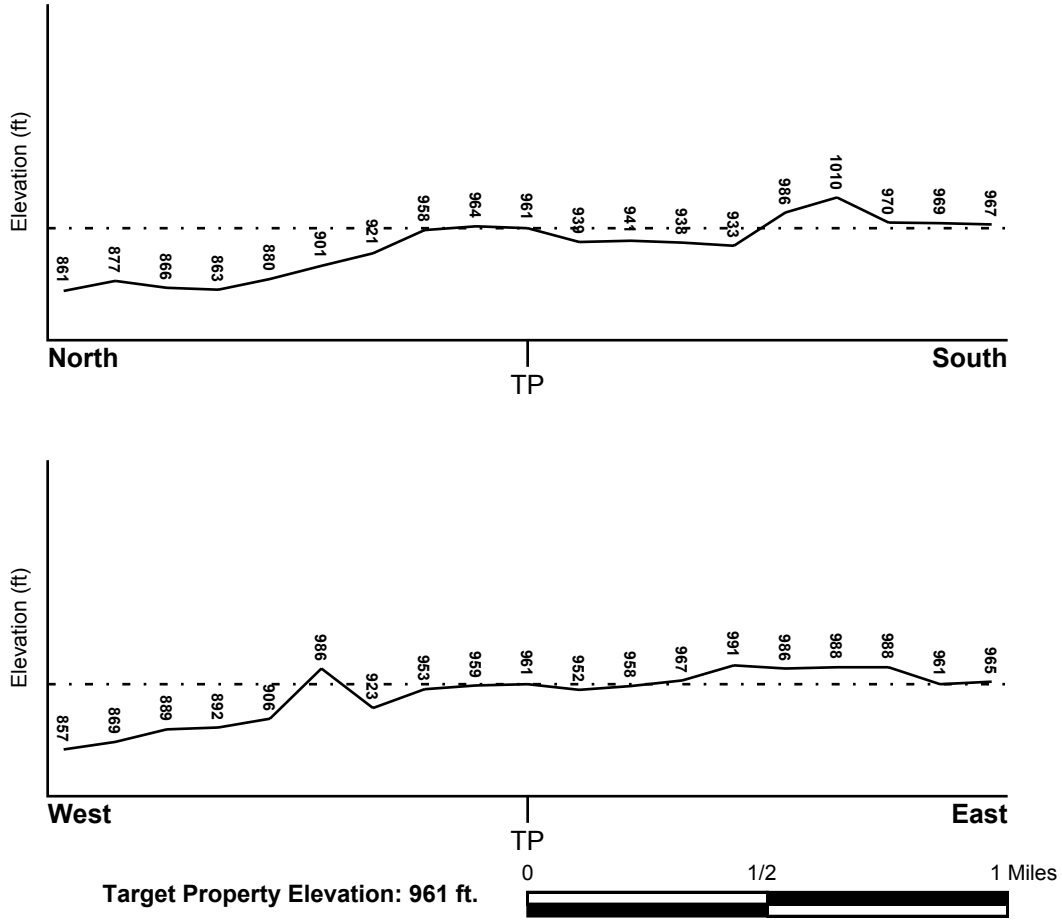
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN LUIS OBISPO, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06079C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Nacimiento

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	18 inches	27 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
3	27 inches	31 inches	weathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: Arbuckle

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	29 inches	53 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1
3	53 inches	61 inches	stratified sandy loam to very gravelly sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: Arbuckle

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SWCA Environmental Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Correspondence

This page intentionally left blank.

Interview with: Ryan Newkirk, Property Manager/Owner for Steinbeck winery/ vineyards.

Email: ryansv@live.com

Ryan Cell: 805-[redacted]
Office 805-[redacted]

Conducted on: May 12, 2016

Conducted by: Steve O'Brien, SWCA

Subject: Estrella Substation Project Phase I ESA

Notes:

I called Mr. Newkirk and spoke with him about the site:

- It has never been developed, never had a structure.
- Only past use he knows of is vacant land prior to vineyards.
- He is not aware of any potential contamination.
- Not aware of any leaks, spills, cleanups, or any issues related to potential soil and groundwater contamination.
- The well was installed around 2008. At that time the water was tested and had no issues.

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA)
***USER* QUESTIONNAIRE**

Completed by:
NextEra Energy Transmission West, LLC
700 Universe Boulevard
Juno Beach, Florida 33408

Date: April 27, 2016

Re: Phase I Environmental Site Assessment for the Proposed Estrella Substation Site

INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections (LLPs)* [1] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments")[2], the *user* must conduct the following inquires required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

The *user* is defined as "the party seeking to use Practice E1527 to complete an *environmental site assessment* of the *property*. A *user* may include, without limitation, a potential purchaser of *property*, a potential tenant of *property*, an owner of *property*, a lender, or a *property* manager. The *user* has specific obligations for completing a successful application of this practice outlined in Section 6" of ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

1) Environmental cleanup liens that are filed or recorded against the *property* (40 CFR 312.25) – Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed against the *property* under federal, tribal, state, or local law? ( ) Yes (**X**) No If yes, please describe:

Note 1 – In certain jurisdictions, federal, tribal, state, or local statuses, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

2) Activity and land use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi) – Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any Activity and Use Limitations (AULs), such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law? (**X**) Yes ( ) No. If yes, please describe: **Williamson Act Contract**

[1] *Landowner Liability Protections, or LLPs,* is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide*) issued on March 6, 2003.
[2] Public Law 107-118.

3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28) - Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? ( ) Yes (**X**) No If yes, please explain:

4) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29) – Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? (**X**) Yes ( ) No
If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ( ) Yes ( ) No If yes, please describe:

5) Commonly known or *reasonably ascertainable information about the property* (40 CFR 312.30) – Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

a. Do you know the past uses of the *property*? **Vineyard**

b. Do you know of specific chemicals that are present or once were present at the *property*? **No knowledge**

c. Do you know of spills or other chemical releases that have taken place at the *property*? **No knowledge**

d. Do you know of any environmental cleanups that have taken place at the *property*? **No knowledge**

e. Do you know of any previous Phase I Environmental Site Assessment performed for the *property*? ( ) Yes (**X**) No. If yes, can copies be provided?

f. If available, please provide contact information for someone knowledgeable about past uses of the *property* (present or past owner, operator or occupant).
Ryan NewKirk – Steinbeck Farming & Consulting
(805) 423-4965

6) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31) – Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*? ( ) Yes (**X**) No If yes, please describe:

Appendix E.
Property Photographs

This page intentionally left blank.

Photo 1: Typical view of vineyards on the subject property.

Photo 2: The interior of the subject property, with transmission lines in the background.

Photo 3: A well and tank in the west of the subject property.

Photo 4: This tank was observed next to the well.

Photo 5: Open water was present, but no petroleum or chemical staining was observed around the well.

Photo 6: This residence is located southwest of the subject property. The residence has a large water holding tank.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 7 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 27 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA-CESQG site within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 9 RCRA NonGen / NLR sites within the searched area.

US CDL: A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A review of the US CDL list, as provided by EDR, and dated 05/04/2016 has revealed that there are 2 US CDL sites within the searched area.

TSCA: The Toxic Substances Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. The United States Environmental Protection Agency has no current plan to update and/or re-issue this database.

A review of the TSCA list, as provided by EDR, and dated 12/31/2012 has revealed that there is 1 TSCA site within the searched area.

Site	Address	Map ID
ENVIROCHEM TECHNOLOG	2915 UNION ROAD SUIT	104-12

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 2 FTTS sites within the searched area.

Site	Address	Map ID
PASO AG CENTER, THE	HWY 46 E & GOLDEN HI	87-11,12
SALLY BEAUTY SUPPLY	***158 NUBLICK RD.***	***289-16***

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 HIST FTTS site within the searched area.

Site	Address	Map ID
SALLY BEAUTY SUPPLY	***158 NUBLICK RD.***	***289-16***

EXECUTIVE SUMMARY

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2009 has revealed that there are 3 SSTS sites within the searched area.

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 01/23/2015 has revealed that there is 1 ICIS site within the searched area.

Site	Address	Map ID
AIRGAS WEST INC.	***2131 GOLDEN HILL ROA***	***120-11,12***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/20/2015 has revealed that there are 91 FINDS sites within the searched area.

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 08/01/2015 has revealed that there are 3 RMP sites within the searched area.

EPA WATCH LIST: EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

A review of the EPA WATCH LIST list, as provided by EDR, and dated 08/30/2013 has revealed that there is 1 EPA WATCH LIST site within the searched area.

EXECUTIVE SUMMARY

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 233 CUPA Listings sites within the searched area.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2014 has revealed that there are 305 HAZNET sites within the searched area.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/02/2016 has revealed that there are 7 ENVIROSTOR sites within the searched area.

EDR PROPRIETARY RECORDS

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR

researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 69 EDR Hist Auto sites within the searched area.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 10 EDR Hist Cleaner sites within the searched area.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

WDS:

Facility ID:	Central Coastal 400105001
Facility Type:	Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities,

Map ID	Site	Database(s)	EPA ID Number

CITY OF PASO ROBLES WASTEWATER TREATMENT FACILITY (Continued) **1004443478**

	communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CA0047953 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	3
Facility Telephone:	8052373860
Facility Contact:	JOHN MCCARTHY
Agency Name:	PASO ROBLES CITY OF
Agency Address:	3200 SULPHUR SPRINGS RD
Agency City,St,Zip:	PASO ROBLES 93446
Agency Contact:	ED MOLDREN
Agency Telephone:	8052373865
Agency Type:	City
SIC Code:	4939
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	5
Baseline Flow:	3
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Registry ID: 110002775890

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
