

**A.13-09-014 SDG&E 1/20/15 Response
Salt Creek Substation Project PTC
ED-SDGE-019**

#	PEA Section/DR	Request	SDG&E Response
3	DR-17; Attachment 6	Update the visual simulation from KOP 7 (Hunte Parkway) and KOP 12b ¹ (SDG&E's transmission corridor east of the proposed substation) to include the proposed microwave dish and monopole.	<p>The visual simulations for KOP 7 and KOP12a were updated to include the proposed microwave dish and monopole, as well as changes in the grading of the access road. These simulations are provided in Attachment DR019.3-1. Due to consultant contract changes, a different simulation consultant revised these simulations. During revisions, discrepancies in the model and scale made the previously provided simulation 7 difficult to replicate. For this reason, KOP 7 was re-shot and the simulation revised.</p> <p>Similarly, the new simulation consultant did a review of previously prepared simulations and determined that simulations 8, 9, 11, and 12 should be re-taken and updated in order to provide high quality, replicable images. These simulations are in progress and are targeted to be provided by January 31, 2015.</p>
4	N/A	Provide additional simulations of the proposed project from cKOP B and cKOP C (shown on Attachment 1) representing views from the future University site and City of Chula Vista Greenbelt.	Provided in Attachment DR019.3-1.

¹ Please note, KOP 12b does not exist (and we believe it was just an inadvertent naming error), however, there is a 12a and we have referred to it as such in our response.
