| Cloud Cover (%): | 0% | 0% | |
| Precipitation Type (if any) and duration: | n/a | n/a | |

Habitat(s) and Vegetation Description within Survey Area:

- o Coastal sage scrub
- o Chaparral
- o Disturbed

Description of Survey Methodology:

The biologist conducted active and passive surveys within a survey buffer of 0.25 mile for white tailed kite, 500 feet for raptors, coastal California gnatcatcher, and least Bell's vireo, 250 feet for passerine birds in open space, and 150 feet for common passerines in residential, commercial and industrial areas. Active survey methods included walking meandering transects through the habitats while observing bird behavior with the aid of binoculars and directly searching in vegetation, the ground, the towers/poles, and other potential nest substrates. Passive survey methods included stationary observation periods from select vantage points that provided maximum visibility of the survey areas, using binoculars as necessary. If potential nesting behavior was observed within the survey buffers, specific shrubs were directly searched for nests in the areas where birds may have been observed exhibiting higher levels of activity or potential breeding behavior. All potential raptor nesting areas within the survey buffers were searched directly and/or with the aid of binoculars. Visibility, access, time of year and weather conditions were all conducive to collecting comprehensive breeding data, and ample time was spent surveying all potential nest sites.

| Suitable Raptor Nesting Habitat: | Yes: 🖂 | No: |
|----------------------------------|--------|-------|
| Suitable CAGN Nesting Habitat: | Yes: 🖂 | No: |
| Suitable LBV Nesting Habitat: | Yes: | No: 🖂 |
